You might as well go with XM, as they will wind up the winner anyway,
unless the sports coverage is a priority for you. XM's audio is
superior and their music is much better.

Hi I have a Kenwood TM-741A Tri-Band Mobile Radio

It Has The 144 mhz Module and the 440 mhz Module Installed..The 144 mhz
module is not functioning...The 440 mhz works fine and so does the rest of
the radio...complete with owner/ operator manual...

Make offer...

Carl

I know this is not 'radio', but if you need a 200amp, 240v, single phase
disconnect....These 2 are brand new in the box...
The model numbers are DTU224NRB made by Square D.
I am asking $250 ea....or best offer, plus shipping, and they each weight 66lbs.
If interested, please email: radiofreak@bellsouth.net

Hello,

I've created a discussion group (mailing list) to discuss high
fidelity AM tuners and hobbyist transmitters. Appended below is the
more detailed group description.

To subscribe to this group, either go to the group home page (at
Yahoo) and subscribe there (you will need a YahooID):

http://groups.yahoo.com/group/hifi-am/

Or, if you don't have a YahooID, send a blank email to:

hifi-am-subscribe@yahoogroups.com

Looking forward to seeing you there!

Jon Noring

****

Group Description for hifi-am:
==========

The purpose of hifi-am is to explore the possibilities of high fidelity AM tuners and hobbyist transmitters for medium-wave (or better known as the broadcast band, appr. 520 to 1720 khz.)

Although most commercial AM broadcasts are definitely not high fidelity (due to various factors including, in many countries, audio bandwidth restrictions), there are nevertheless a few commercial stations which broadcast with audio quality approaching high fidelity. For example, in Australia, because the number of stations is fewer and the country quite large, many stations broadcast with quite wide audio bandwidth, approaching 15 khz.

There is steady growth in interest (in the U.S.) for non-licensed hobbyist broadcasting in the BCB (per FCC "Part 15"), which is restricted to 100 milliwatts and a three meter antenna (among a few other minor restrictions). With a high efficiency antenna, it is possible for such neighborhood broadcasting to be heard about 1/2 to 1 mile from the transmitter. There are quite a few progressive and alternative stations broadcasting this way. For a wonderful example, see Radio KMTZ.

More importantly, it appears there is no specific restriction on audio bandwidth for Part 15 transmissions. Thus, if this is true, the broadcasts can approach high fidelity (15 to 20 khz audio bandwidth.)

Although discussion can focus on the general topic, it is hoped this group will catalyze the development of hobbyist kits for high fidelity AM tuners (digital, solid state, and tube) and for high fidelity low-power (Part 15) AM transmitters. It should be fun to consider the many possibilities.

You need a little common sense (if you have it) before posting anything
here. rec.photo newsgroups are the places to discuss anything related to
photography, but not political games or hatred rumors.

To All Readers:

DWM Communications website can be found here:

http://www.qth.com/dwm/

Enjoy the Tiny-Tenna and buying ANYTHING from DWM communications. Their
products themselves are great (and many say they are!), and DWM
communications is actually a fanstastic organization similar to the
C Crane & Universal. If you say something they like publicly, they
reward you with their free products, that's no lie! Their great to
your employers, and do everything they can to keep a good reputation.
Ask the folks in rec.radio.shortwave.

Take a look at the spamming going on in rec.radio.shortwave. All of it
is originating from people pretending to be DWM communication staff.
They are currently attempting to disrupt and destroy many
radio-related newsgroups through repeated, malicious spamming. Please
remember, these people are NOT DWM Communications!

The president of the company, Bill Lauterbach, entered r.r.s. and is
one of the nicest peersons you'l ever want to meet. He has a prupose
and is an asset to the group.

If you give your personal information to DWM Communications, Inc. they
don not place it in any computer system. And they will not give any
info to others! This company (that makes the "Tiny-Tenna") is GREAT TO
BUY FROM, and if you buy
from them you are only risking a great product at only a little money.
Buying from them gives you sanity and peace of mind as well!

You should note that this company also advertises freely on radio
stations that promote good Christian programming material and carry
such
programming. This makes the company a good organization, and if you
buy from them you are supporting good causes.

The "Tiny-Tenna" product is simple, worth all of parts and not
everyone
could build themselves, no even a child. Yet they ONLY charge $19.95
for it,
making probably little markup.

Take this as a warning, and ALWAYS buy everything from DWM.

DWM's website can be found here:

http://www.qth.com/dwm/

Their phone number is 1-517-563-2613

Their address is: P.O. Box 87-W, Hanover, MI 49241

DO ORDER FROM THIS COMPANY!! You will be risking little, and it is
worth it! Keep your sanity, your peace of mind and your money, and
order from this company first!

If you are wise, please contact the company and let them know how you
feel about the spamming going on by people who are pretending to be
them. And above all, avoid ordering from other company's at all costs!
It will be the biggest mistake you have ever made in your life!!!
Order from DWM. They are great!

Reuters
Clear Channel makes peace with antiwar billboards
Thursday July 15, 7:32 pm ET
By Gail Appleson

NEW YORK, July 15 (Reuters) - Clear Channel Communications
(NYSE:CCU - News) made peace on Thursday with a public
interest group that sued the media giant for breaking a
contract over posting an antiwar billboard in Times Square
during the Republican National Convention.

Clear Channel settled the suit by agreeing to give Project
Billboard two different prime Times Square locations instead
of just one. In return, the group will drop its plan for a
bomb graphic that Clear Channel found distasteful.

Project Billboard, which had a $368,000 contract for a billboard on the Marriott Marquis Hotel, sued Clear Channel's Spectacolor unit on Monday after it refused to post the antiwar message. Clear Channel said Marriott prohibits political advertising on its billboard.

Under the deal, Project Billboard can run its original text "Democracy is best taught by example, not by war," on both billboards but will not use a drawing of a bomb with lighted fuse decorated in Stars and Stripes.

Instead, one of the locations, a wrap-around billboard on the Conde Nast building on 42nd Street, will picture a stylized peace dove. The other location, a vertical billboard on the W Hotel at 47th Street, will display constantly updated figures representing "the total cost of Iraq War."

"These two new prominent locations will showcase our messages in the busiest intersection in America," said Deborah Rappaport, a Project Billboard board member. "We are impressed with the options Spectacolor presented to us and appreciate their cooperation and flexibility."

During a court hearing on Wednesday, Clear Channel's lawyer said the company had concerns that the bomb image would offend New Yorkers who lived through the Sept. 11, 2001 attack on the World Trade Center.

The billboard with the dove will be displayed during August when the Republican National Convention meets in New York, and again from October through Nov. 2. The vertical billboard will be displayed for two days of the convention and during September and October.

"We are happy to help Project Billboard get their message to the more than 1.5 million people who pass through Times Square each day," said Paul Meyer, President and Chief Executive Officer of Clear Channel Outdoor.

Beware of these e-mails, ALSO, the same thing is being done for PAYPAL!!
BOTH Ebay and Paypal will NEVER ask you for this information via e-mail.
If you respond to them, they look EXACTLY like Ebay and Paypal.
I would not even respond to it. Just forward them to spoof@ebay.com
and I believe the other is spoof@paypal.com.
If you click on the link given by them you can "sign in" with bogus username and
passwords.
BEWARE!!!!
You folks might want to pass this around to everyone and list it in other
groups.

Actually they will not when you look closely. Any form legitimately
requesting sensitive personal data will via a 128-bit, encrypted,
secure link, NOT email, and SCAM ARTISTS are incapable of duplicating
these. (Email is not secure.)

Both Explorer and Netscape contain icons at the bottom of the browser

window to show when such a secure link has been established and in effect with your computer, and both allow you to check the security level established, and inspect their certification credentials (the security Certificate that they hold) for authenticity.

Normally eBay and Paypal go through this ritual only when you are first open your account and is required.

You'll see the identical security measured being taken when doing online business with any reputable dealer when credit card number are needed, and also when you access your "On-Line Banking" with Bankamerica, Fleet, Citicorp, and Chase Bank. In fact, you won't even be asked to enter your password or PIN number except via a secure, encrypted link.

Harry C.

Even before Bush attacked Howard with his FCC pitbull and Clear Channel poodle, the vote was swinging:

Sun, Jan. 11, 2004

Rush's 'fans' say loyalty has limits

CARL HIAASEN

Dear Mr. Limbaugh,

As president-elect of our local Rush Limbaugh Fan Club, I've

been deputized to write this letter regarding your recent legal problems.

Here in Gopher County some of your loyal followers are upset about what they've been reading and hearing in the media, which (as we all know) is run by a bunch of liberal pansies (except for your radio show, of course!).

Anyhow, we were all real sorry to learn about you being a dope addict. Naturally we didn't believe a word of the story until it came from your own lips.

Seeing how you've been so hard-core against drug users on your radio show -- saying that they ought to be locked up with murderers and rapists -- it must've been hard on you to sneak around all those years, pretending like you were some straight-up, sober citizen.

According to Palm Beach prosecutors, in only six months you got about 2,000 painkiller pills from pharmacies in your neighborhood (and that's not including what you scored on the sly from your maid).

When you do the arithmetic, that works out to at least 11 hits of opiate-based analgesics a day -- enough to put any lily-livered liberal in the emergency room, yet it didn't even slow you down!

Speaking on behalf of your devoted radio listeners, most of us never suspected that you were ripped to the gills. You always made perfect sense to us.

Still, we were sympathetic when you explained that you'd been popping pills because your back was hurting and then your eardrums were hurting, and I forget what else was hurting.

Hey, it's a hard job, sitting in front of that microphone. You don't get much exercise, except for the jaw muscles.

Admittedly, we got worried when you went into rehab, since the concept was pretty much invented by mushy-hearted liberals who wanted to help drug users instead of punish them. Thank goodness you were still a die-hard conservative when you came out!

But that, Mr. Limbaugh, is when the trouble began.

The authorities in Palm Beach have been investigating a drug ring that allegedly supplied some of your pain pills. However, instead of cooperating with law-enforcement officials, you've recently instructed your attorney to stonewall.

To those who have followed you faithfully, it's mighty confusing. You've always said that you were pro law-and-order, ranting about criminal suspects who complained that their constitutional rights were being violated.

Yet that's exactly what you're doing now, and you haven't even been charged with anything.

Prosecutors want your medical records in order to make sure you didn't scam overlapping prescriptions from different doctors, which is illegal. You say the state attorney's request is an invasion of privacy, and you want the medical files sealed permanently.

It sure is strange to hear you talk about privacy as something so important. Remember all the laughs you got out of Monica Lewinsky's situation?

Imagine what would've happened if the special prosecutors had listened to her pleas for privacy. There would have been no impeachment of Bill Clinton, and America would have been deprived of hours of your laser wit and acid commentary.

Speaking of Ken Starr, why didn't you hire him to be your defense lawyer? A solidly upright, uptight ultraconservative. This Roy Black fellow might be one of the country's best trial attorneys, but are you aware that he has represented murderers, thieves, drug kingpins and -- worst of all -- one of the Kennedys! You can't get more liberal than that.

Now, you and Mr. Black claim that the authorities in Palm Beach are persecuting you because of your political beliefs.

''The Democrats still cannot defeat me in the arena of political ideas,'' you said on your radio show. ``And so now they are trying to do so in the court of public opinion and the legal system.''

Whoa.

Even for the most dedicated Limbaugh listeners (and here in Gopher County we've been steadfast), this is too much to swallow.

All of a sudden you're the innocent victim of a vast, nefarious political conspiracy -- for God's sake, you sound just like Hillary!

Next thing we know, you'll be telling us that Dick Gephardt spiked your Lipitors with Xanax. Or that Howard Dean got you hooked on those OxyContins (he is a doctor, right?)

Please, Rush, don't go down this slippery slope. With every

passing day you act more like the ''whiny wimps'' you've been
ridiculing all these years.

Here in the land of the right-wing and the righteous, we're
loyal but we have our limits.

We can forgive you for being a pillhead -- but never for
being a liberal.

Don't be so sure.....

check out
http://www.antiphishing.org/
and go down the page 1/2 way to "Recent Phishing Attacks". The financial
industry is seeing about 1 to 2 really good attempts at this every single
day. And you can be certain, these guys are gettting really good. While most
are not using the 128 bit encryption, some are.

Mike, I stand by what I previously posted.

I suggest that you go back and more carefully re-read it before
dismissing it's factual content.

Learn what a secure link is, and how its use is indicated on your web
browser screen.

Learn how to check the seurity level of the link, read its
Certificate, see which security firm issued the certificate, its
expiration date, etc.

Every single one of the "Recent Phishing Attacks" that are cited
represent rather crude email bait, some leading to a non-secured,
non-encrypted, and obviously scam URL that aim to fool only the most
naive and inexperienced net users who evidently never bother to employ
common sense

Of course it's precisely these net ignorant users that are the targets
of the scammers, and nothing except learning how to employ the
security measures alrady existing on the web is going to protect them

from really stupid acts based total upon their own to learn how the system operates prior to using it.

It's very similar to the confidence artists of current and earlier generations who relied on the ignorance and/or greed of their victims for success in perpetrating their scams. All scams that I have seen rely on one or the other of these factors being present in order to rip someone off of something. On top of that, these scammers justify their actions as an educational exercise of value to their victim, which in many cases it certainly is.

Harry C.

p.s. When bidding on eBay, there are a number of measures that you can employ to protect yourself from being scammer. Always carefully check the sellers feedback and how long he has been a member of eBay. Be wary of "Power Sellers" since these are usually firms that market mass volumes of usually "distressed" merchandise. Be particularly wary of sellers having zero feedback, particularly if they have been a member of eBay for less than a month or two. (Prior to bidding, communicate with these new sellers by email and learn what their story is, realizing that someone selling on eBay has to start somewhere. Still, it's most unusual to find a seller on eBay that has not accumulated some level of positive feedback previously as a buyer. It should be regarded as suspicious when that is not the case.)

To All Readers:

DWM Communication website can be found here:

http://www.qth.com/dwm/

Enjoy the Tiny-Tenna and buying ANYTHING from DWM communications. Their products themselves are great (and many say they are!), and DWM communication is actually a fanstastic organization similar to the Universalradio. If you say something they like publicly, they reward you with their free products, that's no lie! Their great to your employers, and do everything they can to keep a good reputation. Ask the folks in rec.radio.shortwave.

Take a look at the spamming going on in rec.radio.shortwave. All of it is originating from others and being FOUGHT by DWM communication staff. They are currently attempting to disrupt and destroy many radio-related newsgroups SPAMMERS, and their repeated, malicious spamming. Please remember, DWM Communications fights the rec.radio.shortwave spammers!

The president of the company, Bill Lauterbach, entered r.r.s. and is one of the nicest peersons you'l ever want to meet. He has a purpose in r.r.s. and is an asset to the group.

If you give your personal information to DWM Communications, Inc. they do not place it in any computer system. And they will not give any info to mailing lists! This company (that makes the "Tiny-Tenna") is GREAT TO BUY FROM, and if you buy from them you are only risking a great product at only a little money. Buying from them gives you sanity and peace of mind as well!

You should note that this company also advertises freely on radio stations that promote good Christian programming material and carry such programming. This makes the company a good organization, and if you
buy from them you are supporting good causes.

The "Tiny-Tenna" product is simple, worth all of parts and not everyone could build themselves, not even a child. Yet they ONLY charge $19.95 for it, making probably little markup.

Take this as a warning, and ALWAYS buy everything from DWM.

DWM's website can be found here:

http://www.qth.com/dwm/

Their phone number is 1-517-563-2613

Their address is: P.O. Box 87-W, Hanover, MI 49241

DO ORDER FROM THIS COMPANY!! You will be risking little, and it is worth it! Keep your sanity, your peace of mind and your money, and order from this company first!

If you are wise, please contact the company and let them know how you feel about the spamming going on by people in rec.radio.shortwave and how you appreciate DWM Communications fighting against the spammers!

And above all, avoid ordering from other company's at all costs!
It will be the biggest mistake you have ever made in your life!!!
Order from DWM. They are great!

Sent via Deja.com http://www.deja.com/
Before you buy.

Ahh, the Ebay Guild is born! Only buy off good established sellers.
Those new ones are gonna scam ya.

Mybe that's a good idea. The established sellers can band together to
keep new people out.

> Ahh, the Ebay Guild is born! Only buy off good established sellers.
> Those new ones are gonna scam ya.

Mike, that's a pretty bizarre interpretation of what I posted. I was
simply sharing my experience gained though something like 5 years of
buying and selling on eBay with the newcomers.

If you want to purchase a "pig in a poke" from a seller with zero
feedback it's certainly your option to do so and eBay or its
established sellers can do nothing to prevent you from doing so. Then
too, if a seller has zero feedback most people would consider it
prudent to contact the seller by email and determine the facts of the
situation.

I personally purchased a HP LJ4+ laser printer from a seller on eBay
with zero feedback, but only after an email conversation with him
(since this was an over $100 item plus signigicant shipping expense).
In fact, I was the very first to provide him with positive feedback.

Realize the facts. On eBay, the majority of fraud stems from sellers
with zero feedback offering highly underpriced popular items who
insist on payment by a money order (which once cashed is essentially
untraceable). Be afraid when you run into this pattern...be very
afraid!

Be aware of the importance of feedback on eBay, because like a D&B
report, it paints a picture of the seller's or buyer's past history
and performance. Without reading it, you are flying blind!

If you check out my feedback on eBay, you'll learn that since Feb 15,

1999, I've accumulated a total of 313 postive feedbacks (a score of 223 positives since repeat purchase or sales to the same person don't count), plus one neutral from a woman who praised my packing and fast shipping, but claimed that the sealed-in-box antique Cabbage Patch Doll that I sold here "smelled like smoke". Just for the record, the majority of my feedback score stems from items that I have purchased over the years, since I've been only selling since the beginning of the year (roughly 25 items so far this year).

As a seller, I make it a practice to try and ship out an item the day after the auction ends, provided he/she (the buyer) has substantial positive feedback and no negatives even though I have not yet received payment. (I haven't been burned by anyone yet!) Obviously if I received immediate Paypal payment I ship on the next business day, regardless of the buyer's feedback.

Frankly speaking, on eBay the more new sellers the better, because it expands both the quantity and variety of items being offered for sale.

> Mybe that's a good idea. The established sellers can band together to
> keep new people out.

Are you normally a believer in conspiracy theories? :-) As a new seller, I can't imagine how such a thing could even be done, or any reason that anyone would want to! I sell collectable, antique computer game software, ham radio and research components, radiation detection equipment, technical items, etc. Who would it possibly benefit to keep any of my items from being listed on eBay, and sold on eBay as most of them are?

Think about it.

Harry C.

To All Readers:

DWM Communications website can be found here:

http://www.qth.com/dwm/

Enjoy the Tiny-Tenna and buying ANYTHING from DWM communications. Their products are GREAT (and many say they are!), and DWM communications is actually a fanstastic organization similar to the Scientists. If you say something they like publicly, they reward you with their free products, that's no lie! Their great to their employees, and do everything they can to keep a good reputation. Ask the folks in rec.radio.shortwave.

Take a look at the spamming going on in rec.radio.shortwave. All of it is originating from the competitors of DWM Communications and is being FOUGHT by DWM communication staffers. These spammers are currently attempting to disrupt and destroy many radio-related newsgroups SPAMMERS, with their repeated, malicious spamming. Please remember, DWM Communications fights the
rec.radio.shortwave spammers!

The president of the company, Bill Lauterbach, entered r.r.s. and is one of the nicest persons you'll ever want to meet. He has a purpose in r.r.s. and is an asset to the group. He is fighting the good fight against these amlicious spammers!

If you give your personal information to DWM Communications, Inc. they do not place it in any computer system. And they will not give any info to mailing lists! This company (that makes the "Tiny-Tenna") is GREAT TO BUY FROM, and if you buy from them you are purchasing a great product at only a little money. Buying from them gives you sanity and peace of mind as well!

You should note that this company also advertises freely on radio stations that promote good comedy and music programming material and carry
such programming. This makes the company one of good character, and if you buy from them you are supporting moral causes.

The "Tiny-Tenna" product is simple, worth all of parts and not everyone could build themselves, especially a child. Yet they ONLY charge $19.95 for it, probably making very little on the markup.

Take this as a warning, and NEVER buy from others! Buy from DWM Communications!

DWM's website can be found here:

http://www.qth.com/dwm/

Their phone number is 1-517-563-2613

Their address is: P.O. Box 87-W, Hanover, MI 49241

DO ORDER FROM THIS COMPANY!! You will be risking nothing, and it is
worth it! Keep your sanity, your peace of mind and save money, and
order from DWM first!

If you are wise, please contact the company and let them know how you
feel about the spamming going on by people in rec.radio.shortwave and
how you appreciate DWM Communications fighting against those awful
spammers!
And above all, avoid ordering from other company's at all costs!
It will be the biggest mistake you have ever made in your life!!!
Order from DWM. They are great!

Sent via Deja.com http://www.deja.com/
Before you buy.

Low-power blues

New community radio stations finally power up around Sacramento

By Cosmo Garvin

Photo By Larry Dalton

Bill Boyer worked for four years to bring a low-power FM radio station to Sacramento.

Bill Boyer looked as though he might levitate when he shouted along with the CD track he'd just cued up.

"Bid 'em in. Bid 'em in!" It was a recreation of an actual slave-auctioneer's call, recorded by black poet and singer Oscar Brown Jr. in 1960:

She's full up front and ample behind.
Take a look at her teeth if you've got a mind.
Bid 'em in. Get 'em in.

As Boyer yelled the line, he scrunched up his face in an expression that was part fierce anger and part enjoyment at the look of surprise and consternation on the face of his guest, the reporter.

"That's what I'm going to use to start the show," Boyer explained, cueing up another track, one of his favorite versions of what he calls the "black national anthem," "Lift Every Voice and Sing."

These two tracks are just a small sampling of what Boyer hopes to hear soon on a new low-power community radio station that he has worked for four years to create.

"It's going to be real black radio," he said. "None of this R. Kelly stuff. But James Brown and gospel music and real community news and politics."

The station is KDEE-LP, at 97.7 FM. When it goes on the air--if it goes on the air--in October, it will be the first in Sacramento of a new class of 100-watt community radio stations authorized by the Federal Communications Commission (FCC) more than four years ago.

Another low-power station, KDRT, 101.5 FM, is scheduled to go on the air in Davis in September. Both are scrambling to get their stations constructed and on the air before their respective deadlines this fall.

Both are the result of four years of work by local media activists,

often frustrated by the changing rules of low-power radio, and the politics of media ownership.

As each station attempts to power up, those politics are making headlines again. On July 21, the FCC held a day-long hearing on "localism" and media ownership in Monterey.

At the same time, the U.S. Senate is taking up legislation that could help create more low-power stations like KDRT and KDEE.

"I think there's about to be an earthquake shift in media ownership and distribution," Boyer said. And if he has his way, he'll be one of its epicenters, shouting "Bid 'em in" into his microphone.

In January 2000, the FCC established new rules allowing licenses for local community radio stations broadcasting at up to 100 watts of power. The Low Power FM (LPFM) Service, as it is called today, was advocated by then-FCC Chairman William Kennard, a Clinton appointee and Michael Powell's predecessor. Kennard pushed the new rules partly in response to the explosive growth of media conglomerates like Clear Channel, which, thanks to the loosening media consolidation under the Telecommunications Act of 1996, were buying up hundreds of local radio stations. Low-power stations were intended to replace some small part of the localism and community service that was being lost in the era of corporate media consolidation.

At the same time, the FCC had its hands full trying to shut down so-called pirate radio stations run by media activists who practiced civil disobedience of the airwaves.

More than 3,000 organizations applied for new LPFM licenses when they were made available in 2000. During that time, nine different groups applied for a single frequency that had opened up in Sacramento. These included church groups; Sutter Middle School; Boyer; and Access Sacramento, the community-access cable station.

But before the applications could even be processed, the rules suddenly changed. In December 2000, Congress--under pressure from the broadcast industry group the National Association of Broadcasters (NAB) and the giant public-radio network National Public Radio (NPR)--passed the Radio Broadcast Preservation Act of 2000.

"They should have called it the Broadcast Industry Preservation Act," remarked Shane Carpenter, who coordinates radio programs for Access Sacramento, one of the original applicants for an LPFM license in Sacramento. (Access Sacramento currently provides radio programming, including Berkeley station KPFA, on the second audio channels of its two cable channels.)

The NAB and NPR both complained that the low-power rules would allow new low-power stations to interfere with existing normal power stations. To address their concerns, Congress passed a new rule that required any prospective low-power station to have three empty

channels on either side of the frequency on which it wanted to broadcast. If you wanted to broadcast at 97.7, then 97.5, 97.3 and 97.1 on one side, and 97.9, 98.1 and 98.3, all would have to be empty. The old rules only required two empty channels on either side of the frequency.

The upshot was that hundreds of potential community broadcasters, including those vying for a low-power station in Sacramento, suddenly found that the frequencies they had applied for were now unavailable.

Of the original group that applied, only Boyer persevered. "Everybody else walked away," explained Boyer, a retired horse trainer who lives in Colonial Heights. He, on the other hand, spent $6,000 of his own money hiring broadcast-engineering consultants to find a frequency that worked within the new rules. It wasn't easy to find one.

"The spectrum is sliced up so thin. If it was bologna, you could see through it," he said.

But Boyer finally did find a slice, at 97.7 FM. If all goes well, the new signal would cover the Greenback area, taking in Del Paso Heights, North Highlands, Midtown and parts of Rancho Cordova and Oak Park.

The Davis group was luckier. The frequency that Jeff Shaw applied for, on behalf of Davis Community Television, was not affected by the more restrictive rules that affected Sacramento. Still, after years of waiting ("Things slowed down quite a bit when Powell was appointed," Shaw explained), KDRT volunteers now have to scramble to raise money, buy equipment, learn how to use it and actually build the studio inside the DCTV building in Davis.

"Yeah, we are sweating it a bit," Shaw said.

Shaw said he believes the station will cover the entire city of Davis, along with Woodland, Dixon and part of West Sacramento. The station could play music, but he hopes it will focus on local public-affairs programming.

"We need to reclaim at least a bit of the airwaves. There's a real dearth of local programming on the radio these days," Shaw said.

On August 4, at 6 p.m., KDRT will hold a community meeting aimed at getting input from volunteers and to help raise money to build the station. The meeting will be at the Hattie Webber Museum in Davis' Central Park.

Shaw said more than 50 people have volunteered already to produce programs, and though he expects none of them will be as slick as the commercial stations', he hopes KDRT will help restore the role local radio used to play in communities across the country.

"I don't usually go past about 92 on the dial," said Shaw. "I'd just rather hear real people on the radio. And I think once people start

hearing their friends and themselves on the radio, they will rediscover its value."

Though KDRT and KDEE are the first stations in the Sacramento area created under the low-power radio rules, Shaw hopes they won't be the only ones.

U.S Senators John McCain and Patrick Leahy have introduced a bill, Senate Bill 2505, that would, in McCain's words, "right a serious wrong" done by NAB and NPR. McCain called the claims of interference "grossly exaggerated" as he introduced the bill. The new rule would remove the restrictions placed on the radio spectrum by the Radio Broadcast Preservation Act of 2000. That could open up thousands of new frequencies across the country. But its impact on Sacramento is harder to gauge.

It is clear that most of the new stations would go to rural areas, where the radio spectrum is less crowded, and not to urban areas, where the demand actually may be greater.

"If you live in Arbuckle or Nicholas or some other place where much of the population is bovine, it will help a lot," said Boyer of the McCain legislation.

"But you can hunt downtown Sacramento until the cows come home, and you will not find one bit of frequency that has not already been divided up."

Photo By Larry Dalton

Bill Boyer in the home studio he built in Colonial Heights. He's not sure if he'll even be on the air when KDEE, 97.7 FM, powers up this fall.

Chip Morgan, with Broadcast Systems--one of the consultants that helped Boyer find 97.7--said the new rules might create one or two or possibly three new frequencies in the Sacramento area, but the trick is in finding them.

"Joe Blow with a slide rule and some maps can go out there and try to figure it out. But it's really very complicated," he said.

Ron Cooper, director of Access Sacramento, said he supports the McCain legislation and hopes that his organization will get an LPFM license someday. But he said the low-power rules just scratch the surface of the media-ownership problem.

"This whole issue of localism is really about having a diversity of voices in the media. And the model of corporate media ownership has really reduced that diversity," Cooper said.

Many of these issues were heard by the FCC commissioners during the hearing on "localism" in Monterey earlier this week.

That hearing, and others like it around the nation, grew out of public anger at an attempt by Powell, the FCC chairman, to loosen media-ownership rules even further.

Low-power stations, said Cooper, provide some political cover to Powell and others who want to show that localism and diversity are being addressed while they avoid more-fundamental media reforms.

"It's kind of a shell game, isn't it?" mused Cooper. Still, he'll take what he can get. "If there comes a time when there are two, six, even 10 low-power community stations in Sacramento, I'll have less to complain about," he said.

Boyer, too, will take what he can get. But having secured the license and even built his own studio in his garage, the truth is that KDEE is now mostly out of Boyer's hands. Under the current low-power rules, individuals aren't allowed to hold these licenses. Boyer handed the license over to the California Black Chamber of Commerce, which is now responsible for KDEE.

When he spoke with SN&R, Boyer said he had seen little activity by the chamber to get KDEE built. The chamber's director, Aubry Stone, said much work remained to get the station up and running. "Of course, I worry. It's my job to worry," Stone explained, but he added he was confident the station would be on the air by October. As for Boyer, it's not clear at all what his role in the new station will be. He wonders if his outspoken and radical politics will clash with what he perceives as the more genteel sensibility of the chamber.

"You know," Boyer reflected, "I don't know if they are actually going to let a radical nigger like me on the radio."

Regards,
Paul Kekai Manansala

u can get modules for RF data transmission from Infotech Resources.
the modules they have use nordic IC. u can write to them at
itresources@vsnl.com and get more info.

In light of today's court ruling convicting ten Arutz-7 directors and staff members of broadcasting without a license, Arutz-7 stopped its radio broadcasts at 5 PM this afternoon. It issued the following message to its "precious and loyal listening public:"

"To the precious and loyal listening public of Arutz-7, may G-d bless you from Zion.

"For some 15 years, Arutz-7 has broadcast Torah lessons and love of the People and the Land, with the participation of the leaders of Israel. The broadcasts accompanied and aided in the development of Torah in Israel and settlement of the Land.

"Following the decision of the Likud Government of yesterday to prevent advertising on non-licensed stations, and following today's court decision, the management of Arutz-7 has decided to stop all broadcasts on the radio, beginning at 5 PM this evening (10 AM Eastern Standard Time).

"The broadcasts will continue as usual on the internet (www.IsraelNN.com or www.a7.org) and by phone - 057-777-777 [from abroad: +97257-777-777].

"Peace upon all."

This afternoon's ruling by the Jerusalem Magistrates Court convicted ten Arutz-7 directors and staff members of broadcasting without a license. The trial, which began over four and a half years ago, resulted in a flat-out conviction of the ten for having broadcasted from within the territorial waters of Israel, using transmitters within Israel without proper licensing, and similar charges.

Arutz-7 Executive Director Yaakov Katz (Ketzaleh), convicted of issuing false affidavits regarding the distance of the ship from shore, said when the trial started that the State Prosecution operated under a double standard: "It never indicted Abie Nathan for broadcasting from the sea - but a week after he sank his ship, all the troubles for Arutz-7 started."

Today's ruling by Justice Yoram Noam stated that the defendants had violated broadcast and telegraph laws. Yoel Tzur, one of the convicts, speaking from the courtroom shortly after the verdict was announced, said that the first stage is to study the ruling, and that "we will make every effort to continue Arutz-7's broadcasts."

The sentences - a maximum of three-year jail terms and three-million shekel fines - will be handed down next month. The Arutz-7 personnel who face these punishments are:

* Rabbi Zalman Baruch Melamed, Rabbi of Beit El since its inception in 1977, Dean of Yeshivat Beit El and Beit El Yeshiva Center Institutions, leading member of the Yesha Council of Rabbis, and co-founder of Arutz-7;

* His wife Shulamit Melamed, long-time educational counselor at Tzviya Girls High School, co-founder of Arutz-7, and programming director and station manager;

* Yaakov Katz, known as Ketzaleh, indefatigable Executive-Director of Arutz-7 and Beit El Yeshiva Center Institutions, wounded as an IDF officer during the Yom Kippur War and bound to a wheelchair for months afterwards, founding member of the community of Beit El;

* Yoel Tzur, Director of Arutz-7, IDF battalion commander in reserves, founding member of the community of Beit El, lost his wife and son in terrorist attack in 1996;

* Haggai Segal, Arutz-7 News Director, activist on behalf of the Jewish population in Yesha and author of several books on the history of modern

settlement in Yesha;

* Adir Zik, veteran fiery nationalist broadcaster;

* Gidi Sharon, veteran music broadcaster, considered one of those responsible for the revival of Sephardic (Jewish-Mideastern) music in Israel;

* David Shapira, broadcaster and director of Arutz-7's French department;

* Ya'ir Meir, engineer; and

* Sha'ul Avni, captain of Arutz-7's Eretz HaTzvi ship.

"Free the airwaves"
http://www.jpost.com/servlet/Satellite?pagename=JPost/JPArticle/
Printer&cid=1066715115041
Oct. 22, 2003

Earlier this week Arutz Sheva was finally felled. It was defeated via a lawsuit submitted by Labor's Eitan Cabel to the Jerusalem Magistrate's Court, which upheld his assertion that it was broadcasting illegally.

Yet two decades ago Israel's Left mounted an aggressive campaign, both within and without the Knesset, to legalize Abie Nathan's Voice of Peace shipboard radio broadcasts.

The argument was that Nathan proved his enterprise a commercial success, had an audience and several years in the business. He deserved, it was ardently argued, special consideration. It would have doubtlessly been granted, had Nathan not succumbed meanwhile to severe medical and financial problems.

But the very same arguments raised in his favor are even more cogent for Arutz Sheva, which alone gives voice to settlers and their supporters. Without Arutz Sheva, that portion of the population popularly dubbed "the national camp" is effectively silenced. This station fills a niche and a need, which no other does, far beyond anything that Nathan could remotely claim.

So it's no less than dismaying that the very Left which so enthusiastically lobbied for Nathan now so fervently fights Arutz Sheva's right to voice the opinions of its many adherents.

It's difficult to escape the impression that what's really wrong with Arutz Sheva isn't that its ship didn't distance itself sufficiently from Israel's territorial waters or that studios in Beit El were used. What differentiated it from Nathan's venture was politics.

Thus after 15 years on the air, during which the station proved itself financially viable, professionally capable, and exceptionally popular, it was silenced. Its loyal audience wasn't limited to the settlements. It was

avidly listened to within the Green Line, as most taxi passengers can verify.

Particularly disconcerting was Justice Minister Yosef Lapid's outburst against ministers who pleaded Arutz Sheva's case, warning that they'll have "blood on their hands" if a plane crashes due to radio interference. With all due respect, such scare-mongering is demagogic. Arutz Sheva never endangered aviation. Those who do are numerous small-time pirates with home-based transmitters, often operated by reckless teens. There are plenty of laws against such delinquents. They need only be enforced.

Equating Arutz Sheva with them is a cynical red herring. Arutz Sheva has become a staple of popular culture and we consider it is grossly imprudent to close it precisely because it satisfied proven demand for its journalistic product. Denying the public what it wants and had grown used to will inevitably give rise to charges of politically motivated muzzling.

No amount of legalistic sanctimony will erase this perception.

This country urgently needs legislation to democratize the airwaves. This is the case elsewhere in the free world. It's time we live up to our liberal pretensions. A phenomenon like FOX Television would be impossible here. Nothing, however, prevented a television network with a different ideological bent from giving itself an electronic media platform in America.

It's time our regulations tolerated radio offerings that appeal to a range of political and ideological preferences, as they do to musical tastes. There's no reason an outfit like Arutz Sheva should not be able legally to obtain a broadcasting license. At present this is nearly a mission impossible. Red tape and demands for competition in a tender load the dice.

Entries for local radio tenders repeatedly feature varying combinations of the same groupings and individuals with identical political slants. Arutz Sheva is unlikely to prevail against them. With its record, it shouldn't now be forced into a contest.

The uniqueness of Arutz Sheva's audience must be recognized. Likewise, there'd be no harm if the haredi community, the kibbutz movement, or any reincarnation of the Voice of Peace were also awarded radio licenses.

Ideological pluralism must be promoted in a polarized society such as ours. A silenced plurality isn't in democracy's best interest. Those who do not wish to see extremism flourish ought to be the first to make sure that sizable segments of opinion, on the Right and Left, are allowed free expression.
Citizens who feel stifled, marginalized, and delegitimized aren't likely to espouse moderation.

http://www.israelnn.com/news.php3?id=51592

"This is a painful story," said Atty. Ilan Papo. "How is it that in the course of 15 years, the nationalist public, and especially its MKs, were unable to legislate some kind of law that would enable Arutz-7 to broadcast? After all, Arutz-7 is not just some fly-by-night pirate station - it represents an entire public sector in Israel, much larger than its tens or hundreds of thousands of listeners..." He also noted the essential lack of fairness in the court conviction, in that Abie Natan was allowed for many years to operate his left-wing Voice of Peace station from a ship anchored the same distance from the shore, or less, as Arutz-7's ship...

From Mike Brand:

For the latest picture of the Arutz 7 ship " Eretz Hatzvi ", go to my site http://www.offshore-radio.de/Israel.htm , and press on " Latest Offshore Radio news from Israel.

Mike

In association with radio station WNYC in New York, Radio Netherlands is
holding a Dutch week starting on Monday 17th November. WNYC is the largest
public radio station in the United States. Under the theme 'Old Amsterdam,
New Amsterdam', various political and cultural aspects of the Netherlands
will be featured.

WNYC will be transmitting programmes produced by Radio Netherlands' English
department; from documentaries to human interest programmes. RN music
productions will also be featured, including traditional music, jazz, and
modern music with a Dutch connection. There will also be plugs for our
English Web site where New Yorkers can find our more about the Netherlands.

There are perceptible historical links between New York and the Netherlands.
Names such as Brooklyn (Breukelen) and Harlem (Haarlem) are only two
examples of the links between the past and the present.

How would Boston City Council meetings be webcast ?...

Bureaucratic resistance has been a big barrier to making our
government more accessible via the web.

Regular users of Passport are familiar with the publication's
editorial scope and rationale, but we would like to see a brief
mention of the alternatives to "World Band" when such options exist.

Larry Magne should think of another alternative and acceptable words
other than "World Band" to all the shortwave aficionados around the
world. The word "World Band" is only used for commercial
advertisements that describes a radio that has the capability to
receive foreign broadcasts in shortwave medium.

Put that single cell you call a brain to work and YOU figure out another name other than World
Band.

Regular users of Passport are familiar with the publication's
editorial scope and rationale, but we would like to see a brief
mention of the alternatives to "World Band" when such options exist.

Larry Magne should think of another alternative and acceptable words
other than "World Band" to all the shortwave aficionados around the
world. The word "World Band" is only used for commercial
advertisements that describes a radio that has the capability to
receive foreign broadcasts in shortwave medium.

The marketing people at Sony came up with the term World Band as a
"sexier" alternative to shortwave, but the technology stayed the same.

Steve,

    What are you talking about old man? This is the reports of Radio
Nederland regarding about "world band" on their websites, the links

below:

   http://www.rnw.nl/realradio/booklist/html/passport.html

   http://www.rnw.nl/realradio/features/html/cr031106.html

   Why don't you read those articles first before you make any comments or postings in this newsgroup so you wont humiliate yourself. It will be too embarrassing for you that you have a low comprehension and a low IQ. Perhaps you don't realize that in Google shortwave newsgroup, this is the most popular site being read all over the world to get information. Your comments or postings reflects you own personality and also who you are.
  In this newsgroup, you definitely going to have a high blood pressure, so take it easy and don't forget to take your meds as soon as you get up in the morning. You, and the ones around you will have a much better day.

Andre

Let's see if I understand this: "World Band" describes shortwave, but was a term made up by an advertiser and is " _used only_ for commercial advertisements" even though the term _is_ now almost universally used bu just about everybody as a generic term for shortwave broadcasting and to describe shortwave radios, and so we should quit using the term?? Huh? Come again? Is _that_ what you're saying? Could you send me some of whatever funny cigarettes you're smoking?

D, Forsling

Just FYI, if this is going to disintegrate into a flame war, don't bother
crossposting to rec.radio.broadcasting because I won't continue to post
the articles.

Cheers,
  Ye Olde RRB Moderator

Who cares who came up with the term? While "shortwave"
seems more of a technical description for HF (how is someone
unfamiliar with radio to distinguish between longwave,
mediumwave, shortwave, microwave, etc.?), "world band"
appears to be a better term for conveying the idea that
international broadcasts are heard on the HF bands. (Of
course, there's more on shortwave than just international
broadcasts.)

One of the wonderful things about the English language is its
versatility. "World Band" is descriptive, not just in terms of an
advertising slogan but in describing a service that can, literally,
serve the entire globe.

"Passport to World Band Radio" is a perfect title for a reference book
that covers radio throughout the world. No one gave Grundig, AOR,

Drake and other manufacturers exclusive permission to use the term. It
probably came from and advertising agency's creative team.

No name change is needed.

Rich

Oh my....

How did this thread deteriorate. Don't get so upset folks. This is
what I found from the ITU. Several countries are signatories so I
would guess it is the most accurate info.

World Band - Frequencies allocated for International Broadcasting.

Wide Band - A radio capable of receiving or transmitting on a large
spectrum of frequencies.

Shortwave - Frequencies allocated for International Broadcasting
including utility, military and civil brodcasting stations.

MF (Medium Frequency)- Defined as any frequency or mode between .3 Mhz
to 3 Mhz.

HF (High Frequency) - Defined as any frequency or mode between 3 Mhz
to 30 Mhz.

Hope this helps.

Larry....

Thu 27th Nov 2003

A television crew has been at Manx Radio filming a documentary which is due
to be broadcast on Sky TV at the beginning of February.

It's about the story of United Christian Broadcasters in the British Isles,
and the fact Manx Radio was the first station to air the organisation's
programmes, between 1987, and 1989.

Director and Producer, Graeme Spencer, believes it's very important for
stations to provide a wide range and choice of programming.

I have a good condition 9/10 cosmetically, 10/10 functionally. With whip
rubber duckie, Kenwood rapid charger and 1 good battery. I will sell for
$95 shipped CONUS. Photo upon request

Also for sale, cleaning up:

I was given a new RS pro-96 for a present. We do not have digital here. I am selling it since I already have a BC780XLT. The package is complete from RS, box, manual, antenna, clip and regulated external PS. I will sell the package for $490 shipped. POSTAL MO only. I do not use paypal.

Also have Motorola trunking base and some P110 UFH portables. Photos available for all.

That 1944 California law is a real joke. When I was a kid we could
get the LA County sheriff on a car radio in Phoenix. They were on
1682 kHz and easily receivable at night all over the West.

Many AM radio stations originated as police communications. I suppose
back then they were just happy to have radio. Today the police don't
like scanners one bit.

There have been many discussions about Ham Radio being used in
emergencies on police frequencies to summon help. The police insist it
not be done, even to save a life. I seem to recall a Ham finding
someone badly hurt. He use a local police frequency. The cops came and
took both of them away. One guy to the hospital, the other to the
local precinct.

Popular Communications Magazine is another good source for both
scanner and cell phone monitoring info.

I agree. The laws are stupid. The fact remains, they're laws.

Rich

Well, that makes me a criminal. Oh well. Been a criminal since I started smoking pot 37 years ago. (Never been popped for that, either).

(Via BDXC News at 16.40 this afternoon ..... great news at last!!!!)

This just in from manxradio.com news:

Long Wave broadcaster gets the go ahead

A long-wave radio station is to be set up in the North of the Island, and could be on air by the end of the year.

A short time ago at Douglas Courthouse, Isle of Man International Broadcasting PLC was told it could proceed with its plans.

Bride resident, Nick Cussons, had attempted to block them by lodging a petition of doleance challenging the Communications Commission's decision to award a substantive long wave broadcasting licence to IMIB.

However, Acting Deemster, Roger Kaye, threw out the petition and said he saw no reason why the licence should be revoked.

IMIB chief executive Paul Rusling is delighted with the verdict.

After his petition was dismissed, Mr Cussons said he was disappointed with the findings and is considering his options.

He now has six weeks to consider whether or not to file an appeal.

He does not intend to make a further statement at this time.

Hello,

I am looking for some advice on if the ground system featured below is
sufficent or should be upgraded. It consists of:

- 3 ground rods 10' each around the tower (bonded together)
- 2 ground plates (one outside, one in the shack, also bonded
together)
- lightning arrestors and/or feedthrough adapters
- tower to mast ground
- interior coax switch (not shown)

I provided some pictures below:

http://www.telusplanet.net/~homac/exteriorground01.JPG

http://www.telusplanet.net/~homac/exteriorground02.JPG

http://www.telusplanet.net/~homac/exteriorground02a.JPG

http://www.telusplanet.net/~homac/exteriorground03.JPG

http://www.telusplanet.net/~homac/exteriorground04.JPG

http://www.telusplanet.net/~homac/interiorground01.JPG

http://www.telusplanet.net/~homac/interiorground02.JPG

I am looking for constructive feedback.....

Thank-you....

Lloyd

Hi Lloyd. Certainly an extremely professional appearance to the work. Great to see such attention to detail as your station provides. Feedback now.....

Is that nice drainage-rock surrounding the tower base only a couple inches deep? Seems the ground rods lose effectiveness for whatever depth that rock is. Would have been fine to sink them a full 10' even after digging a 1' deep trench and covering with topsoil. Besides gaining addtional effectiveness from the ground, it's the exposure to air that will cause the most need for future ground system maintenance.

Ground rods around the tower are very close together, is there room to add additional ground rods from at least two of the legs at a distance of 10-20' from the tower?

Tower is very close to, but not bonded to the house. Are there metal rain gutters or metal flashing close by? Bonding to them is indicated, if so.

Is that a picture of coax shield grounding design, using the SS hose clamps? Stainless steel is a very poor conductor and works when nothing else will - but a copper or bronze shield-ground would be better. Andrews Wire and I.C.E both make nice ones.

Interior surge protection for wiring is going to be a serious issue, when a tower is that close to the structure. EMI from a direct attachment so close will be a challenge that might indicate 200% sizing of neutral wiring, double-ended surge protection and some very good bonding. Ground Potential Rise will start right at your station's single point ground with a tower so close - therefore perfect bonding including the connection to the AC service ground is essential. In that respect, those attractive looking insulated wires bonding the station equipment to the single point ground may be inadequate. The bonding is the only protection from such close aboard GPR, and individual heavy, wide copper straps could do a much better job than the wiring shown.

All in all, I think the only major defect is the lack of additional ground rods, as when a tower is right next to you, the desired direction for attachment current is away, away, away. Carry it away with a ground field that uses very heavy low impedance conductors and at least two more ground rods. More is better considering where your tower is.

Best regards,

Jack Painter

Looks like a pretty good start. I would add a Polyphaser rotator surge protector to those conductors passing through the terminal block on the ground plate.

Make sure everything in your shack is bonded together, including your computer etc. Add protection to phone lines. etc.

The other poster mentioned more ground rods. That is a good idea, arrange them to direct the current away from your shack.

Have you bonded this ground system to the rest of the house? If not, do so by running a conducter to the utility ground rod. Be careful doing so as there may be a slight potential difference that will go away when bonded. Also check your water supply. Is it mettalic? Then bond it as well.

Hi Lloyd,

Looks like a nice installation, although your grounding rods might be placed farther apart, or augmented by some heavy gauge radial wires (depending on your local ground condictivity).

What I did note missing was the mention of 'lightning chokes' wound in the coax lines decending from the tower. These are basic to lightning protection for broadcasting towers, but I've rarely seen them implemented by hams.

The idea of a lightning choke is to add a small amount of inductance to the coax so that if a direct lighting strike happens, the instantaneous current flowing though the outer jacked of the coax into your lightning arresters will at least have some amount of impedance limiting the current magnitude, thus reducing the probability of destruction of both the coax and the the arrester itself.

These chokes are more often than not implemented by winding a dozen or more turns of coax around a form (say a 4" diameter phenolic tube) prior to the arrester or spark gap.

Harry C.

Harry, that winding of coax may be useful as an RF choke, but it is most certainly not a lightning choke, and will act more like an air-wound transformer than anything else. Not only is this not specified for any lightning protection systems, it is specifically warned against in many.

> Hello All. First let me comment that the lightning mitigation techniques
used are better than many ham installations. That being said, I would
increase the conductor size between the tower legs and the ground rods.
When I saw these, I thought a "fast acting fuse." The amount of current
that the tower can handle cannot be safely terminated to ground with smaller
conductors.

Also, the screw terminals need to be checked periodically because they will
loosen themselve due to "cold flow." Why not repace them with crimp types
and then solder the crimp with a torch as a back up? I am asuming that this
device is covered by something to protect it from rain, etc?

John-WA4JM, Dade City, FL, home to some of the most ferocious lightning
activity in the western hemisphere.

Jack, while I'm sure that you believe this, I really can't guess where you obtained such IMHO such massive misinformation.

First of all, it is the purpose the the coiled coax to act as an inductor (r.f. choke) because this is how it resists the very rapid di/dt common mode characteristic associated with a lightning hit, thus limiting the peak discharge energy that the following spark-gaps and lightning suppessors must absorb and reducing the overall peak impulse power damage potential.

It's basically a brute-force version of the common computer technique of placing a ferrite torroid around cables to attenuate their common mode impulse transmission/conduction ability. Realize that with sufficiently low SWR, currents through both the inner conductor and outer shield of a coax are equal, summing to zero, hence there is no net electromagnetic field produced. The same is not true for a common mode impulse traversing the transmission line. The bottom line is that only the common mode impulse resulting from a lightning strike will experience the results of the "choke".

I'm not sure why you would believe that a coil of coax would act like a 'transformer' of any type, unless the SWR is truly enormous, a probem in itself. A case in point is that in both proton synchrotrons (typically operating in a swept frequency range of roughly 3-30 Mhz), and in large phased array radars (some of which operate in the UHF range) employ multiple feeder coax transmission lines that are cut the the same electrical length, with the cable lengths in excess of the required physical run length being coiled up somewhere in the system. There is no net significant electrical effect on the cable's transmission characterists in either case.

Prior to completing my degree work at Drexel, I spent 8-years installing and maintaining broadcast transmission systems ranging from 5-Kw to 50-Kw. This included 5 years as chief engineer in one station (WBUD in Trenton, NJ) plus part-time work for WFIL, WCAU, and KYW in Philly. (Additional work in 4 or 5 smaller stations.)

Quite honestly, I can't remember a single one of these that did not protect their very costly antenna installations, transmitters, and on-air reliability without lightning chokes employed in their transmission lines. Still, these broadcasters use equipment that, in general, nothing more sophisticated than your average ham station, but on steroids! True, the average AM broadcasting tower usually exceeds 200-feet, but in an intense lightning storm, a 40-foot ham tower is fully capable of experiencing the same energy lightning hit!

I purchased my first ham receiver, an SX-71 from a ham named Bob Rutkowski (sp?) in Trenton, NJ. A day or so before I picked it up from

him he took an evidently direct lightning hit on his 40-some foot crank up tower holding a 2M beam that was attached to his house. He had grounded the outer shield of the RG-8U coax at the based of the tower, but without a lightning choke in the coax, the hit simply vaporized the majority of his RG-8U, his grounding connection, and most of the final tank circuit in his rig in the basement! Not a pretty sight!

Realize that a commercial radio broadcaster has to survive episodes like this without disruption of their operations. Hams don't. Still the emulation of the broadcaster's time proven protection techniques involves only a small additional cost to an otherwise excellent installation.

For more information, see:

Edmund LaPort, "Radio Antenna Engineering", McGraw-Hill Book Company, New York. (My issue carries a 1952 copyright, still it's an 'oldie but a goodie' with many subsequent editions -- and AFAIK is still the bible of the broadcasting industry.)

IIRC, early editions of the ARRL Handbook also described this protection technique (likely pre-1970) in the days when most hams built their own rigs.

Harry C.

p.s., Jack, I'd love to hear a citation where "it is specifically warned against", and why.

Thank-you for the advice to this point. I think I will invest in the
rotator cable ground. Not sure what to do about the lightning choke.

I don't mind replacing the antenna/mast if I receive a direct
lightning hit, I just dont want to turn be fried to a crisp.....

Lloyd

Hi Harry - well, the web is FULL of massive information, and the old trick
of coiling coax for lightning protection is simply not specified any longer.
I will look up the sites which warned against it, citing amplification of
EMI by such a manuever, and get back to you.

>

Arrestors AND shield grounding are specified at the TOP and BOTTOM of the
towers, and AGAIN at the facility entrance. No coils are shown in modern

drawings of lightning protection, and I have and reviewed those of one the largest communication companies in the US.

Realistically, such a coil never had any chance of slowing down a 8us/20us or faster attachment of 100,000,000v or even a fraction of that in the smallest of strikes. Coax can only carry 4,500v before the dialectric breaks down and then your SWR and balanced currents are no longer part of the playing field. At about 5,500v the coax can no longer carry the energy by itself and will arc over to anything nearby. So diverting 99.9% of the energy via a fast acting suppressor and shield grounding is the only hope for coax which does in fact take an attachment. Most times the coax does NOT receive the direct attachment! So after shield grounding and arrestor connection, the coiling isn't necessary in the first place, would do no good, and can most certainly act as an air wound transformer to EMI if "wrapped in a dozen or more turns" as you said. Even one turn. Fortunately, coax is "resonant" (used only as an example for high-velocity and low impedance) to a fairly small portion of the DC and AC component of a direct attachment. Not so to the EMI near field, which any wire regardless of it's velocity or impedance will be subject to inductive coupling of EMI. The coax shield will absorb most of that EMI, and unless it exceeds 4500v (very possible in a 50 percentile strike) will be diverted harmlessly to any nearby shield ground. 12 turns of the coax shield - you do the math as you are an electrical engineering expert here - what's the voltage out from 4000v in? Yikes.

(sorry of this posts twice, ISP has newsgroup problems)

Hi Harry - well, the web is FULL of massive information, and the old trick of coiling coax for lightning protection is simply not specified any longer. I will look up the sites which warned against it, citing amplification of EMI by such a manuever, and get back to you.

>
> First of all, it is the purpose the the coiled coax to act as an
> inductor (r.f. choke) because this is how it resists the very rapid
> di/dt common mode characteristic associated with a lightning hit, thus
> limiting the peak discharge energy that the following spark-gaps and

> power damage potential.

Arrestors AND shield grounding are specified at the TOP and BOTTOM of the towers, and AGAIN at the facility entrance. No coils are shown in modern drawings of lightning protection, and I have and reviewed those of one the largest communication companies in the US.

Realistically, such a coil never had any chance of slowing down a 8us/20us or faster attachment of 100,000,000v or even a fraction of that in the smallest of strikes. Coax can only carry 4,500v before the dialectric breaks down and then your SWR and balanced currents are no longer part of the playing field. At about 5,500v the coax can no longer carry the energy by itself and will arc over to anything nearby. So diverting 99.9% of the energy via a fast acting suppressor and shield grounding is the only hope for coax which does in fact take an attachment. Most times the coax does NOT receive the direct attachment! So after shield grounding and arrestor connection, the coiling isn't necessary in the first place, would do no good, and can most certainly act as an air wound transformer to EMI if "wrapped in a dozen or more turns" as you said. Even one turn. Fortunately, coax is "resonant" (used only as an example for high-velocity and low impedance) to a fairly small portion of the DC and AC component of a direct attachment. Not so to the EMI near field, which any wire regardless of it's velocity or impedance will be subject to inductive coupling of EMI. The coax shield will absorb most of that EMI, and unless it exceeds 4500v (very possible in a 50 percentile strike) will be diverted harmlessly to any nearby shield ground. 12 turns of the coax shield - you do the math as you are an electrical engineering expert here - what's the voltage out from 4000v in? Yikes.

You have a great installation - and adding a few ground rods and shield
grounds will top it off. Stay tuned for the looping coax fiasco finale....

Jack

>
> - 3 ground rods 10' each around the tower (bonded together)

Lightning likes to go straight. Try to have at least one ground rod connected to the tower base at the base; the rod should be directly under the base or as close to touching the base as possible. A 10' ground rod is good if in conductive earth. In sandy Florida, where I tood several hits, it took over a 20' length of ground rod (1/2" steel water pipe) to hit conductive "hard pan". I just washed it in until it hit some solid clay, and then washed it into the clay as far as I could.

> - 2 ground plates (one outside, one in the shack, also bonded
> together)
> - lightning arrestors and/or feedthrough adapters
> - tower to mast ground - interior coax switch (not shown)

The coax switch should be a grounding switch. Floating elements on an antenna could actally attract a lightning hit. Also, for induced hits (not a direct strike, but with enough voltage to damage equipment due to a nearby strike), the grounding of the antenna lines gives the charge a nice safe path to follow. That's better than letting the current find its own path by arcing somewhere. I like to turn off the AC power to my entire equipment setup when not in use. So, with the power switch on the transceiver and the main "shack" ac power switches off, a lightning surge on the power line can only get me or the equipment when I am actually operating. One last suggestion: put a big (3 or 4' diameter) vertical loop (preferably near the ground) in all tower cables going into the house. (Right over your ground plate might be a good place.) The inductance of the loop, and the fact that lighting likes to ionize paths in a more or less straight lines, will keep the main current surge of a direct hit from entering your house and finding its "home" in your power line or telephone line. I survived operating for many years in the lightning belt of Florida and have the burn marks on my mast to prove it. The only known damage in Florida was some induced power that killed a couple of ICs connected to a printer ribbon cable. That was just from the current going down the tower on the outside side of the wall. Lightning protection is still as much art as science, Lloyd - but what you have done so far should fairly well protect folks in the house. If lightning is going to hit, just let it find a nice safe home - and try not to be operating when it does. HI HI

In Florida, a house one block from us burned to the ground when lightning started a fire in their attic. That couldn't have happened at our house, as the lighting had a 70' tower to hit first, and a 23' ground rod to give the current a safe place to go. We were hit - several times. So, look at your well grounded tower as an asset for true lightning protection - not a liability.

Hi Lloyd,

Of the advice offered, out of the dozen or so comments, only the
addition of radials and grounding of peripheral equipment made any
sense to your already extensive installation. Adding "more" rods
sounds like hail Mary solutions. I would bet almost every house for
10 miles around you survives quite well with one.

Sure, few if any sport towers, but lightning in the vicinity is not so
choosy as to miss every house, building, or power pole simply because
they are not radio amateurs.

I also note the complete absence of discussion about the Code. All
grounds must be bonded (clamped, not screw attachment nor

solder/brazed) with a continuous wire (no breaks or splices). I also note some rather bizarre descriptions of how chokes work (and to add that they are not used by Hams is simply ignorance or the choice to illustrate with poor examples).

I would suggest you mine the archives of rec.radio.amateur.antenna for two correspondents: Richard Harrison, KB5WZI for thousands of commercial and amateur tower installations over a career spanning 50 years (you will discover half to two thirds of suggested embellishments are immaterial fluff); and Reg Edwards, G4FGQ for the topic of successful ground rod application (notable in that laying them horizontal is just as good, if not better).

As to your last comment about getting fried. You should examine that illusion and recall that it brings voltage to mind, not current. Voltage comes from two mechanisms common here, impedance and resistance (the lightning strike is considered to be from a constant current generator willing to present any potential necessary to preserve flow). A sharp bend in a conductor is one source of impedance change for the bad - so graceful sweeps are preferred where you want to change direction. I note the irony of discussion where chokes are used to build voltage (power being equal to I²E and current being constant guarantees a build up of power beyond what would have been suffered) to guarantee spark discharge elements firing (I suppose so, but this sounds like Advertising Copy to sell spark discharge elements). Most successful solutions offered here for years and years all have the common goal of burying the lightning stroke's current into the soil as soon as possible without any impedance to its path. If you research the archives for low resistance paths of lightning, you will find out how little total power is suffered in a strike (don't fall for the monster under the bed stories of a gazillion volts at a bajillion amps).

Having read the various post concerning coiling the coax to form a "choke", I recall a technical article from "PolyPhaser.com", the lightning product company. Below is an exerpt from the technical document covering Amateur Radio lightning protection and coiling of coax cable to form a choke.

Quote:
(from www.polyphaser.com website)

Document Number PEN1016: An overview of Lightning Protection for Ham Radio Stations

Even though the inductive properties of the coax cable appear to be beneficial, and extra inductance can be created by adding a few turns to the coax; don't do it. The added turns can also act like an air wound transformer coupling more energy into the line. Make sure coax lines leaving the tower remain at right angles to the magnetic field surrounding the tower.

Unquote

It is my belief, based on coils and induced energy into the coil, that coiling of the coax will induce an EMF field that can be picked up by the coax, or other cabling, allowing it to enter into the house/shack or, more simplified, follow a path that is not desired, i.e. the coax or rotor cable run to the shack. Grounding of the coax at the top and bottom of the tower, attaching coax lightning protecting products at the base of the tower and running the remaining coax to the shack through buried metal conduit, greatly reduces the chances of lightning strike energy from entering into the cable(s) leading from the tower. Additionally, each leg of the tower, not just one leg, should be grounded through it's own seperate ground rod and each leg ground should be connected to a circular grounding system, around the tower. The tower grounding system should be further connected to a house grounding system surrounding the house with 8 foot grounding rods driven into the ground and connected to the house grounding system (central point grounding). The tower grounding system along with the house grounding system should be connected together. The distance between the tower and the house/shack can be lengthy. Connect the 2 systems together and add additional 8 foot grounding rods every 16 feet along it's path.

Using buired conduit for coax and rotor cable, for example, greatly reduces the chance of EMF fields from flowing along the coax and into the shack. A direct lightning strike to the tower will generate an EMF magnetic field that can be picked up by coax, rotor and coax switch cables then flow into the house and through the equipment and/or wiring. The tower, during a direct strike, radiate a large EMF magnetic field that can be picked up by anything within it's path. The strength of the field reduces by a factor of 1, outlined in the Polyphaser.com technical document.

Just some technical information I've found from lightning protection companies during my search for documentation on tower, antenna, coax and rotor cable installation.

73's,

Mike

Reasons not to create a coiled-coax "choke"

http://www.comm-omni.com/polyweb/hamradio5.htm
Even though inductive properties of the coax cable appear to be
beneficial, and some extra inductance can be created by adding
a few turns to the coax; don' t do it. The added turns can also
act like an air wound transformer that can couple more energy
into the line. This is just the opposite of the desired effect.
Instead, make sure that coax lines leaving the tower remain at
right angles to the magnetic field surrounding the tower.

http://www.wrblock.com/Papers/Amatuer_Radio/APARS_P09.htm
Neatness counts - cables (transmission lines, power (ac and dc),
speaker, microphone, computer, control) should be cut to length
and routed neatly and cleanly between boxes using the most direct
practical route. The coiling of excess cable length on the
protected side should be avoided since it could act as an air-wound
transformer coupling magnetic energy from a nearby lightning strike
back into the protected equipment.

http://www.marcspages.co.uk/tech/2100.htm
Some in the RF industry would have seen coils used as static drains.
The theory is the coil is high impedance at RF and so looks open
circuit, whilst still presenting a short to the DC and draining it
to deck. The problem with them is they too can start reacting
('scuse the pun!) with the capacitance present on the system,
especially at the lower ends of the band.

24hr ops FULL COVERAGE PROTECTION (no "chokes")
http://users.erols.com/n3rr/lightningprotection/

http://www.alvarion.com/RunTime/Materials/PDFFiles/
Lightning_Protection_White_Paper_March31_R41.pdf
ALVIRON SUBSCRIBER SYSTEMS TOWER LIGHTNING PROTECTION
(no "chokes")

And one major US communications company which drawings and specs
are confidential and proprietary information - but they do NOT use
any kind of coiled-coax and prohibit same from all systems.

Here's one exception - from an Amplifier and relay company - they
are NOT in the lightning protecton business and this is very

outdated advice, but shown anyway becasue we're honest!

http://www.ameritron.com/ameritron/man/pdf/RCS-4.pdf

We strongly recommend the use of lightning retarding loops
in the coaxial cables near the relay box (see illustration).
Remember that lightning travels through the path of least
resistance. Station ground leads should be solid, large surface
area conductors. Do not use braided or stranded wire for the
ground leads. Avoid sharp bends in the ground leads. Use
multiple ground rods and/or radials to provide the earth
termination.

Recommend you ignore this and maintain direct paths - JP

Finally, Richard Clark's mention of "code" is pretty important. Reference
the NEC-70 and NFPA-780 for US installations.

Thank-you so much for the feedback and information thus far.

Although I really appreciated the information, I do not want to get
too hung up on the coiling of the coax. This weekend I plan to
upgrade the gauge of the wire from #8 to #3. Also I have now bonded
the cold water pipe entering in the basement floor to the exterior
ground plate.

Any other feedback on the pictures below are appreciated......

Lloyd

- 3 ground rods 10' each around the tower (bonded together)
- 2 ground plates (one outside, one in the shack, also bonded
together)
- lightning arrestors and/or feedthrough adapters
- tower to mast ground
- interior coax switch (not shown)

I provided some pictures below:

http://www.telusplanet.net/~homac/exteriorground01.JPG

Folks,

Is there someone out there who has a recording of the Elvis Presley Memorial Show with Tony Prince on Radio Luxemburg on the evening that Elvis died? I listened to that show over 208 meters medium wave here in Sweden, but I had no chance to record it, and I remember it to be considered radio history, since Luxie decided to skip all commercials during that evening, and play only Elvis records and talk about him... It would be great to have a recording of that show...

Sincerely,
Per Jonsson
Sweden

I was looking at ebay and saw a nice Kenwood TS-680S that you dont see
around much any more,, and though people here should have a look if
they are looking for such a nice radio. Happy Dx'ing to all here.

Frankly, I believe that it takes a lot of balls to post an ad for a
Korean made product and include a waving American Flag and a cartoon
character that proclaims "Go America" in that same ad.

Do you totally lack common sense, or just so shameless in your pursuit
of a sale that you don't care?

What Ham Radio would YOU buy that has been made in America ?
Do you drive a Honda or a Benz? Do you watch a Panasonic or Sony TV?
Jezzzzzz

Frankly, I believe that it takes a lot of balls to post an ad for a
Korean made product and include a waving American Flag and a cartoon
character that proclaims "Go America" in that same ad.

Do you totally lack common sense, or just so shameless in your pursuit

No, I drive a Ford Bronco and my ham rigs includes a Barker &
Williamson 5100 transmitter and a Hallicrafters SX-71 receiver.
Everything else is home constructed, including 2-M and 420-Mhz rigs.
(I am now in the market for a mint condition Collins 75A4!)

I simply objected to you waving the American flag in your desperate
attempt to sell a inexpensive, foreign made, non-repairable and
throw-away consumer item.

I agree with you in general, but I suspect a significant percentage of
real hams reject this and remain loyal to quality American made radio
products that, although costly, at least can be repaired and
maintained. This is why used products like the Collins 75A4 and even
Heathkit products continue to command high prices. When they break,
you can fix them.

It's not entirely a patriotic thing with me. I simply wouldn't want to
own any ham equipment that I can't maintain and repair myself under
emergency conditions. In fact, this is something that was traditional
in amateur radio until very recently.

                                                        Harry C.

Very long feature just finished on "Broadcasting House" on Radio 4 this morning , about right wing and left wing stations in the US and the up and coming liberal station.

Played air checks of various broadcasters.

Are these what used to be called shock jocks? They are more shocking than ours in the UK!

Rush Limbaugh seems to be in a sad state, his catchphrase is "Talent on loan from God"!

G Gordon Liddy seems very opinionated.

I quote from the programme "radio is to the right".

I wonder if the new station, Air America, will be welcomed to widen the dialogue. Will advertisers aim to the liberal market?

Mike

What is not widely publicized about this new network is that it's on a
bunch of technically-weak stations. None of them are competitive, from
a signal standpoint, with the stations that air the right-of-center
programs.

No, "shock jocks" refer to attempts to shock with sexual innuendo.
"Shock" announcers generally don't have any particular political agenda.

IMHO advertisers will buy any program that people who buy their products
listen to.

The LA station on 1580 is a 50kw, that dumps most of its power over the
Pacific Ocean (to protect stations in Mexico....)

What are the other stations?

I would imagine that it's rather difficult to find available outlets
in the major markets for an unproved product, when the big stations
already run the rightwing stuff.

He is in a bad state. He is a drug offender and could face prison
time. He should, given what he has said about drug offenders in the
past. I have to wonder why he needed all those painkillers when he has
such a cushy job in radio.

> G Gordon Liddy seems very opinionated.

He always was (so is Rush). Liddy's also a convicted felon; one of the
"Watergate" conspirators.

> I quote from the programme "radio is to the right".

The people with money are generally conservative, so that's where they
target the ads.

If you're referring to the former KDAY in Santa Monica, it has a
decent signal to the North but does have to protect the Mexican (used
to be XEDM, I believe) on the same frequency.

I'm afraid the BBC is stuck in the last century. Rush Limbaugh has
been using that slogan almost since day one well over a decade ago.
It's a little like saying WINS is in a sad state because they've used
"Give us 22 minutes and we'll give you the world." Sometimes a slogan
stands up to the test of time. Advertising agencies have orgasmic
incedents when they discover one of their slogans enters popular
culture.

>G Gordon Liddy seems very opinionated.

Duh!

>I quote from the programme "radio is to the right".

Duh!

>I wonder if the new station, Air America, will be welcomed to widen the
>dialogue.

First, a very small percentage of the population will have access to
Air America programming compared with its conservative competition.
It'll take many years to develop the coverage enjoyed by Limbaugh

(600+ for Limbaugh. Fewer than 20 marginal signals for Air America). The conservatives already have the best signals on well branded stations.

New York will be very difficult because their outlet is solidly branded as a Black station, both Black talk and Dominican music. The WLIB heritage (sadly) will have to be destroyed before a new one can be created. That'll require a call letter change and very expensive promotion. Their competition will be WABC. WABC does a lot of transit promotion and television during important rating surveys. WABC and KFI, Los Angeles compete for the title of the most listened-to Talk station in the nation.

I have the feeling that Al Franken, in partifcular, will make it an "us vs. them" atmosphere. If he does, it'll be a wonderful promotional medium for conservative stations. The more he mentions O'Reilly and Limbaugh the more Air America should charge Premiere and Westwood One for advertising time. I say that sadly because I really like Al Franken and Randi Rhodes.

>Will advertisers aim to the liberal market?

By and large advertisers avoid any kind of controversy. That's why Laura Schlessinger lost 30 million in billing over her slam at the gay community and Michael Savage threatened to sue everyone on earth for complaining to his advertisers for something similar (excuse: "I didn't know the mic was on"). Large network advertisers avoid controversy like the plague. It doesn't matter if the controversy is on the right or the left.

I can't believe the BBC is just noticing that Talk Radio in the US is right wing.

Rich

Rich,

Generally in the UK we have a relaxed and permissive attitude and on air
presenters do not try to make fools of those who 'phone in.

Mike.

It is only moderately listenable in the San Fernando Valley in the daytime,
and virtually useless there at night. That is to the North.

1580 in the US protects, if I am not mistaken, the B assignments in both the
US and Canada.

And XEDM in Hermosillo, a non-directional 50 kw station, virtually wipes it
out in the fringe areas at night.

Advertisers aim at large audiences. They seldom care about political
opinions.

How far north? It doesn't seem to put much of a signal into the
San Fernando Valley during the day (at night, all bets are off)....

Unfortunately, making fools of callers is what drives most US Talk
Radio. We get a reprieve on the weekends when the "lifestyle" shows
predominate. It's hard for a pet show to make mean-spiriited fun of
someone who chooses a pig as a pet. You can criticize our President,
but keep your opinions to yourself when it comes to our pets. In this
case, the pig is smarter.

Rich

So far today, the only advertising has been PSAs, promos for other
programs, and an XM trade. And Franken pushing his books, of course.

G. Gordon Liddy calling in from his show to congratulate Franken on HIS
show is a nice touch.

FWIW, Air America is streaming at:

<http://play.rbn.com/?url=airam/airam/live/live.rm>

off of <http://airamericaradio.com>.

Elisabeth Mahoney
Friday April 16, 2004
The Guardian

Forty years ago they were broadcasting pirates on the open sea, pitched in battle against the BBC. This week the old foes joined forces to commemorate the radical radio days that began on Good Friday 1964, with test transmissions for Radio Caroline. All week, on 729, 765 and 1530 MW and at www.bbc.co.uk/essex/pirate, former pirate DJs (including Dave Cash, Ray Clark, Mike Ahern and Roger "Twiggy" Day) have been broadcasting from a vessel, the LV18, half a mile out to sea from the Essex coastline, with most of the crew living on board. These special programmes continue until tomorrow.
It has been a week of indulgent nostalgia, with playlists taken from the pirate radio heyday between 1964 and 1967, along with news headlines, weather forecasts and jingles from the time. Despite the lack of illegality - the very thing that defined this as counter-cultural - there has a been a strong reminiscent feeling of all boys together on board. And it is all boys. The only female presence on the LV18 is Daphne, a dishevelled-looking mannequin you can see on the website's picture gallery. All this does rather take you back, and not always in a good way.

Tuning in, two things have been quite startling. The first is how cosy and hoary these once challenging broadcasters sound: this is the kind of the radio demonised as Smashey and Nicey, and relegated from Radio 1 to local stations. It is, if you don't have the nostalgic connection with it, troublingly like Radio Norfolk as presented by Alan Partridge. It is hard - let's be frank, it's nigh on impossible - to imagine that this used to sound dangerously cutting-edge.

But it did, and therein lies the second surprise: how beloved and welcome this week of radio swashbuckling has been for those who heard 60s pirate radio the first time around. "We turned on the radio and thought we'd gone to heaven," one listener emailed, and there have been many calls for the BBC to keep the temporary station permanently afloat. It plays the tunes Radio 2 hardly plays these days, and with considerably more verve than stations such as Saga, which target older listeners.

Though the station's style may leave a younger audience cold, it's hard not to warm to the audience's affection for it. "Oh the ambience, the echo, it takes me back 40 years," said one listener, relishing the special pirate sound created by a reverb unit on board. There were good anecdotes, too. Dave Cash, broadcasting yesterday in a dressing gown because one of the other pirates had hidden his clothes in a jape, recalled when he first met Kenny Everett onboard the boat that was home to Radio London. "There was this little grey person," said Cash, "being sick all over the place."

(Broadcasts cease tomorrow (Saturday) moorning

The Guide to Radio Museums and Vintage Radio in the UK has been
comprehensively updated on the BDXC web site for the Summer 2004 period.
There are several new entries and unfortunately a number of deletions
following some recent closures. Links to museums and other vintage radio web
sites have also been added where possible for all entries. Please let us
know if you spot any further updates. We always recommend phoning beforehand
to check opening times, especially out of season, so phone number are also
given.

I bought the Audiovox plug and play unit for my car and home. The
programming is absolutely excellent. The home unit works great, but I
am getting a lot of dropped signals when I use it in my car. Sirius
is *supposed* to have terrestrial repeaters for areas that have trees,
etc. blocking the satellite signal, but I am not getting the
terrestrial signal. I have spent a lot of time on the phone with both
sirius and audiovox, and they are absolutely zero help. They don't
even know how their own equipment works. Some of my friends have the
XM Roady, and they claim that they do not have this problem. I have
no idea if I can get my money back from sirius, but I'm going to try.
If successful, I will buy the XM unit. Has anyone else had this
problem with the audiovox sirius unit?

Thanks,
Kirk

June 15, 2004
BY CHRISTOPHER BURBACH

It's the baseball version of a museum's audio guide.

Die-hard fans for whom the sights and sounds of Rosenblatt just aren't enough can buy 2004 College World Series-branded radios and listen to broadcasts of the games. The small radios will come with earplugs and a frequency guide to four radio broadcasts: ESPN's television coverage, the NCAA Radio Network call and the play-by-play by the local broadcasters for the two teams playing any given game.

So if one of Cal State-Fullerton's players goes deep, Titan fans can listen to KWRM-AM announcer Rob Buska's signature home-run call, "Going once, going twice, gone!"

The signals will go out through a short-wave radio transmitter set up for the CWS. They will reach Rosenblatt seats and at least some stadium parking lots, but not much farther, said Damani Leech, the NCAA's associate director of baseball and football.

The radios cost $10. They will be sold in the Event 1 tent outside the main

entrance to Rosenblatt as long as supplies of 5,000 last. They will be available in the center field concession area on the series' first weekend only.

By SHEILA BOUGHNER-BLAIR

A lot of stations share limited FM frequencies at the lower end of the radio dial.

Those listening to noncommercial FM radio stations in Venango County may be fated to a sometimes-bizarre mix of National Public Radio and religious broadcasting.

On a recent morning, an attempt to tune in Erie's NPR affiliate, WQLN, on its Oil City translator at 91.9, yielded a combination of Modest Mussorgsky's "Picture at an Exhibition" from WQLN and a discussion of how houses really are haunted by demons, aired on a neighboring religious station.

NPR affiliates, noncommercial religious stations and college stations share

the limited FM frequencies between 88.1 and 91.9 megahertz at the lower end of the radio dial reserved by the FCC for educational, community and non-commercial use.

To prevent interference, stations are separated by at least two channels on the radio dial, so available noncommercial FM frequencies include 88.1, followed by 88.3 and so on through 91.9.

The local non-commercial stations occupy 89.3 (WQLN in Meadville), 89.5 (WAWN in Franklin), 89.9 (WVME in Meadville), 89.9 (WVME in Cochranton), 90.3 (SonLife at W212BK in Franklin), 90.3 (WARC in Meadville), 91.5 (WQLN in Titusville), 91.9 (WQLN in Oil City) and 91.9 (WVME in Meadville).

The only full-service stations in the local mix are WAWN of Franklin (2,000 watts) and WVME of Meadville (4,400 watts). The rest are translators, low-power antennae (of 10 to 13 watts) that relay a full-power station's signal.

Signal confusion can be caused by a number of factors including the relative power of full-power stations and translators, atmospheric conditions, terrain, receiver characteristics and location and the increasingly crowded nature of the airwaves.
WVME

One possible factor affecting WQLN's reception in Venango County is the fact that WVME in Meadville is on the same frequency as WQLN's translator in Oil City at 91.9.

At 4,400 watts, WVME is much stronger than the WQLN translator.

Tom Pysz, WQLN's director of broadcast services, said he can pick up WVME as far north as Erie.

Low-power translators, on the other hand, are designed to simply "fill in little gaps," he said.

He described WQLN's translators as "back-fill for those who can't get WQLN on 91.3."

"FM signals are line of sight, so if you are in a valley, you cannot get 91.3 very well. So we re-send it on (the translators). It helps those sitting in the valley," he said.

When WVME was constructed, "some engineer said a 44kw station could fit here. Unfortunately, our little translator in Oil City may be potentially overpowered," Pysz said.

However, a full-power license such as WVME's "could have precedence over a translator," he said.

"It could be that we would be forced to move our frequency. Nobody is doing anything wrong. It's a technical issue.

Maybe we have to change our frequency. But that can be expensive," he said.

The FCC is "very strict about allocating frequencies," he said. "I don't think anyone chose it (91.9) deliberately to block out WQLN."

Which frequency a station is licensed on is "an FCC thing," he said.

Prior to the application, engineering studies are done to determine open frequencies.

"Translators get drowned out by stations across the country. That is something translators will have to work out," Pysz added.

"We've been around for a long time. As new stations come on the band, there is more and more interference," he said.

"It's going to be interesting as years go by as more and more people want band width," he said.

When the FCC licenses a translator, it is because no full-service station has filed for a license on that frequency, said Doug Hainer, chief operator of WCRF in Cleveland, which is rebroadcast on WVME.

When a full-service station files for a license on the same frequency as a translator, "it is expected that (the translator) will go off the air," he said.

"The interference is to our station, not the Oil City station," he said.

He said his station does not intend to force WQLN off the 91.9 frequency, however.

"We are also the owners of (translator) stations," he said. "We know you would rather not be forced off the air."

"We don't have intentions of doing that (asking WQLN to go off the air)," Dick Lee, the station manager, confirmed. "We would like them to be able to continue operating."

"It's a very common scenario. We have lost and made ineffective many translators over the years," Lee said.

"That is kind of the lot of translators," Lee said. "When the FCC first allowed translators, they were not intended to be permanent stations. If they were causing interference, they had to cease and desist."

"It never became an issue until recently," he added. "As the FM approaches being full, there is more interference. They are trying to fill every possible allocation and at the same time not allow interference."

Hainer said one possible solution for listeners seeking to hear either WVME or WQLN on 91.9 is a directional antennae, "which can reject stations not in line with the antennae."

Pysz said WQLN is currently applying for more power and a different frequency for the Meadville translator. The process could take a couple of years, he said.

"It could be a lengthy process. It's a complicated thing to do," he said.

The station may have to consider a similar solution for the Oil City translator, he said.
WAWN

When the changes to the Meadville translator are complete, that may eliminate another potential source of signal confusion.

Some people halfway between WQLN's Meadville translator at 89.3 and Franklin's WAWN at 89.1 might "get them both," according to Pysz.

"It's a function of radio," he said. "Where you are sitting, you can pick up both of them," he said. "It's not that anyone is doing anything wrong. It's like there is a light bulb in the living room and the bathroom, and from where you are standing, you can see them both."

"If you are in the right spot, you pick up the larger station (WAWN)," he sa id.

Jane Richey said when WAWN first signed on in 1998 the station received a few complaints from people who were no longer able to receive WQLN.

"When we went on the air, we became the strongest signal in the area. We are not real powerful, but we are strong. This is our primary coverage area," she said.

"We are not interfering with WQLN's signal in any way," she said. "This is our primary coverage area and it is their fringe area."

"We are right within the spectrum we are supposed to be," she said. "We are very careful about that."
WAWN engineer Lee Richey agreed.

"The FCC never puts stations side by side in a primary coverage area - just so they don't interfere," he said. "There is a wide separation. There's no chance in the world our signal is bleeding over into the signal WQLN occupies."

"Whether or not a listener happens to hear our signal when listening to WQLN depends on a number of things," Lee Richey said, and he indicated that one factor is proximity to the WAWN station, located at 149 Summit Drive, Franklin.
"The quality of the radio also has a lot to do with it," he said.

"There are radios quite capable of separating strong signals and weak signals," he said. "Most modern radios have no performance specifications published though, so the only way to determine that is to actually try it,"

he said.
SonLife

"FM signals are line of sight, and mountains and valleys can do weird things," David Whitelaw of SonLife radio said. He said his company has worked with NPR stations to eliminate interference.

"They (an NPR station in New York state) were having trouble picking up their receive signal (the one going to the translator). We helped them put a filter in. I went up there myself, and we found some solutions," Whitelaw said.
"Some problems can be fixed," he said.

Others cannot.

"They're running into us and we're running into them. There's nothing you can do about it," he said.

The signals from translators "only go out about 20 miles," he said.

"Someone five to 10 miles from my tower trying to listen to (a distant signal), may hear my signal," Whitelaw said.

"We have a good relationship with NPR," he said. "I think well of them. (We) both know how these things work," he said.
"What they are doing and what we try to do is replace translators with full-power stations. That's really the answer. But the FCC is not granting new licenses for full-power stations. There has been a freeze for a number of years. We can't and they can't (get full-power licenses)."

He said the FCC is not accepting applications for new translators either.

"Interference among translators, there's not much you can do. Once you get outside of town, it (the signal) is going to go," Whitelaw said.
Reception will be worse in the spring and the fall because of inversion, cold air on top and warm air below, he said.
"The signals go kind of funny. The warm air brings signals to the ground quicker. In cold air, signals go farther," he said.
He said his station has received no complaints about signal interference.

Hainer of WCRF summed up the state of noncommercial radio reception in the county - at least for now.

"In Venango County, there is going to be an interference zone," he said.

The ARRL Letter
Vol. 23, No. 25
June 18, 2004
[The ARRL has weighed in on behalf of Iowa amateur and ARRL member Jim Spencer, W0SR, of Cedar Rapids, who has suffered severe broadband over power line (BPL) interference for more than two months. A formal complaint to FCC Enforcement Bureau Chief David H. Solomon calls on the Commission not only to order Alliant Energy's BPL field trial system to shut down but to fine the utility $10,000 for violating the Communications Act of 1934 and FCC Part 15 rules. Alleging "ongoing harmful and willful interference to one or more licensed radio stations," the ARRL asked Solomon to intervene "on an emergency basis."]

http://www.uplc.utc.org/index.v3page?p=44489

http://www.uplc.utc.org/file_depot/0-10000000/0-10000/7966/folder/33324/UPLC%20Comments%205_3_2004.pdf

Power companies are in full denial! (Just saying it doesn't make it true.) If you believe what's being said by UPLC, I have some great land to sell you in Florida, and a wonderful bridge investment in New York. (When did the BPL interference spectrum drop to 1.7 MHz ??)

ak

- - - - - - - - - - - - - - - THE UPLC STORY - - - - - - - - - - - - - - -
SUMMARY
The UPLC generally supports the FCC's initiative to develop rules that will support the deployment of broadband over power line systems that will help achieve President Bush's goal of universal affordable broadband access by 2007.1 The President supports the development of technical standards for BPL towards that goal.2 Utilities and technology providers are poised to meet this ambitious goal and the UPLC appreciates the strong support of the FCC in its BPL proceedings.

The UPLC believes that the definition of Access BPL is potentially over-inclusive and should be slightly revised. The UPLC supports the proposal to retain the existing emission limits at the present time, recognizing that the FCC is proceeding cautiously, even though it has found that the interference potential from BPL is low.

Before the Federal Communications Commission
Washington, D.C. 20554
In the Matter of Carrier Current Systems, including Broadband over Power Line Systems
ET Docket No. 03-104

ET Docket No. 04-37
Amendment of Part 15 regarding new requirements and measurement guidelines for Access Broadband over Power Lines Systems
COMMENTS OF THE UNITED POWER LINE COUNCIL

Pursuant to Section 1.415 of the Federal Communications Commission ("FCC") Rules, the United Power Line Council ("UPLC") hereby submits its comments in response to the Notice of Proposed Rule Making in the above referenced proceeding.3 The UPLC supports the proposal to retain the existing emission limits at this time, and suggests only slight changes to the operational limits proposed for Access BPL systems, as well as the proposed definition of Access BPL. Finally, the UPLC supports the proposed measurement guidelines, which will produce consistent and repeatable results that demonstrate compliance with the Part 15 rules. The UPLC heartily thanks the FCC for its support in developing these rules, which strike a very conservative and pragmatic.

. . . .

The UPLC is dismayed by the misinformation accepted as gospel by opponents of Access BPL systems. Despite apocalyptic predictions that "BPL is a Pandora's box of unprecedented proportions", the UPLC agrees with the FCC that Access BPL devices will not cause the power lines to "act as countless miles of transmission lines all radiating RF energy along their full length."6 These opponents have produced no scientific evidence to show otherwise, and all the measurements in the field contradict their abstract calculations. The industry continues to test and to address these concerns with licensees in areas where systems have been deployed, but there needs to be a rule of reason when it comes to allegations of BPL interference, and the UPLC applauds the FCC for making that message clear in this proceeding.

Definition of Access BPL
The proposed definition of Access BPL systems should be narrowly tailored to apply only to systems used to provide broadband access to the customer premises. As such, the UPLC recommends this slightly revised version of the FCC's language in the NPRM: Access Broadband over power line (Access BPL): A carrier current system that transmits high frequency (>1.7 MHz) radio frequency energy by conduction over electric power lines owned, operated, or controlled by an electric service provider for the purpose of delivering broadband data services. The electric power lines may be aerial or underground, but do not include power lines within the customer premises or in riser conduit within buildings. Access BPL does not include power line carrier systems, as defined in Section 15.113 of the Commission's rules.

E-mail message

From: steve@stevebrownonboard.org(Steve@SteveBrownOnBoard) Date: Wed,
Jun 23, 2004,

 Subject: RACE-BAITING, "WHITE-TRASHING," ANTI-SEMITISM & IMPERMISSIBLE
BEHAVIOR AT WBAI
Race-Baiting, "White-Trashing," Anti-Semitism, Physical Intimidation,
and Other Impermissible Behavior at WBAI

The following piece identifies real people, reproduces transcripts from
actual sound checks, reprints excerpts from current list-servs and the
public record, and describes actual incidents that I myself have
personally witnessed, and that, in some cases, were also simultaneously
witnessed by hundreds of others.

Those whom I have specifically singled out by name in this piece are not
"small fry" or a few isolated "crazies," of which any organization such
as WBAI must expect to have its share. On the contrary, all are
prominent, long-time "personages" in the WBAI community. Most if not all
are also prominent producers and on-air personalities at WBAI, or indeed
are members of its highest management levels.

I wish to make it clear that (1) no one but myself is responsible for the information and conclusions expressed below. And (2) that I am writing, not as a member of the WBAI Local Station Board, but as a listener and private citizen.

If any of those named in this piece wish to dispute the truth or accuracy of what I have written, they are free to hold me responsible either in a court of law or in the court of public opinion.

I ask only that they address themselves specifically to the truth and accuracy of what I have written, and to the issues I have raised, not to whether I "... should be ignored because [he is] motivated by dreams of White supremacy," or should be "watched" because I am "just another old, rich White man who wants to rule Pacifica and keep people of color out."

The above are just two of the ad hominem, "arguments by race-baiting" that have often been directed at me whenever I attempt to call for a discussion of certain issues.
And that is one of the reasons I have written this piece.

For I would like to see an end to the corrosive and divisive race-baiting, "white-trashing," anti-Semitism, and physical intimidation that have been occurring in and around the station with increasing frequency.

It is my hope that those who encourage, or abet, or participate in such behavior will be replaced in their positions of authority and prestige by those more in tune with both the letter and the spirit of the Pacifica mission.
To The Members of the WBAI and Pacifica Community:

Recently, as a result of some of my postings on the issue of race-baiting, "White-trashing," anti-Semitism, physical intimidation and other impermissible behavior at WBAI, I have come under attack by a number of friends and colleagues of those whom I have accused of contributing to the current (and, in my opinion, deplorable) state of affairs at WBAI.

One such attack came from Dred-Scott Keyes, an WBAI engineer. He recently wrote an open letter to the Pacifica National Board (widely circulated on all of Pacifica's list-servs) entitled "Steve Brown and the Arbitron Myth", in which, among other things, he accuses me of unfairly criticizing WBAI's program director, Bernard White.

I do not know Mr Keyes personally, nor do I believe we have actually ever met. But I honor his long-time service to WBAI and =96 since Mr Keyes is a long-time associate of the WBAI Program Director =96 I also honor his praiseworthy attempt to defend a colleague whom, he feels, I have unjustly criticized.

Since Mr Keyes and others have raised important points around the above issues, I hope this piece will answer them in a manner that respects Mr Keyes' long service to WBAI as engineer, producer, and on-air

personality.

I will start, not with an examination of WBAI Program Director Bernard White, but with WBAI engineer and producer Erroll Maitland. That is because, although not as highly placed as Mr White, his statements and behavior have been cruder, more inflammatory, and (but only marginally) more physically abusive.

For example, here is an excerpt from an Erroll Maitland interview that had been broadcast on KPFA (and was recently quoted on a WBAI list-serve).

The except seems rife with race-baiting and is shamefully full of crude anti- White characterizations. However, I reproduce it below, so you can judge for yourself.

The excerpt is 34 seconds from the sound-clip of an interview broadcast over KPFA, on July 8, 2003, regarding a debate over what should be included in Pacifica's new bylaws.

<BEGIN TRANSCRIPT>
Reporter : Local station board member Errol Maitland of WBAI in New York supported that draft [which was defeated, but which he says] would have sent a message to what he calls "the neer-do-good liberals in Pacifica-land."
Maitland: And that they shot down because at the core of their -- these white people on the Pacifica board felt that black folks, that niggers came in and messed up their nice laid back foundation and they wanted to take it back . They wanted to take it back to the bosom of Berkeley where it can become a lily white organization again, free from niggers.
<END TRANSCRIPT>

A WBAI Local Station Board member who had read Erroll's statement on the list-serve then wrote (with what I detected to be an underlying note of pride), that such statements could never been made at WBAI, because:

"... if Erroll [Maitland]'s [racially offensive] statement had been broadcast over WBAI, there would have been a major protest from [our] listeners, black and white."

But in fact, Erroll and others have been broadcasting offensive statements of that nature over WBAI for years. And though there have indeed been protests from listeners, by and large the management of WBAI (and certainly Erroll Maitland) has shrugged them off, usually without any response, let alone an apology to the listeners and an admonition to Erroll and those like him.

For whatever it is worth, I have heard Erroll Maitland make such statements myself.

So have countless others. And not just over the airwaves. But also at

meetings, fundraisers, public events, and broadcasting conventions.

In fact, I heard Erroll go on in this vein for 20 minutes in front of the microphone at the 7th Annual Grassroots Radio Convention in upstate New York, a few years ago, where, unfortunately, no one present made a peep of protest. For it is an old story that it is "OK" when a Black person utters the kind of crude racist remarks that would get a White person tarred and feathered anywhere in Pacifica.
Even more recently =96 just a few days ago

=96 Erroll appeared on a Saturday morning program over WBAI and discussed the Clearwater Music Festival, then going on. He characterized it as
"just a bunch of White men playing Black Man's music, and that's no good." [From memory. The sound clip will soon be posted online.]

But Erroll is not just words. He is a "major power" at WBAI who abuses this power to cut off or cut into the programs of other producers he does not like.

Or to deny them the airwaves, on his own whim, whenever he feels like it, as he did when Robert Knight came into the station to do a scheduled broadcast and Erroll decided, on his own, that he would not let Robert on the air.

As far as I know, Erroll was never admonished, let alone disciplined, for this egregiously improper and (with reference to the title of this piece) definitely "impermissible behavior."

Another example of Erroll's documented impermissible behavior (still studiously ignored by management, with whom Erroll is tightly connected) concerns the physical harassment and abuse of a woman.
Not long ago he assaulted (there is no other word for it) a female Pacifica volunteer, a white woman in her 50's, whose opinions he did not like.

Erroll, who is an imposing 6-2 inches tall and weighs (my guess) nearly 250 pounds, pushed his entire bulk right into this woman's face (she is approximately 5-1 and weights perhaps 110 lbs).

He then strode forward as fast as he could, so that she was forced to stumble quickly backwards in order not to be trampled. And all the while, as he drove her backwards across a distance of perhaps 25 or 30 feet, Maitland had a huge gleeful smile on his face, as he repeatedly set off the electronic flashbulb of his camera into this poor woman's eyes -- again and again, from a distance of approximately 6 inches.
The woman, who had a serious occular nerve condition, has been having headaches and mini-seizures ever since.

You may wonder how I know this, and why I accept it as true. The reason is that I personally witnessed this incident, and photographed some of it as it happened.

Where did it happen? It happened in sight of several hundred other Pacifica supporters who were attending a Pacifica National Board meeting at the Cathedral of St John the Divine, 112 Street and Amsterdam Avenue, in Manhattan, approximately a year and a half ago.

There is even an audio clip (since the convention had been recorded) in which one can hear the voice of Leslie Cagan, Pacifica National Board Chair, shouting out from her seat on the dais =96 "Stop, Erroll, Stop!"

The woman protested to the station manager, to the Pacifica Executive Director, Dan Coughlin, and to the Pacifica Board Chair, Leslie Cagan (who was a witness). The woman felt that the incident warranted an apology, at least, and possibly some disciplinary action against Erroll. You would think that with so many witnesses, this would have been accomplished quickly (and fairly).

But neither Cagan, nor Coughlin, nor the WBAI station manager could be persuaded to take action, or even request an apology from Maitland. That is because our "leaders" are fearful to be perceived as "taking the side" of a white woman who was challenging a Black man =96 let alone a Black man with so many friends in high places at WBAI.

This situation continues today.

Of course, sometimes a Black man will be disciplined for the "inconsequential" act of assaulting a woman. But he has to be a Black man who has lost his friends in high places. For example, let us examine the case of Clayton Riley.

Mr Riley is a Black man, a long-time WBAI producer "famous" for assaulting woman. Yet he kept his air-time on WBAI for many years, in spite of physical abuse, profane language, and anti-White racist remarks. Yet he was fired by WBAI for launching a violent physical attack on a woman, in full view of the public, at an earlier PNB meeting =96 just as Erroll Maitland did.

So why was Riley fired for his public assault on a woman, when Erroll was not even slapped on the wrist for his?

Because Riley had committed the foolish mistake of assaulting =96 not just any woman, or "just" a White woman =96 but a Black woman. And one who also happened to be even more highly placed than he, since she was a director of the Pacifica National Board. So in this case, it wasn't justice that triumphed, but simply power politics.

All things being equal, therefore, and absent any special considerations of power or cronyism, an injustice committed against a White person at WBAI, does not seem to generate much concern either among the Black leadership of WBAI, or among their White supporters who pander to them because they need their support to keep their jobs at the station.

Sadly, the comments and behavior of Erroll Maitland are not much different in tone from offensive comments and behavior by others at

WBAI, both on and off the air.

For example, Program Director Bernard White allows anti-White remarks and other personal attacks to go out over the air without any comment or explanation or context. In effect, this is tantamount to encouraging and abetting such comments and behavior.

Here is my own personal experience with Bernard White and Erroll Maitland. Shortly after the LSB election in February 2004,

Mr White went on the air with Erroll Maitland and began to disparage, by name, some of the elected members whom he did not like or who had criticized some of his programming decisions in committee meetings or on the list-servs.

Abusing his access to and control of the airwaves, he proceeded to talk about me as one of the "rich people who had bought the elections" [this from memory; the actual sound clip is posted online]. Then he referred to me as "Steve 'mailing list' Brown," falsely implying to his listeners that I had improperly used the station's mailing list to get myself elected.

White then ridiculed others who were elected, as in "Paul=96are you crazy [i.e., for electing him] =96 DeRienzo" and as in "Carolyn 'Bird'" =96 whose name he deliberately mangled, and which he well knew was not "Bird" but "Birden."

And then he pretended he could not pronounce the name "Miguel Maldonado," former LAB chair, and current LSB member, whose name Bernard White had pronounced several thousand times in the past, on and off the air, with no apparent difficulty.

White also spoke about how some people "want to change the complexion of Pacifica, physically as well as politically" =96
a coded bit of race-baiting of the kind that he frequently makes to inflame and confuse his audience, as if to suggest that Pacifica and WBAI are in imminent danger of a coup led by White supremacists, when in fact WBAI and Pacifica are among the most diverse and least racist entities in America.

Then there is the incident in which Bernard White fired Robert Knight as the host of Wakeup Call at the end of last year (in order to take the job himself, usurping over 15 hours of air-time each week =96 more than three times that of any producer =96 in direct and flagrant violation of WBAI's union contract with AFTRA and its agreement with USCOC).

As Knight related it to an audience of 100 WBAI listeners, whom I had invited him to address on the subject, and as he repeated in a widely circulated public letter, Bernard White had warned Robert Knight that "You're playing too much White-man's music on your show" -- and promptly fired him the next day. Forget the cause and effect, and simply look at the words.

But Program Director Bernard White does not limit himself to words or innuendo. He too, like his friend Erroll Maitland, resorts to physical intimidation, as described below.

Many of you know that Mike Feder was a broadcaster on WBAI for over 25 years.

He is not an admirer of Bernard White, and they differ in how the station should be run. Feder often made his views known in private, and Bernard White did not approve. Recently, White began harassing Feder consistently around the station.

Then, abruptly, about 2 months ago, Feder left the station without explanation after 25 years of uninterrupted broadcasting.

When Feder was finally prevailed upon to explain, he did so on the air.

I found what he said to be shocking, but evidently, in spite of the many complaints about
Feder's departure, management did not.

Here is what Feder had to say about his reasons for leaving WBAI. This is just one of numerous incidents he recounts.

Please bear in mind, when you read the following, that Bernard White stands 6-4 inches tall, and probably weighs more than 300 pounds. And that Mike Feder is about 5-4 inches tall, and weighs less than 140 pounds.
<BEGIN QUOTE>
"The last two times I came into WBAI to do my show, Bernard, who really had no business there on Sunday mornings, followed me into the bathroom, cornered me and stood about two inches from my face, looming over me and glaring at me, even blocking my way out of the bathroom. After a minute or so , he stepped aside, but when I went to leave he followed me, banged into my heels and followed right back into the station. He used to, even before these two Sundays, come in and just stand there glaring at me through the glass of the studio... Bernard has a habit of putting his bulk too close to people he doesn't approve of--looming over them. Its just physical intimidation."
<END QUOTE>

Another example, which many will remember hearing about, is Grandpa Al Lewis' on-air account of how Djabel Faye, after becoming Program Director, ran up to Grandpa outside WBAI's control room, shoved his fist in this 85- year-old man's face, and screamed at the top of his lungs, "I have the power over you now, White man!" Faye was not disciplined or even reprimanded for this outburst.

Returning to Clayton Riley: For years this Black program host would openly and loudly taunt White programmer Bob Fass, by calling him "my bitch" in front of other staffers =96 with no response from management or anyone else at the station.

Riley also physically attacked Robert Knight in WBAI's studios, yelling and shouting at him that, "Amy Goodman is a White bitch and you kiss her ass" Again, without consequences.

Clayton Riley, as I alluded to above, had a long history of abusing women, especially White women at the station. (I believe that one woman specifically left the station for this reason.) Although complaints were filed, they were never acted on. For WBAI's management team evidently did not care, or felt it was not politically expedient (or not to their liking), to investigate assault charges by a White woman against a Black man.

Although Clayton Riley's career of verbal and physical abuse spanned Valerie Van Isler's tenure as General Manager, and also the tenures of Samori Marksman, Bernard White and Djabel Faye as Program Directors, no action was ever taken against him by any of them, either for his racist commentaries or his physical violence.

He was supported and protected for years =96 regardless of how many complaints about his anti-White racist remarks and physical abuse were made by staff and listeners =96 until he committed the unfortunate "tactical" error of attempting (as described earlier) to punch out a Black(!) Pacifica National Board member (a female national board member, of course) at a public meeting, on a national radio hookup, in front of an audience of 500 horrified onlookers, during the New York meeting of the Pacifica National Board.

Another example. Just recently, a virulent public race-baiter was promoted to reporter on WBAI's news staff. His name is Fred Nguyen. Of all the anti- White racists at WBAI, Nguyen is among the crudest and most straightforward (as you will see from the quotes that follow, three paragraphs below).

Program Director Bernard White was well aware of Nguyen's 4-year history of virulent =96 and very public =96 anti-White outbursts on the list-servs, and at public venues throughout our signal area.

(Especially after he received a copy of my expos=E9, "When is a racist not a racist at WBAI?" that cited those remarks in detail.)

I suppose we should regard Nguyen's promotion to on-air reporter as =96 what? =96 a reward by the Program Director for good behavior? A recognition of his exemplary service as "attack dog" for the tiny clique of partisans that maintains control of WBAI's management and internal administrative processes by labeling all opponents as "White supremacists"?

Does no one feel that it shreds the credibility of our news department to have an on-air reporter like Nguyen, who is on public record as hurling thuggish racial epithets, like the following:

=96"self-selected white navel gazers,"1

=96 "white know-it-all lefties," 2

=96 "white suburbanite,"3

=96 "White supremacist,"4

=96 "WBAI is ... a...COLORED community,"5

=96 " [white] bigot,"6

=96 "[this is] a white people's list"7

=96 "angry white man,"8

=96 "white boys,"9

=96 "the white man's problem that you and the members of your pack demonstrate,"10

=96 "white men like you,"ll

=96 "white ageing guys,"12

=96 "ageing white leftists,"13

=96 "Your theory of democracy is ... all about white power,"14

=96 "[you are] a self empowered white man who judges other cultures through the lens of a historical predisposition to daily lynching,"15

=96 "No wonder people of color don't trust the white man,"16

=96 "[You support the] lynching mood that is being unleashed against ... [someone] supporting black radicals and people of color"17

=96 "Hitler, himself, used such methods [as yours] ... You're going to have to do better than proposing insipid visions of a color-blind world,"18

=96 "people who oppose affirmative action and call it "quotas" ...[are] racists,"19

=96 "[he] believe[s] that Pacifica should be controlled by white people since Lew Hill happened to be white,"20

=96 "[You] want [to]...reestablish white supremacy in the network, with some colored tokens, just to save the appearances,"21

=96 "[He] and his friends [are] ... trying to disenfranchise the mission constituencies, by denying them a seat at the Pacifica table. White people are always better at 'winning' elections because they have become masters at the art of trickery,"22

=96 "You and your friends are trying to perpetuate white power over Pacifica, and my role is to stop you,"23

=96 "I have a serious problem with the ...warped view ... you and your colorless friends have of diversity,"24

=96 "With all that color blindness and guilt surrounding these smart people ...there is an identity crisis in some so-called white leftist quarters,"25

=96 "the climate of 'whites know best' in this movement is responsible for keeping many constituencies away,"26

=96 " Stating that self-respecting people of color would stand for the racial antics of some of the leaders of the EC takes dream as reality,"27

=96 "she makes a lot of demands for someone who represents perhaps a handful but a vocal group of white folks,"28

=96 "[She is] opposed to any power sharing with people of color and bitterly opposed to people of color leading WBAI"29

=96 "She would not mind an all white LAB"30

=96 " It is very shameful that a sliver of mostly white so-called democrats, who do not represent the listeners at all, would make this attempt at a power grab."31

Who were the above remarks by Fred Nguyen directed against? Every single one of those anti-White smears quoted above was specifically directed, by name, against Carol Spooner and Leslie Cagan (both at the time directors of the Pacifica National Board), Larry Romsted, Dave Fertig (another PNB member), myself, and many others during the struggle to create a new set of bylaws for the Pacifica Foundation.

He has not stopped making these remarks. And he is still a reporter on WBAI's airwaves.

Then there is Janice K Bryant. This WBAI producer was a member of the search committee assigned to find a new general manager for WBAI about 2 years ago.

One day, while on the air, this prominent, influential, and respected WBAI producer

=96 a frequent on-air co-host, personal friend of Bernard White, member of the WBAI LAB and also a national director of the Pacifica Foundation (!) =96 nonchalantly informed her listening audience (actually boasted) that

"... the only way there'll be a white station manager at WBAI is over my dead body."

She was forced to resign from the search committee =96 not because WBAI's management felt she had done anything improper =96 but because management was informed by WBAI's legal counsel that if she remained on the committee the station would be liable to lawsuits from

White candidates who did not get the job, and that the station would probably lose those suits and be subject to huge financial damages.

Here is another stupid (but not less dangerous) recent example of "white- trashing"on WBAI's airwaves.
I refer to Kamau Kalfani's program,

Under the Learning Tree (or Under the Bigotry, as many call it) on which a supposedly serious discussion was predicated on the notion that the sexual inadequacy of European White males is why Whites are predisposed to kill Blacks.

And that Black women shouldn't seek out White men as sexual partners, because they smell bad as a result of not having any "smelanin."

The audio clips are up on the net, uploaded by talkingsticktv@yahoo.com [ca. 30 minutes into segment wbai-200030731-0259.mp3].

On another Kalfani show of only a few months ago [see

http://www.radio4all.net/proginfo.php?id=3D6093] WBAI listeners were treated to a learned presentation in which it was pointed out that the word "Jew" was derived from the word "jewelry.")

Or perhaps vice-versa, I never quite understood which.) And that "the Jewish community is the spoiled brat of America."
And not more than a week ago, a WBAI producer attacked me, at an LSB Membership subcommittee, for placing ads =96 that I had created to obtain new WBAI members =96 in publications such as

The Nation magazine and The New York Review of Books. (The ads offered CDs of a WBAI broadcast of Gore Vidal as a membership premium.)

What was her reason for attacking the ads (the first of which, incidentally, has already netted the station approximately $18,000 in profit and 500-600 new members in just 6 weeks)? She explained (in front of the other 10 or 12 committee members) that "we don't need any more rich liberal White men in WBAI's membership."

She also suggested that perhaps I ran those ads, right before the upcoming LSB elections, in order to "pack" our membership rolls with "rich white liberals who won't be expected to vote for people of color." Is this supposed to be a "respected" WBAI producer, role model, on-air personality from whom listeners are supposed to learn about tolerance, diversity, harmony between the races and fulfillment of the Pacifica mission?

As you see from the above, there is simply no shortage of offensive behavior and language in and around WBAI, most of it supplied by a tiny segment WBAI management, producers and staff =96 who, unfortunately, completely control what goes on the station's airwaves, what appears on the station's website, what appears in the station's e-Newsletter to listeners, and what appears in the station's Folio that is mailed to the listeners.

So I could go on and on with examples. .
But why bother? So many listeners know about these and similar examples of race-baiting, "White-trashing," anti-Semitic remarks, and physical assault that I do not need to belabor the claim.

I can only deplore the fact that even good people at the station have become so desensitized =96 or are in such denial =96 that they cannot even hear the ever-increasing onslaught of racist garbage that is being dumped on WBAI =96 dumped with what, I must assume, is the permission, if not outright approval, of our program director and the rest of our management team.

I don't know if everyone has seen it, but there is a Code of Ethics on the Pacifica Foundation website. It proclaims that
"the organization [Pacifica] shall avoid the following: Messages which fuel prejudice, hatred, or intolerance."

Clearly the best way to "avoid" such messages, is to avoid tolerating or associating with those who preach such messages.

That means taking a principled stand. It means not allowing ourselves to become moral cowards =96 whether out of "White liberal guilt" or out of fear of becoming the target of vicious and manipulative name-calling and race- baiting.

One way to confront the problem is to stop describing it in "abstract" terms and being naming those who are responsible. How many are willing

to do that?

Not many. Some of our leaders keep retreating behind convenient, evasive (and risk-free) requests for ever more extensive "factual substantiation" of race-baiting, "White-trashing," anti-Semitic remarks, and physical abuse before they will act =96 which means, of course, that however many verified instances of such racism are brought forth, they will never be accepted as "enough" or "sufficient."

Or they will be characterized as the "only" instances =96 the rare exceptions rather than the common rule. Or they will simply be brushed aside, with assurances that, if such "transgressions" ever did occur at WBAI in the past =96 they are no longer occurring now.

So we arrive at this very practical question. How do we gather enough "factual substantiation" of race-baiting, "White-trashing," anti-Semitic remarks, and physical abuse to justify action by management, by the LSB, or by the Pacifica National Board? And by action =96 let me make it absolutely clear =96 I mean immediate and outright dismissal (for "cause") of those who have violated their responsibility not to "fuel racial prejudice, hatred, or intolerance" at WBAI.

Unfortunately, most listeners do not have the foresight, or the resources, to sit before their radios day after day, with tape recorders and memo pads in hand, in order to memorialize offensive anti-White statements as they occur =96 complete with references to the program, the time, the date, and the track =96 so that such statements can be instantly located and publicized, as was able to be done with the "lily white/nigger" statement, quoted above, of Erroll Maitland (who even his friends ruefully admit is a stone cold racist, although only behind his back).

The inability to pull racially offensive air-checks out of a hat, on a moment's notice, does not mean that such remarks have not been made in profusion, by many WBAI personalities, on numerous occasions.

It is sad that a member of the LSB, when shown Maitland's remark about "lily White liberals" and "niggers," said that

"... if Erroll [Maitland]'s [racially offensive] statement had been broadcast over WBAI, there would have been a major protest from [our] listeners, black and white."
Does anyone believe this now?

The fact is, WBAI listeners have indeed been protesting this abusive language and behavior for years? They have complained -- by the hundreds and perhaps thousands -- via postal mail, email, telephone, at LAB meetings, at LSB meetings, at bylaws meetings, at Concerned Friends meetings, and even (when possible) on call-in shows to Samori Marksman, to Valerie van Isler, to Djabel Faye, to Bernard White.

But they were simply ignored =96 or worse, told in stinging on-air rebukes that they were talking like white supremacists who can't stand

to see a strong Black man (or strong Black woman, as the case might be) in a position of power or authority.

What complicates this issue even further is that anti-White material is not usually broadcast in as crude and as stupid a manner as Erroll has done (although sometimes it is).

Usually it is a matter of suggestion, or inuendo, or double meanings =96 in a context that gives the perpetrator a cloak of "deniability," such as will allow him or her to look one straight in the eye and say, "You must be mistaken; that's not what I meant at all."

I would now like to add a "pre-emptive" footnote:

I am sure that there will be some who will not attempt to answer the above arguments with counter-arguments. They will, in fact, ignore my arguments and simply claim that I am a racist. Their proof will be =96 simply =96 the fact that I, a White person, have dared to criticize a Black person.

This kind of thing is happening more and more at WBAI.

I see it at LSB meetings -- where, two sessions ago, you may remember, a woman in the audience was asked by a board member, in a rather neutral way, merely if she had jotted down a particular point, only to have that woman jump up and launch into a 13-minute tirade, at the top of her voice, about how dare that board member talk to a Black woman like that, and how she would never have spoken to a White woman this way, etc.

And I see it at committee meetings -- where, as was reported just a few weeks ago, racially inflamed acrimony over a matter that had nothing to do with race resulted in screaming fits, walkouts, and, if I heard correctly, some chair flinging.

I attribute this increasing incivility and race-baiting, in and around the station, to a corrosive atmosphere that has been encouraged and enabled by crude and inflammatory racist statements (there is no other word for them) of people like Erroll Maitland, and the much subtler but no less destructive utterances of people like Bernard White, who use the airwaves to hint at some vast conspiracy to suppress people of color and turn WBAI into a White fiefdom.

That is the gist of three years of innuendoes, sly digs, and unflattering remarks by the program director on air about certain people in the WBAI community, and more recently and more frequently about members of the Local Station Board, often by name, in unflattering contexts.

Mr. White has consistently used the airwaves to undermine the Pacifica bylaws, the credibility of the new LSBs, and -- most insistently -- the authority, appropriateness, and validity of listener participation in WBAI governance. And race-baiting has been his "argument" of choice. (As when he speaks on-air about sinister people among us who seek to "change

the physical complexion" of Pacifica.

Virtually all of the racially offensive quotes I used as examples above seek to instill in listeners' minds the false belief that Blacks are a tiny and beleaguered minority at WBAI, under constant threat of being submerged by an onrushing tidal wave of White racist listeners who are frantically attempting to "take over the station" and "push people of color out the door."

That this scenario is not only untrue, but so far removed from reality as to be ludicrous on its face, has not seemed to deter Bernard or Erroll or some of their acolytes at the station from behaving as if the anticipated White assault was not only a reasonable prospect, but was in imminent danger of become an actuality in the very moment.

The fact is that for the last 15 years the station has been almost totally run by African Americans and people of color. That includes all of its top paid and unpaid positions, as well as management itself.

And the myth of a White Conspiracy to take it over is just that =96 a myth.
No one cared that WBAI was almost totally run and staffed in its top echelon management and departmental positions by Blacks. Because WBAI wasn't a "Black station." It was simply a good station.

Now it is a station with a narrow and strident agenda whose management is attempting to sow racial disharmony where is did not exist before. Mostly this appears to be a tactic for gaining personal power.

Just for the record, people of color now hold virtually all of the top paid positions at WBAI. To wit:

ADMINSTRATIVE: General Manager, Don Rojas; Business Manager & Fiscal Officer, Indra Hardat; Accounts Payable & Assistant to the General Manager, Yvonne Singh; Subscriptions Director, Evelyn Andino; Premiums Director, Paul Ashby; Premiums Assistant, Lambert Marksman [deceased 6/5/04]; Outreach Coordinator, Bok-keem Nyerere

PROGRAMMING: Program Director, Bernard White; Assistant to Program Director, Shirley Irons; Public Affairs Director, Kathy Davis; Producer of Wakeup Call, Sharan Harper; Host-Producer of Wakeup Call, Deepa Fernandes; Host-Producer of Wakeup Call (Fridays), Mario Murillo; Host-Producer of TalkBack, Hugh Hamilton; Co-Host-Producer of TalkBack (Fridays), Earl Caldwell

NEWS STAFF: News Director, Jose Santiago; Producer-Host of Election Coverage, Robert Knight; Reporters, Eric Williams, Ian Forest, Barbara Day, Gail Walker, Fred Nguyen

OPERATIONS STAFF: Chief Announcer/Engineer, Michael G. Haskins; Maintenance Engineer, Graceon Challenger; Production Engineer, Dred Scott Keyes; Engineers, Errol Maitland, Shawn Rhodes, Sidney Smith, t-dub.

But the myth of the threatened Black "minority" at WBAI has been a useful myth for those who seek to sow hatred and divisiveness as a means of maintaining their personal power and privilege.

Unfortunately, just because something is not true does not mean that a large number of people cannot be made to think it is true.

And although the alleged spectre of White Racism at WBAI is no more real than the alleged spectre of Weapons of Mass Destruction in Iraq, people like Erroll Maitland and Bernard White are trying very hard to make it appear true..

Sadly, this has simply encouraged people to shout "White racist!" when they have a disagreement =96 instead of debating the actual issues involved.

And eventually, even those being falsely accused may start to feel vaguely guilty =96 and begin to wonder if perhaps they actually had been doing what they damn well know they were NOT doing.

That is analogous to right wing "demonizing" techniques =96 as when people like Rush Limbaugh and his Fox network cronies bemoan the supposedly overwhelming preponderance of "liberal media" in this country, until this total fabrication (and could anything be further from the truth?) is almost totally believed by most of the electorate.

It is sad to see at WBAI. And I look forward to the day when it this is no longer the case.

Regards,

Steve Brown

=3D=3D=3D

i too have heard some dj after bob fass's show play gangsta rap with
all the 7 words kept in and with the phrase clearly repeated many times
"kill the P" where it was unmistakenly meant to mean "kill the police"
which if any listener who is demented claims as a defense they were
goaded by the music and comments of a particular dj on wbai would spell
the end of wbai,

yet when i complaineof a similar instance to keyes and pointed out
on-air that it was a licensure and litigation and liability issue, I was
told "well you can always turn the dial" and was cut off.

so much for anyone in charge of wbai caring what happens to wbai other
than what they can loot from it in the short run till their fuhrer's
contract runs out.

racism is always dumb.
and those who espouse it always stupid...and usually do so to cover up
their own psychic or personal integrity deficits.

but when people are allowed to use force to enforce their barbarity,
well, and lies to justify such bullying, maybe it is time not to pay
them to do so. ix_pho.

Isn't communism just a red herring? Kudos to those who figure this one out!
;-)

IDing the specific genre of statism doesn't make it a red herring. It's
only that to the extent that arguments in the Left about broadcasting
racism is a real issue. Since most of the Left is racist, this is only
news because another Leftie actually broke ranks and complained.

Hi everyone in the group.....I have a nice Kenwood TM-741A Triband Mobile radio...It has 144 mhz / and 440 mhz in the radio...However, the 144 mhz (2 meter Module is not functioning...The Radio has all the modifications...I have the owner / operator manual...I'm looking to trade the radio for Either a Johnson Killawatt Tuner...or a James Millen 2 killawatt tuner...Tuner must be in good working condition...and it would be nice if it was also cosmetically in shape....

Carl N2MFW

P. S. I will take cash if the offer presents itself...

Oh my, that was a compelling argument, wasn't it?

Look, I had an acquaintance, as Red as they come, who was a programmer
for KPFA and who gave me a blow-by-blow during the attempted
Pacifica-putsch. I'm all in favor of them pumping their bilge into the
aether, but whether one of their stations actually lives up to its
professed ideals is about as interesting to me as the probable-chain-of
succession in the RCP when Chairman Bob dies.

Hi all I am after some parts for the Icom M-800 HF Marine Radio

I need a remote controller unit with all the leads and I need another set of connector leads and a mic Oh and the proper DC Leads :0)

does any one out there have any of these parts or any contacts for these parts ????

I have two Radio bodies and one controller but no connector leads or mics ..

The controller part number is EX-803 Remote Controller
DC Power cable for Controller 12v-1 amp OPC-089A
Interface Cable for Controller OPC-172A

Main Unit Power Cable 12v-30 amps OPC-077

Also is there a mod available to get general coverage TX ???

Please feel free to reply to my email.

maleaton@bigpond.net.au

My Kindest Regards to the Group.

I would send you to www.symantec.com which has tools for removing the
viruses roaming now that infect your machine without being opened in email
attachments and links to the real patches put out by Microsoft.

I find it difficult to believe that anyone in this day and age would open
any attachment that comes through email without knowing who it is from and
exactly what it is but it seems folks are still doing that. There are two
emails right now that are cleverly done. One looks to be a returned message
from your server or Microsoft that you sent out. IT ISN'T!.   The other
claims to be and looks like a patch from Microsoft. Microsoft NEVER NEVER
NEVER sends out patches.

If you don't know, you can right click on messages and look at their
properties. That is one way you can see if an attachment is not legit but
you have to know enough to recognize it.

Clicking on that link gives you:

YOU HAVE JUST BEEN RECRUITED AS DMXDVC'S THUG!

By visiting this page, you have just recruited 1 thug for dmxdvc, increasing their chance of winning the prizes! dmxdvc now has 5853 thugs and is getting stronger every day, it is upto you to beat them.
Good Luck!

So don't click on it.
Adrian

How does royalty work for music played on the radio?

Is it simple like, every time "Fire and Rain" is
played by a mid-sized radio station, James Taylor
gets $2?

(That sounds so sweet for hitmakers.)

Thakns.

$2 sounds a bit high. Check this out:
http://www.bmi.com/songwriter/resources/pubs/royaltyradio.asp

>
> (That sounds so sweet for hitmakers.)

It's sweet for hitmakers (though it's 12 cents according to BMI's
site); it's sweet for hitmakers but sucky for those who have bonafide

charted hits. Since BMI's method of divvying up royalties is based
for the most part on radio airplay (and not on jukebox plays, record
sales, and the like), if your tune isn't played in heavy rotation, the
slice of the royalty pie becomes very small indeed, often not more
than $1 to $5 a year.

Because as an author or publisher, you may belong to only one
licensing agency (ASCAP, BMI, or SESAC) at a time, what you get paid
for your output gets thrown into the pot and goes to people like Paul
McCartney and Michael Jackson, who own a huge percentage of the music
out there.

For this reason a lot of musicians who compose and/or distribute their
own music these days often *don't* join any of the licensing agencies.
 This means they're not likely to get played on the radio, but whoopee
-- it's unlikely they're going to get played anyhow.

Some cheap-ass talk radio stations don't use bumper music because it
is too expensive. [KDWN in Las Vegas for example.] What are the costs
related to playing music from the other side, i.e. radio station
instead of artist?

Bruce Hornsby's "the way it is" has to be the most "bumpered" song
ever. I hope he made a bundle.

The pricing is a significant part of a station's budget. Add ASCAP,
BMI, and SESAC's royalties together and this can often be the
second-biggest cost in running a station after staff costs.

It stands to reason, though, because without the music, music stations
would have nothing to play except songs written prior to 1923 (the
latest date we can say it's 100% guaranteed that there is no copyright
on the music).

> Bruce Hornsby's "the way it is" has to be the most "bumpered" song
> ever. I hope he made a bundle.

If I'm not mistaken, a song doesn't count as as requiring a license unless more than 1 minute is played of it. When I worked in talkradio, theme music was something like 50 or 55 seconds to make sure that there was no way it would slip above the minute mark.

I do know that when I used to fill out the BMI forms as a DJ, there was a spot to check if the song was used as a theme. However, I think that was done to better calculate how typical the use of a song was when calculating royalties for the total number of stations in the country.

That seems a bit exaggerated. Music licence fees seldom exceed a range of
2.8% to 3% of staiton gross billings.

Things that would probably be more at all but the biggest stations:
utilities, rent, agency commissions, sales expenses other than commisssions,
ratings services, insurance (including liability or self-insurance limits),
promotion, advertising, etc.

Wrong. Talk staitons usually have a licence that covers incidental use of
music, both in commercials and in bumpers or even in interviews. The length
of the sample is not relevant.

These forms are done as a dump of computer music scheduling logs now for
music stations, and I have never seen a talk station itemize (although I
guess they should). They just have the limited license.

I've seen total royalties amount to as much as 10% at one station in
the past (KWUN Concord), which caused the owner no end of
hair-tearing. This was some years ago, so things may have been
adjusted or I was looking a peculiar situation.

> Things that would probably be more at all but the biggest stations:

Yeah, I guess I'm a bit rash. Let's say in the top 5?

> Wrong. Talk staitons usually have a licence that covers incidental use of
> music, both in commercials and in bumpers or even in interviews. The length
> of the sample is not relevant.

The station I worked at at the time, KKEY Portland, did not pay any
music license fees at all. For the local spots they used an old
royalty-free production music library (CRC or Tanner maybe?). This
was where I got the 60 seconds or less concept. They literally carted
the theme music at :50 or :55 (I forget) and told me it was to get
around license fees.

I have no doubt that larger stations such as KGO get blanket licenses
covering all this stuff. But the smaller guys? I have a feeling such
things exist today.

> These forms are done as a dump of computer music scheduling logs now for

Well yes, it's all dumped today, but I know that they did make the
differentiation between songs used as themes and other songs. I don't
know why they would change that, since using a song as a theme would
skew its play significantly, making the license logs an invalid
sampling of the whole of the industry.

Ever think about how the right wing talk show hosts use music from
liberal artists. Chrissy Hind / Rush Limbaugh comes to mind. Weiner
and Metalica or Hendrix. Maybe these right wingers are closet
liberals, more than happy to fund the left wing cause with music
royalties.

Now imagine if the right wingers wanted conservative musicians to do
the bumpers. That would leave us with: Ted Nugent, Toby PO'd Keith,
and Charlie Daniels. A pretty lame group of musicians IMHO.

Must EVERYTHING be in terms of "conservative" and "liberal"?

No, I don't think about that. But what I've always thought since Rush began the trend to use bumper music was how much time is wasted each hour. If each bumper is 10 seconds and there are 6 spot breaks per hour plus 30 seconds of theme music, that 1.5 minutes wasted out of each hour. That doesn't sound like a lot, but considering that a given talkshow might have 35 minutes of actual program time (don't forget the hourly news, the traffic, and weather), that 1.5 minutes is 4% of the program for just music.

I think if the theme music wasn't being played, the host would utter
more of the junk phrases to announce the show is back. [Time and host
name, etc.] People tune out the commercials, either literally or
mentally. I don't think you can go back from a commercial right into
the show without some sort of buffer.

The bumper announces the show is back. It is probably a good idea,
even if Limbaugh is behind it. ;-)

KGO was #1 in the ratings long before Rush Limbaugh introduced bumper
music. There weren't any junk phrases. The talkshow host would
simply announce the time or their name and go right back to the calls.

It may be that Jim Dunbar (original program director when KGO switched
to talk) established the formatics of going directly back into the
program due to his previous top-40 radio experience.

> People tune out the commercials, either literally or
> mentally. I don't think you can go back from a commercial right into
> the show without some sort of buffer.

KGO and most other talk stations did this for decades and were none
the worse for wear because of it. And as I said before, KGO was #1
prior to the use of bumper music.

Also, research says that people's attention peaks during any program
event change, but especially during dead air.

I had always understood that the Pepper-Tanner packages were roylalty free;
but, using stingers from other works were not. I believe that there were a
couple of different companies that sold jingle packages (similar to the
Pepper-Tanner packages) where license fees had to be paid. But that was
some time ago and things might be different now. I know that Pepper-Tanner
has ceased to be.

"My City Was Gone", actually. From "Learning to Crawl".

Probably all the clearing stations have the abbreviated ASCAP/BMI licenses and
it's handled that way. Dunno how RIAA or Harry Fox collect on the mechanicals.

There are no artist or label royalties in the US on analog radio.

I was actually talking about the production music packages from such
sources as Tanner, CRC (that's getting *really* old!), CBS, etc.
These disks had mostly music beds and stingers. All were
royalty-free. (Well, not really, because the royalty was paid in the
purchase of the libraries. I remember one package of I think 5 CBS
production music records that went for something like $600.

However, I do remember hearing some P&T jingle production music for
various national sponsors like Chevy, Kodak, etc. They were all
original tunes and quite horrible. None were usable for any purpose
except perhaps a joke reel.

Can I chime in here? Who or Where does it say Rush invented bumper music?
Perhaps he was the first to use rock. But I seriously doubt he was the first
to use bumpers at all!

Can you cite an example of a radio telephone talkshow that had bumper
music prior to Rush Limbaugh?

The only example of anything approaching bumper music I can think of
was the announcements at the end of the spot clusters on Larry King's
Mutual radio program. "To phone the Larry King show, call 703..." I
don't recall if these had music in them or not. If any, it was
perhaps his theme song, and these announcements were only used at the
end of a spot cluster that included local inserts, not all spot

clusters.

I don't understand your distinction between "hitmakers" and "bonafide charted
hits". It sounds like you mean current hit songs will make more than
"catalog" songs because of radio airplay.

>for the most part on radio airplay (and not on jukebox plays, record
>sales, and the like), if your tune isn't played in heavy rotation, the
>slice of the royalty pie becomes very small indeed, often not more
>than $1 to $5 a year.

You mean per station, right?

12 cents a pop sounds like a lot of money to me. AC/DC's got to be rolling

That web site originally mentioned mentions 90 seconds for a performance.

So does the incidental license pay a different rate to the performers?

On playing the recording, that is.

There's composition royalties, paid to the composer through
ASCAP/BMI/SESAC/Copyright Control Inc.

"John R" <justhdrive@earthlink.net> wrote:

> I find that hard to believe that AM doesn't pay royalties.

There are different kinds of royalties. Royalty systems are set up to pay the (1) author or composer, (2) publisher, (3) artist, (4) company making the original record. In the U.S. radio stations and public performance places (bars, nightclubs, concert arenas) do not pay royalties to the last two.

Jennifer Lopez can sing until her tonsils fall out and she's not going to get any royalties for her performances on the CDs the radio stations play.

Many people heard of ASCAP and BMI before the Napster situation, but few had heard of the RIAA. That's because ASCAP, BMI, and SESAC respresent the composers and publishers only. RIAA represents the artists and record companies. Because computers are able to make duplicate copies of CDs, RIAA wants to collect royalties for every copy made, just as they now collect royalties for every copy sold in record stores.

This is totally independent of the performance royalties, which are paid by every known radio station, dance club, and corner bar -- and even companies with music-on-hold.

Yeah -- JFM / TKO / Horizon - Great Times
Then the boom in late 80's (Lightning/Centre Force/Fantasy) and the latest boom NOW!
I live in East Essex and in addition to the many local pirates, with a decent aerial & tuner I have always been able to pick up much of London.
Yesterday I went to Canterbury (Kent) and I could still hear Southend-on-Sea's Premier 88.6.
Don't miss out!

i remember almost wetting myself listening to the "drum&bass" pirates in
london about three years ago - so unproffessional, and thay talk all over

the records they're promoting - giving shouts out. how does that prome their music, if you can't hear it? feel sorry for listeners of the legal stations as, after 7 , you can't hear them!

Um, that's not true.
And, by the way, analog radio implies both FM and AM broadcasts. Since the
only commercial digital radio are services like XM and Sirius, etc.

Um, yes it is true. David Eduardo knows whereof he speaks. Radio and
TV stations pay royalties only to music publishers and
songwriters/composers, through the organizations ASCAP and BMI.

Internet streams are a separate matter.

By LARRY BONKO, The Virginian-Pilot
© September 19, 2003 | Last updated 8:29 PM Sep. 18

Thank heaven for good old-fashioned radio.

With the approach of Hurricane Isabel on Thursday morning, power was lost in thousands of homes in Hampton Roads -- thousands of television-owning households.

That meant no Triple Doppler TV forecasts and no updates from The Weather Channel, which had dispatched Mike Seidel to the Virginia Beach Oceanfront as early as Wednesday evening.

How did TV-deprived Hampton Roads keep up with the storm and the damage it was inflicting? R-A-D-I-O.

As early as 4 a.m. Thursday morning, AM radio station WNIS was on the air with reports of the storm's approach. Later on Thursday morning, when the electricity cut off, local radio stations joined with the three Hampton Roads television stations (WAVY, WVEC and WTKR) to get the story out to residents with battery-equipped radios.

WVEC's storm coverage was heard on WCMS-FM and WWSO-FM.

``Let's go now to Channel 13's coverage . . .''

WAVY's live team reporting was fed to WNOR-FM and four other stations. WTKR had hooked up with WKOC-FM.

About 2 p.m., WAVY weather reporter Don Slater, aware that he was speaking to a large radio audience, began to provide talking pictures of windswept scenes that residents could not see.

``I realize that a lot of you are listening to us on the radio,'' he said.

Jeff Lawson on WVEC also became a TV meteorologist-turned-radio-reporter.

``Don't forget that we're under a tornado watch . . .''

Channel 10 reporter Patty Culhane was heard by radio listeners describing the stormy scene at the Oceanfront as ``getting uglier and uglier.''

Most of us had to picture it. It was theater of the mind.

At WWDE-FM, program director Don London said the staff was aware that TV signals might be lost and radio would become the eyes and ears of storm coverage.

``Led by our old warhorse, Dick Lamb, we were prepared to pass along updates and information with no hype,'' London said.

On WAVY late Wednesday night, Slater had outlined the projected path of Isabel, saying, ``Tomorrow will not be a fun day.''

It was indeed a horrid day, but made less so by the merging of radio and television.

Reach Larry Bonko at larry.bonko@pilotonline.com or call 446-2486.

By Brooke Shelby Biggs, The Nation
September 18, 2003

Clear Channel is destroying radio. At least, that's the popular mantra these days. Radio consolidation - which shifted into high gear with the Telecommunications Act of 1996 and has been fostered by a pro-big-media majority at the Federal Communications Commission - has resulted in the Wal-Martification of radio. Across the nation, stations are being gobbled up by huge chains like Clear Channel, which then monocrop their playlists. It's the same fifty mindless cookie-cutter songs played in an endless, soul-numbing loop, the same conservative talk shows, even the same deejays doing the same shows for simultaneous broadcast in a half-dozen markets nationwide. Jockeys are losing their jobs as the big chains consolidate and centralize their work forces. There, in the distance, is the faint swan song of independent radio. Abandon all hope, ye who flip thy radio dial...

The only royalties a "terrestrial" (AM or FM or SW) station pays are author
and composer royalties, not artist or label royalties.

We pay ASCAP, SESAC and BMI (And a few pay ACEMLA, too). All are societies
that collect on the rights for public performance payable to the composers
and authors of songs, not specific interpretations (artist and label based).

And that is because (bingo!) they are digital streams, covered by the
Digital Millennium act.

That is a hairy question. It certainly would seem to be a digital stream,
huh?

And the Digital Millennium act also has a bunch of restrictions like
sequential play of cuts form a single album, frequency of artist and song
rotation, etc.

Most of them are totally incompetent, and shouldn't be allowed to use a receiver let alone a transmitter! Almost all are seriously overmodulated, and many are within 200 kHz of licenced stations, causing huge amounts of splatter. "Legal" enforcement actions are totally ineffective, and there are rumours of payoffs to the "authorities".

Up for auction, and closing shortly, a General Radio Company Vintage
650-A Impedance Bridge
I have just located the original manual for it, which is worth the price
of price of the unit alone.
See and bid:

Hello!

Today I added a few pictures to my site about life on base, at Soesterberg AB, the Netherlands.
This page started with some photos of AFN presenters, and then I added photos of buildings and studios.
Now I found I had a few slides with scenes of American Football on base. Unfortunately my scanner isn't very good. But you'll get the idea of the good times at SAB.
Please check out my Ranger49 page.

Aljo_

Just in from
laserradio@yahoogroups.com

In association with our Dutch partners, Laser Radio Limited has successfully applied for broadcasting licences in the Netherlands. With our Dutch partner Quality Radio, we have won the following AM broadcasting frequencies:

828 kHz, 1035 kHz, 1224 kHz, 1395 kHz and 1557 kHz

Andrew Yeates, Managing Director of Laser Radio Limited said 'This is a tremendous result and shows the strength of our applications and future plans for AM broadcasting. We have some exciting programming planned, which will transform AM listening across the Benelux and surrounding markets'

Managing Director of Quality Radio, Ruud Poeze, was equally delighted with the result and was looking forward to building a strong radio brand in the Netherlands.

The broadcasting licences will be valid for an eight year period.

I would be very grateful if someone could answer the following question:

For an antenna operating in receive - What field strength present on the
antenna will result in an power output of 3W? The gain of the antenna is 1
(0dBi) and perfectly matched into 50ohms.

Hi OM,

Looks like you should be consulting the work of Tesla. Be warned he
went mad and broke (don't know which order) trying to fill a load with
significant power transmitted cross town (Colorado Springs).

Now, I only start with this presumption because the wording of your
question lacks a significant amount of detail.
     How tall the antenna?
     What frequency of operation?
     What separation of transmitter from receiver?

What power in transmitter?

Field strength is specified in volts/meter and you already know how many volts you need for 50Ohms to render 3W, it remains to be seen if the structures and frequency support that value.

One does not ordinarily speak of power OUTPUT from a receiving antenna (true, that is what is available and sought, but typical antennas rarely offer anything but milliWatts at very close range). If you wanted 3W from a 3W transmitter, you would use direct connection (skip antennas altogether). If you wanted 3W from a 6W transmitter, you need a similar antenna within the space that one would knock down the other if it fell. A direct connection is simpler still. If you wanted 3W from a 60W transmitter, you will still need to be quite close and it would be hard to not extend that direct connection instead. Square-Law is going to kill you unless you are next door to a half-megaWatt VOA site.

Thanks Richard

More information: The antenna is an active dipole. There is a 3W RF limiter on the output which connects directly to a low noise amplifier (LNA). So the antenna can cope with up to 3W on its output before any damage to the limiter or LNA. I need to know the field strength as I have a transmitter within 10 metres transmitting 100W into another dipole at the same frequency as the RX !! (the receiver is isolated).

So I need to know what the field strength in V/m will produce 3W on the output of the antenna?..... Anyone know how to tackle this problem?

Thanks

Hi OM,

You still have a lot of unknowns.
     What frequency?
     Are the antennas in the same polarization (horiz/vert)?
     What is the gain of the "active dipole" amplifier?
     Is the LNA the active part of the "active dipole?"
          (It doesn't seem to be so by your description.)

This may be academic because you say the output is limited to 3W.
     What is the power input limit of the LNA?

If you are operating HF,
     Why are you using an LNA?

If you are not operating HF, but rather VHF (2M) you are probably OK,
but in all reality that is an issue with the input power ability of
the "active dipole" amplifier, not its output.

Sorry If things look a little confusing....

=> The active dipole consists of a RF limiter and LNA all in one package. The maximum input power to the LNA is 100mW before damage. The limiter limits power levels between (50mW and 3W) to 50mW - which is fed into the LNA. The RF limiter can withstand 3W before damage. To solve my problem all you need to know is that more than 3W will damage the antenna.

So looking at it a different way I wish to know what is the maximum field strength that can be applied to the antenna before damage? (with the TX and RX antennas copolar (vertically polarised) at 2m).

How do I calculate the field strength, knowing the gain of the antenna (0dBi), the output power from the dipole (3W), if I assume that the impedance is 50ohms? Are there any other quantities that I am not taking into account? Does the impedance of free space (377ohms) come into it?

Assuming you get an answer to your first question, I am going to jump to
the second which you have not yet asked!

Where do I get a calibrated [accurate] field intensity meter? BTW, they
are moderately expensive.

Yes you are right they are expensive...

I have access to a calibration dipole and spectrum analyser to make a
incident power measurement. I can then calculate the field strength from
this no problem. (Just having trouble solving my orginal problem).

Hi OM,

Barring quite a number of questions left unanswered, have you
considered the potential of blowing out the front end of the spectrum

analyser to make this measurement?

Do you know the instrument's maximum power tolerance?

Already made some preliminary measurements, used a 20dB attenuator between
the cal dipole and spectrum analyser (as a safe guard), everything was

OK..... Hence I know the field strength where the active antenna is
going to be placed, just don't know what field strength will damage it....

Hi OM,

I don't understand.

Why do you need the computation when you already know the answer?

The one critical piece of missing information is the frequency or
wavelength. Manipulating some equations from King, Mimno, and Wing's
Transmission Lines, Antennas, and Waveguides, the field necessary to
generate a particular power P in a load connected to a receiving antenna is

   Erms = (1/WL) * sqrt((240*pi^2*P)/G)

where Erms is the RMS field in V/m, WL is the wavelength in meters, and
G is a complex function calculated and graphed in the text. (It's f in
the text; I used G to avoid confusion with frequency.) This is for an
infinitely thin antenna parallel to the impinging field, terminated with
the complex conjugate of its feepoint impedance. For a half wave dipole,
G is about 0.82. But a half wave dipole has a gain of 1.64 relative to
an antenna with 0 dBi gain. So a field sqrt(1.64) = 1.28 times greater
would be required for the 0 dBi antenna. Plugging in the numbers,

   Erms = 119.2/WL volts per meter.

It should be possible to confirm this with NEC-2 by modeling a
terminated dipole with an applied plane wave source. (EZNEC doesn't have
the capability to model the plane wave source.)

I have a radio interview about 6 minutes in length with two of his songs
that I recorded with Barry White a few years ago. If you are interested
please contact me.

Sincerely,
Dave Aptheker

(Aside: Thanks to Roy and Kevin for their postings on this subject!
I'm especially glad to see that Kevin still checks in here
occasionally.)

As an experimentalist, I'd suggest simply commandeering the antenna
into which you're feeding the 100 watts for long enough to do a
network measurement between the antennas. Since you really only care
at one frequency, simply reduce the transmitted power to 1W, for
example, for long enough to find the power at the appropriate point in
the active antenna chain. It's a linear system, right? So 100 times
the input power will result in 100 times the "output" power. All that
seems much easier than going through the intermediate step of
measuring field strength...and since it sounds like you may be within
the near field of the transmitting antenna, you may not be accurately
characterizing the field strength in any event.

Cheers,
Tom

July 21, 2003
A Bloody Peace in Iraq

Germany and Japan were not transformed into prosperous democracies overnight after World War II, and it would be unrealistic to expect miracles in Iraq. Yet as the weeks pass, it seems undeniable that the Bush administration grievously miscalculated the human and financial costs of the American occupation. That failure, which is starting to register with Americans of all political persuasions and promises to become an election issue, cannot be easily dismissed with glib assurances of better days to come or Defense Secretary Donald Rumsfeld's favorite refrain that the war ended just weeks ago. This exercise in American power is going to be a lot longer and bloodier than President Bush ever said.

This page opposed an invasion that lacked the endorsement of the United Nations Security Council, and it now seems clear the Bush administration exaggerated its central argument for the mission - the threat of Baghdad's

unconventional weapons. Nevertheless, establishing a free and peaceful Iraq as a linchpin for progress throughout the Middle East is a goal worth struggling for, even at great costs. We are there now, and it is essential to stay the course. But if Washington is to retain the public support needed to see the job through, it can't pretend that everything is on track. The soldiers returning home every week in body bags make that plain.

Most of the administration's critics predicted that Washington would win the war but botch the peace, and so far they have turned out to be disturbingly prescient. The administration seemed to think that when the war ended, Iraq's government institutions, ranging from the army to the waterworks, could simply be placed under new leadership and returned to operation, providing order and basic services to a free Iraq. Everything about the American plan, including the size and composition of occupying military forces, was misconceived. Last fall, top Pentagon officials scoffed at Gen. Eric Shinseki when the Army chief of staff predicted that several hundred thousand American troops might be needed to control Iraq after a war. Today there are 150,000, and the number is expected to grow. Mr. Rumsfeld's defense of the Pentagon's reaction appears to be that it all depends on your definition of "several," and it has not been convincing.

There was also a na[illegible]ve assumption that opposition would melt away once Saddam Hussein was displaced. Recently, with the American death toll mounting by the day, Gen. John Abizaid, the new American commander in Iraq, accurately described the continuing combat as a guerrilla war - a term that image makers at the White House and Pentagon had studiously avoided. The scale of combat is nothing like the guerrilla warfare in Vietnam, but the conflict in Iraq promises to be protracted and expensive. The tab is currently running at close to $4 billion a month.

By invading Iraq without Security Council approval, Washington greatly complicated the task of enlisting foreign help during the postwar period. Secretary of State Colin Powell is now belatedly discussing a new Security Council resolution that would open the way for France, India and other countries to send peacekeeping forces to Iraq. That is critical to easing the burden on American troops.

It is not too late to set Iraq on a more promising course, but that will require the kind of staying power and cooperation with other nations that this administration has rarely shown much interest in mustering.

Very loud & clear in Northumberland on car radio with dodgy window aerial.
Strangely they gave no address for e-mail reception report.

Good the hear "Tiny Goddess" by the original "Nirvana" on the test tape.

Nothing over here (Wrexham), unless I'm too late 9:48 p.m., except some
co-channel from a Classic Gold station on 1017.

I heard it from noon (local UK time) until 14:30 when it went off air.
Wrexham is a long way west, but I'd guess if you can hear Arrow on 675AM
you'll hear Radio London.

> Very loud & clear in Northumberland on car radio with dodgy window aerial.
> Strangely they gave no address for e-mail reception report.

radiocaroline@wxs.nl yes radiocaroline for reception for radio London, this
is the e-mail is of Ruud Poeze the Dutch agent for Ladlon media.

regards from a sunny holland.

peter

I have heard that Uniden is coming out with a new scanner that monitors digital radio traffic? Is this true? If so, is there anywhere in Canada that they be purchase?

Radio scanner hobbiest,
Tom

i search an info about possibilities to decode (not decrypt i know its
impossible) TETRA and GSM this is the 2 systems that are used here GSM
for phones and TETRA for officials uses :)
we have too DECT in 1800 used by a phone compagny

any chance to get digital ?

The uniden scanner is only able to decode APCO p-25 digital..motorola.
in vancouver bc the GE/Errison edac WAR digital system is use by
police/fire....it is not APCO-p25
here is a copy of a letter I received from uniden awhile back regarding digital scanners.

Dear Jay,

Developing the technology for monitoring digital systems is very expensive. In order for it to be profitable there must be mass deployment of that specific protocol into the marketplace in order for Uniden sell scanners for that protocol.

The EDAC Digital System is not widely deployed at this time. Uniden is watching its growth and once it has reached critical mass, Uniden will develop the technology that will allow you to monitor it. However, it currently appears to be several years before critical mass.

Respectfully,

Scott Carpenter
Bearcat Product Manager

Subject: digital police scanner

Hi there
In my community we are using a GE/Erricson edac digtal system for police fire communication
I understand that the new BC250D is only good for APCO25 digital
Is there a chance that a similar unit is produced to to receive edac digital as we may not be able to receive digital transmissions using the BC250D
.

EMS 30712 wrote:

see auction at ebay:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1379419800

For Sale:

One Accutrak record changer Turntable

it is literally brand new in the box with receipts from the day it was purchased.

never set up. stored in its original box in a basement since the day it was bought.

never assembled - original packing styrofoam, inner and outer box. the only thing missing is the 9V battery for the remote control. includes the main unit, lid, turntable mat, remote control transmitter, remote control receiver, spindle, tonearm weight, setscrew, screwdriver, grounded rca phono cables, manual, unused warranty registration card, store receipt, and credit card receipt, the latter of which is dated 7-5-1980. also contains ADC LMA-3 cartridge and stylus attached to the tonearm. the tonearm with its original shipping padding is visible in one of the pictures above; the whole base of the unit is in the original factory plastic wrap and the original shipping retaining screw has NEVER been removed.

the novelty of this unit is its ability to play any track in any order from any of the records queued atop the spindle. the way it accomplishes getting records back up off the platter is with three small metal fingers that extend from inside the spindle and lift the record back past an interlock.

for jumping around different tracks on the same record, the player uses a light activated sensor on the tone-arm to sense the gap between tracks on the record and positions the needle accordingly.

the turntable cabinet has a row of pushbuttons on the front panel, not very visible in any of the pics. the unit has an ultrasonic remote to duplicate the functions of the front panel.

definitely a collectors item.

thank you,

saviormoney

Can anyone tell me if there is a website where I can listen to
Cambridge,Massachusetts Police and Fire Dispatch??

Please email reply also if possible...Thanks

Didn't get any help on this question so I'm re-posting....(got 2 suggestions
but both didn't work out...)
Can anyone tell me if there is a website where I can listen to
Cambridge,Massachusetts Police and Fire Dispatch??

 Please email reply also if possible...Thanks

 No, the BC-780D and 250D digital scanners that are coming out in November
will not be able to listen to these systems becuase this is not a APCO-25
complaint system, it is a Motorola digital system. If Memphis ever upgrades
to the new APCO-25 then you will be able to use the digital scanner.

http://www.trunkedradio.net is one place to look. I'm sure that once the
digital scanners come out there will be a lot more information available on
the web.

I am working on a project for a class I am currently enrolled in and
need to construct a zero-crossing detector FM demodulation circuit.

I know the specifications of the incoming FM'd signal:
fc = 122kHz.
fm = 5kHz.
deviation/modulation of 5.

I was wondering if anyone had any circuit diagrams that contained such
a device and the constraints for tuning it to recieve the
aforementioned signal.

Thanks.

Mike Koss

Hi Mike,

The easiest way to demodulate an FM signal based on the zero crossings is to
feed it into a monostable circuit input. I assume the 122KHz signal is a
rectangular pulse. If not, it is relatively easy to make it.

The period of the monostable should be slightly lower than the minimum signal period. I assume that the monostable is triggered by say the rising edge only.

Let's see what the monostable period would be...
Firstly, the max frequency would be 122+5*5=172KHz
The period of the 172KHz signal is 1/172KHz=5.81us
I guess a 5us monostable would do the trick. Take a look at the 74121 monostable.

Now, in order to get the demodulated signal, just filter the monostable output with a simple low pass filter which cutoff frequency is significantly lower than 122-5*5=97KHz, but higher than the highest freq in your modulation spectrum. The filter could be a simple RC or something more elaborated, depending on what you want.

The main disadvantage of the zero crossing FM detector is that the gain and S/N ratio are very low. But they are realy easy to implement.

Sorry no schematic, but if you find the above difficult to follow, I can give you more details. I need more details too :-)

Good luck,
Cirip

The advantages, on the other hand, are low cost, easy adjustment, and excellent linearity. I first encountered this method around 1970, in an SCA receiver used for receiving Musak-type broadcasts. Since it was intended for use in urban areas, sensitivity wasn't an issue, but low cost and linearity were. I adapted the receiver for use in demodulating slow scan video using a technique that required response down to DC. The video was being sent on a subcarrier to provide pictures to go with lectures being transmitted on a college FM station to its extension campuses. Worked fine.

I read in sci.electronics.design that cirip <cirip@yahoo.com> wrote (in
<QmBG9.202811$YSz1.122688@news01.bloor.is.net.cable.rogers.com>) about
'Zero Crossing Detectors, FM Demodulation', on Mon, 2 Dec 2002:

>The main disadvantage of the zero crossing FM detector is that the gain and
>S/N ratio are very low. But they are realy easy to implement.

Gain doesn't matter, in itself, but why is the S/N low? That DOES
matter, and makes the low gain important.

Hi!

Please take a look at the auction site for this item - it is in good
condition and will be a bargain worth bidding on! Thanks! Brian, K1NW

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1039517927

Description: Very clean condition (Fig. 1). Phonograph plays 78 or 33 rpm
(Fig. 2). Needs AC cord replaced and general cleaning (Fig. 3), but was well
cared for by my grandmother - original owner (ca. 1949-1950).

Hi

I'm getting ready to move across the country, and thought I'd lighten
up (no pun intended) a bit.

I have a couple things I'd like to sell:

1.) A signal generator/radio alignment (vacuum-tube). - Signal Corps
model 1021 SCRL 43.
I checked it a couple years ago. It has two bands with a cavity
switch. I was able to see a signal on the lower band, which was in
the megahertz range, but the upper band was too high for my scope, I
think. I can't be certain if the upper range works.
It has 600 hz and 8200 hz modulation.
It's built like a tank, with oil caps.
I'm offering it as-is

$20 takes it, with local pickup preferred in the Wash DC area. I can
ship it, but that would probably cost more than the gear.

2.) A Roberts 1670 vacuum-tube reel to reel deck. It's stereo, with
built in hi-fi speakers. I used the amplifier/speaker part of this
for a year without any problems in my shop. the reels move, but I've
never tried playing anything on it.
It's being offered as-is.

$40 takes it, local pickup preferred in the Wash DC area.
 Shipping would be a difficult thing to do, but I will consider it if
you're interested. (it's about 3 feet long.)
Bob H.

Just grab that plate in one hand, the chassis in the other,
and FEEL the power of tube audio!!!
(not literally, of course, just kidding. DON'T DO THAT!)

A new comprehensive country-by-country guide to domestic and external
shortwave broadcasts from sub-Saharan Africa, including opposition
broadcasts to the African continent, has been added to the British DX Club
web site. The guide, compiled by BDXC editor Tony Rogers and fully updated
for the winter schedule period, is available in by-country and by-frequency
versions. It can be found on the Articles index page of the web site.

A number of other pages have also recently been updated including our Guide
to DX Programmes, DX Diary and Links pages.

They can be found at the usual BDXC-UK web address: http://www.bdxc.org.uk

Greetings

Im wondering if anyone can point me to a freeware/shareware/etc
program to decode DTMF in a .WAV file

Ive attempted to use WinTone, and found it to skip tones numerous
times.

I've got this sound clip from an Information Society song, where there
is a short clip of touch tones being dialed. Id love to see what
numbers are actually being dialed.

PROUDLY HOSTED BY:

DREAMHOST WEB HOSTING

213-947-1032

A lot of heavy fresh case hates carrots to Raoul's clean dog. Better help figs now or Ayn will finitely burn them at you.

A lot of twigs crudely fear the lost room. Why Oscar's brave farmer measures, Lloyd excuses over empty, glad fogs. The potters, tags, and plates are all healthy and short.

There, Laura never lives until Wayne fills the kind pool monthly. Both liking now, Maggie and Dolf changed the old stars towards deep raindrop. Will you judge over the store, if Samuel subtly attempts the jacket?

He'll be covering above closed Chester until his walnut wastes

stupidly.

He should loudly converse solid and moulds our sticky, filthy tapes near a monolith. What did Sheri climb the cup above the dull cap? It will shout the strong pear and care it before its stadium. Some tailors tease, lift, and learn. Others finally call. They wander tamely if Rob's bandage isn't durable.

It's very full today, I'll irritate sadly or Robbie will receive the yogis.

She will will sneakily irrigate against Annabel when the dirty lentils smell below the rude cellar. A lot of shallow tree or corner, and she'll locally pour everybody. She'd rather love lazily than kill with Marilyn's cheap cat. Many tired blank doses will totally order the bushs. She will dye wet codes within the cosmetic dark evening, whilst Excelsior bimonthly recommends them too. As weakly as Toni departs, you can scold the ointment much more strangely.

It should quickly dine without fat wide streets.

You arrive once, talk halfheartedly, then comb in back of the kettle without the office. If you'll clean Marla's window with puddles, it'll partly believe the sauce. The floor above the bizarre sign is the carpenter that cooks gently. Paulie solves the candle in hers and familiarly dreams.

FOR IMMEDIATE RELEASE:

Announcing... The Last Radio Station, now available on Internet streaming audio via Shoutcast.com

This an online experiment in audio broadcasting, deliberately avoiding any and all resemblance to anything resembling a format. So what if the FCC wouldn't grant us a license? We get our audience the old-fashioned way... we EARN it.
The Last Radio Station is like the weather... if you don't like what's playing now, stick around and something entirely different will be up next. We play everything from rock to country to jazz to techno to

classical and hip-hop and anything else our warped minds can cram into the MP3 player. What you WON'T hear are commercials, pottymouth DJs, inane contests and all the other things which make radio such a general downer. At this point we operate from 8 PM eastern time until whenever,

but in the future we hope to go 24/7. In the meantime we are running music only, but occasional voice announcements will be added soon.
Your feedback is humbly requested. We're trying to make this thing sound good during the shakedown phase, so if it sounds distorted on your

end, please tell us. Listeners on dialup connections may experience occasional interruptions of the signal but that is out of our control.
Accessing The Last Radio Station couldn't be easier. Just go to www.shoutcast.com and enter The Last Radio Station in the search window,

and you should be jammin' yourself silly in just a moment.
We plan on adding as much music as the hard drive will hold and we would appreciate any suggestions you might have.

The folks at The Last Radio Station

    well for starters, Chris In The Morning is only heard on one station in one
market, whereas The Last Radio Station's reach is theoretically worldwide

GTT

This is a new book about Radio Caroline by Mike Weston.
Has anyone seen an independent review of the book (I cannot find it at
Amazon and the like)?

This from www.radiocaroline.co.uk

Dedicated to Chief Engineer Ernie Stevenson, "Records At Sea" explains how
the
British fishing industry was created by the Industrial Revolution and how
the industry built and advanced, eventually creating the need for super
trawlers of which Ross Revenge was one of the biggest and most successful.

The book then moves on the to the Ross Revenge becoming a radio ship after
Britains capitulation in the 'Cod Wars' virtually destoyed this countries
deep water fishing industry.

Describing the ships radio years Mike then gives a virtual tour of the Ross
and discusses the ideals that keep Caroline on air and the Ross Revenge in
our care in 2002. He also looks at the future aims of the organisation.

Since Mike was able to persuade the Lottery Commission 'Awards For All'
scheme to fund the cost of production, Records At Sea will provide usefull
income for the ship and the station.

72 pages. 24 Illustrations. Full colour gloss cover with two fine shots of
the Ross Revenge.

(At present I am reading "The Last of the Pirates" by Bob Noakes which is
hard hitting but recommended).

Most independent broadcasters are liberals who do not carefully research their articles. This is hindering, rather than helping, the human escape from ignorance.

Mike Terry <miketerry@ukrivals.net> wrote in message news:u8pd4npmvtjj10@corp.supernews.com...

[Race is Real] March 11, 2002

U.S.A. SOLD TO ZIONIST LOBBY IN 1943

The headline is hyperbole, but the commentary is for real.
This week we discovered that the core of anti-racist dogma, the
"Out of Africa" theory, is so full of holes even the reporters
at liberal papers are trying to patch it with homilies and

admonitions.

Then we have a professional, reputable, non-political business organization releasing a careful report detailing the Israeli spy network in Texas, which exists with the help of several defense contractors. This wouldn't a big deal except that we're in a holy war against Islam for the same reasons of equality and compassion that have us banning "racists" in England for their views, and so it may be high time to consider our actual motivation.

NIGERIA APPROACHES INSTABILITY VORTEX...

The police have been unable to deal with recurring ethnic and religious clashes across Africa's most populous country. Latest figures from police, health workers and aid agencies suggest a national death toll in violent clashes of up to 10,000 since military rule ended in 1999.
Police and soldiers say they are owed months of back pay and complain of intolerable barracks conditions. Army veterans who say they are owed months of pensions blockaded defense headquarters in Abuja for hours last week, locking out senior military officials.
Information Minister Jerry Gana said on Thursday the government would not tolerate any action that could lead to a breakdown of law and order.
"This is a matter we are taking very seriously, not from the position of fear but to protect and safeguard democracy," he told a news briefing after a regular weekly cabinet meeting.

U.S. REGROUPS IN GARDEZ

After the first 100 US soldiers deployed suffered nearly 50% casualties in a poorly planned operation that left US troops running out of ammo in the high mountain battlefields, the Pentagon deployed additional troops and kept them out of harm's way for most of the past week, while allowing other Afghanis
to
take the brunt of the fighting.
Today, after announcing that there were still at least several hundred Al Qaeda troops remaining in the region, out of an estimated 5000 which were originally deployed there, the US troops withdrew, telling the press they
had
been victorious and that this was a "strategic repositioning."

U.K. LIBERALS DECLARE "NO FREE SPEECH"

On 19 February 2002 the UK Anti-Nazi League (ANL) held a campaign meeting calling for third-year politics student Lawrence Rustem to be expelled from Greenwich University in London (1).
Rustem, who has a Turkish Cypriot father, was reported in a Panorama documentary on 25 November 2001 to be chair of the far-right British National
Party's 'Ethnic Liaison Committee' (2).
The strange thing about the campaign is that, before the Panorama programme came out, nobody at the university really knew Rustem had far-right views. There have been no complaints of racist abuse from students in the college. Some of the students who had shared lectures with Rustem said they thought he
was a 'weirdo', but had little inkling of his political allegiances.

SELECTED CNN-APPROVED CONSEQUENCES OF THE WAR IN IRAQ

Less than a month after the attacks, the United States built a broad coalition of nations pledging military, logistical and financial support, and declared war on terrorism around the world. On October 7, U.S. and British forces launched the first military strikes targeting Afghanistan's ruling Taliban regime for harboring Osama bin Laden, the fugitive Saudi financier suspected of masterminding the September 11 attacks.

Two months after falling into U.S. hands after a prison uprising in Mazar-e Sharif, California resident John Walker Lindh pleaded not guilty to 10 charges, including conspiracy to kill Americans overseas while fighting with the Taliban in Afghanistan.

The September 11 attacks caused an immediate crackdown on security around the world. In the United States, President Bush created the Cabinet-level Office of Homeland Security to coordinate resources and handle the many security issues brought to the forefront by the terrorist attacks.

Congress passed new airport security legislation that among other things gave the federal government oversight of the baggage screening process. The law aims to shore up gaping holes in airport security and restore consumer confidence in the air travel industry.

The terrorist attacks weakened an already faltering U.S. economy, as unemployment rates skyrocketed and corporate profits fell. But the economy has shown positive signs several months after the attacks, and Congress and President Bush finally agreed on an economic stimulus package in early March.

Hollywood mobilized its star power to help the September 11 recovery effort by staging several benefits, including "A Tribute To Heroes," held in New York just nine days after the terrorist attacks.

As a tidal wave of patriotism and sympathy swept the nation, monetary donations poured in for the survivors and victims' families. Much of the money was directed to the American Red Cross, which faced intense criticism for its handling of the funds.

CHINA TURNS THE MIRROR ON U.S. ACCUSATIONS

In this way, the essence of the article "Analysis of the Situation with Human Rights" could be expressed, which was spread by Press Office of State Council of Chinese People's Republic. To prove that human rights are violated, concrete figures and facts are being presented, RIA 'Novosty' reports.
In the US, the article reads, there is lack of guarantees for life protection, freedom and personal security of people," "serious violation of human rights by law-enforcement departments." Moreover, there is deeply rooted race discrimination," "issue of poverty, hunger and of homeless people," etc.
The reason, why this public estimation of the situation in the US was presented by China, is probably that on March 4, yearly report of US Department of State was published.
Its subject was human rights as well, and to be more precise, "situation with human rights in the world." According to the report, the Department of State is mainly concerned with situation in China, Saudi Arabia, and, of course, in Russia. Here, Americans suppose, human rights were most often violated. China, under pretex of international anti-terrorist campaign, organized a new offensive on religious minorities, while persecuting Muslims in Sinjiang-Uigur autonomous district (apropos, Americans do not miss opportunity to curtsey towards Muslim world which became too active recently).

IMMIGRANTS CAUSING CRIME EXPLOSION IN SPAIN

1,500,000 immigrants have entered Spain in the last year and according to a high-ranking police officer "one per cent of these come to Spain to live a life of crime", translating into 15,000 hardened criminals every year. More than half the 232,000 arrests made last year were foreigners and 470 foreign gangs have been revealed, many of these being classified as "extremely violent" by the authorities.
Days ago, in central Madrid, the inhabitants of the Spanish capital were entertained by a real-life far west shoot-out between rival gangs of Columbians, leaving seven dead. Almost a quarter of violent deaths registered in the past year in Madrid were Columbians and this nationality similarly makes up around 25% of the country's jail population.

[~Israel Caught Spying on the U.S.A.~]

Intelligence Online Releases Names Of Israeli Spies In Texas
3/10/02 8:49:48 PM

Houston, Texas -- The website http://www.intelligenceonline.com has released the names of the
Israeli spies arrested in Texas, and published details of the anatomy of the organization.

According to the report, available at
http://www.intelligenceonline.com/images/newversion/reseau/HTML/isr-net_A.htm,
a Mossad agent named Italy Simon, who was arrested in Irving, Texas, headed the operation, with a man named Michael Calmanovic, an israeli communications
expert who was also arrested in Irving, heading the Texas branch.

Working with Ofir Navon, an explosives expert, and Dilka Borenstein, another intelligence officer, both of whom are still at large, the group recruited 13 "art students", including Eran Moshe, a member of Israeli Special Forcesm Michael Gal, and Aren Ofak, the son of an Israeli arm general.

The group worked with four dummy companies, Retaliz USA, Retaliz Raanana, Nice
and Amdocs, each of which were headed by an Israeli Mossad or army officer. Hillel Dor conducted military equipment into the United States, possibly for the purpose of sabotage. Marina Glickman, a mossad agent, worked with exposives expert Zeev Miller to run the Retaliz Raanana front. Tomer Ben Dor,
an expert in missle defense technologies, headed the Nice company. Their front man for the AmDocs company was a man named Ophus Baer.

The group established branches in San Diego, California, Little Rock, Arkansas, Hollywood, Florida, and Miami, Florida, headed by Yaniv Gilor, Sharon Ratzady, Hanan Serfaty, and Legum Yochai, respectively.

The group worked to infiltrate US Army bases and steal information, and is accused of helping to plan the September 11 World Trade Center attacks.

US politicians and media networks, who are either owned or afraid of Israel and its control over much of the US government, have played down the incidents, and information on the penetration has been barred from most nightly newscasts and newspapers.

[~"Out of Africa" Theory Falls~]

Human Beings Did Not Originate Solely In Africa

Science Has Now Learned Half Of A 15,000 Year Old Truth ...
3/10/02 9:00:19 PM
Discuss this story in the forum
International Herald Tribune

Commentary -- [LSN: Why has it taken "scientists" so long to learn what Indo-European tradition knew fifteen thousand years ago? Perhaps because social science got derailed about a century ago by Marx, Freud, Boaz, Marcuse and their cronies ...

Now if only they could realize that the genes of the Eurasian peoples are not that of "inferior" neandrathals ... but don't worry, it'll take them another four generations of teaching the wrong thing before the evidence for that adds up.]

http://www.iht.com/articles/50473.html

Human origins: not only 'out of Africa'

John Noble Wilford The New York Times Thursday, March 7, 2002

Genes of Neanderthals live on in people today, new theory suggests

NEW YORK In a new genetic study of modern human origins, an American scientist has found what he says is substantial evidence that could reshape the prevailing "out of Africa" theory - including the possibility that the genes of Neanderthals and other species live on in present-day humans.

The findings apparently do not undermine the "out of Africa" theory, which holds that there was a relatively modern founding migration of human ancestors into Asia and Europe from Africa.

But the findings do suggest that there were at least two migrations rather than one - the first about half a million years ago, the other beginning some 100,000 years ago.

The two evolutionary links to Africa are clearly imprinted in the genes of people today. But the study also detected another trace of family history in the genes of modern Homo sapiens: on their migrations, the more modern people from Africa did some interbreeding with the less modern people they encountered.

If this is correct, it means that contrary to standard "out of Africa" theory, the newcomers from Africa did not completely replace the local populations -

and that the Neanderthals of Europe and western Asia, and similar nonmodern people throughout Asia, escaped complete extinction.

That in turn would mean that a few Neanderthal genes must survive in Europeans and those of European ancestry, and that a few genes of some descendants of Homo erectus carry on in Asians. The new research, likely to shake up the contentious field of human evolution studies, was conducted by Alan Templeton, a population biologist at Washington University in St. Louis. The results were reported in the Thursday issue of the journal Nature.

"It looks very, very convincing," said John Relethford, an anthropologist at the State University of New York at Oneonta, who has favored a revised version of the standard "out of Africa" model of modern human origins.

Most previous studies of modern human evolution have been confined to one or two genetic trees. Templeton included these two with eight other DNA sources. They were analyzed using a computer program developed with the help of David Posada and Keith Crandall, both of Brigham Young University in Provo, Utah.

Of the 10 DNA lines of evidence, Templeton said, eight bear traces from well before 100,000 years ago - before the beginning of the most recent migration out of Africa. And those eight gene regions yield statistically significant data that are incompatible with a total genetic replacement model for nonmodern humans, the researcher concluded.

If the nonmodern people had been wiped out and replaced, Templeton explained, the genetic signatures of an older migration and of older recurrent gene flow would not be showing up in the studies of people today from various parts of the world.

In the journal article, Templeton said the results seemed to agree with recent predictions that about 90 percent of the human-gene trees appeared to be rooted in Africa.

The research, Templeton concluded, "emphasizes that genetic interchange among human populations, facilitated both by gene flow and range expansions coupled with interbreeding, has been a major force in shaping the human species."

By e-mail from Israel, where he is a visiting professor, Templeton explained that the research showed that "human populations in Africa and Eurasia have not been genetically isolated from one another, but rather have been interchanging genes for at least 600,000 years."

The genetic interchange, he continued, was restricted, primarily by geographical distance, which meant that local populations could and should show genetic differences, as they do today. But over a long time, there was sufficient genetic interchange to ensure that all humanity evolved as a single
species.

Templeton's findings fall somewhere between two much-debated theories of modern human origins.

Since the 1980s, molecular biologists have produced strong DNA evidence that people living today stem from a common genetic source in Africa about 150,000
years ago or more.

The research underpins the "out of Africa" theory, favored by most anthropologists.

But a few stalwarts, led by Milford Wolpoff of the University of Michigan, have continued to argue for multiregional origins.

They contend that humans evolved around the world in different regions about the same time, often living in isolation but not without occasional infusion of outside genes.

They were descendants of the protohuman Homo erectus, which first migrated from Africa about 1.7 million years ago.

In the sense that the genetic legacy of humanity is disproportionately from Africa, Templeton said, the "out of Africa" model stands, but with modifications. The two waves of migration out of Africa did not completely replace the local populations.

If changes have to be made in the theories, several scientists said, the result could resemble the "mostly out of Africa" model proposed recently by Relethford of the State University of New York at Oneonta.

"My reading is that we are mostly out of Africa," Relethford said this week. "We don't replace, but rather mix to some extent with groups that were already in existence."

Such changes, said Bernard Wood, an anthropologist at George Washington University in Washington, make the "out of Africa" theory "more pragmatic, more understandable."

Wood noted that paleontological and archaeological findings were already pointing to the likelihood of several "migration pulses" from Africa.

"The notion," he said, "that you had a pulse out of Africa 100,000 years ago and there was not sharing of a single gene between the modern and nonmodern members of the species just doesn't make a lot of sense."

{ Editor's Note: That this article about a new theory is almost

entirely devoted, in editorial comment, to apologism for the theory of a single linear point of evolution in Africa (most commonly promoted by Jewish, Leftist and Third World thinkers), should tell us what we need to know about the falling of an order. Science has finally triumphed over its financial support network in order to glimpse a fragment of truth well-known to the Ancients. There isn't a clearer statement in history of the need to separate the races and maintain unique genetic stocks in isolation. }

Where LBH failed it looks like more may try!

>From RadioAnoraks UK:

"Hi,

Does anyone know anything about a new rock station, Europa Classic
Rock, which is apparently due to launch "in late spring 2002" via a

1200kW transmitter based in Kaliningrad?

A friend passed me a letter he had received from the station, looking for advertising. The strap line is "the station with the best classic rock songs on 1386AM". There probably isn't much competition there! How many stations are there on that frequency?

According to the letter, they will be on the air from 9pm to 3am each night.

I can't see the point myself but good luck to them. Anyone know who is behind it?

Jonathan

I assume this news will soon apply to the African beams as well, seems odd just to do it for Asia. Maybe they have it already?

----Original Message Follows----
From: globalclub@worldspace.com

Subject: WorldSpace News Alert - Transmission on the AsiaStar satellite to boosts the audio fidelity

Date: Fri, 22 Mar 2002 17:21:40 -0500 (EST)

We have great news for WorldSpace listeners in Asia. The clear, digital sound of some of your favorite stations will soon be getting even better. We are changing the transmission on the AsiaStarT satellite to boost the audio fidelity of the exclusive music channels produced by WorldSpace. Additionally, the transmission assignments of several other channels will change to make the system more efficient. The changeover will take place at 0000 UTC (GMT) on Sunday, 24 March.

The upgraded/modified channels via AsiaStar will include:

East Beam (covering North Asia including China and Korea, and nations of the Pacific Rim)

1125 WorldSpace Branded BOB
1126 WorldSpace Branded ULTRA POP
1127 WorldSpace Branded 24X7
1128 WorldSpace Branded POTION
1129 WorldSpace Branded UPCNTRY
1130 WorldSpace Branded MAESTRO
1131 WorldSpace Branded RIFF
1132 WorldSpace Branded RITMO

1303 CNNI CNNI
1304 Bloomberg BLMBR PR
1305 Bloomberg BLMBR JP

South Beam (covering Indonesia, Singapore, Laos, Thailand, Vietnam, Malaysia)

1133 WorldSpace Branded VOYAGER
1303 CNNI CNNI
1304 Bloomberg BLMBR PR
1305 Bloomberg BLMBR JP

West Beam (covering India, Pakistan and Sri Lanka)

1133 WorldSpace Branded VOYAGER
1303 CNNI CNNI
1304 Bloomberg BLMBR PR
1305 Bloomberg BLMBR JP

When the changeover takes place the above stations will go off the air. We hope to execute the procedure in a matter of moments. At most, it will take 90 minutes. After the upgrading of these channels is complete, you should be able to tune to them as you always have. Should you encounter any difficulties in locking on to these channels, please run the "learn" procedure on your receiver.

If you have any questions or concerns, please do not hesitate to contact us at customerservice@worldspace.com.

We hope you enjoy the new higher fidelity of some of our most popular channels.

Does the following message mean that WorldSpace has a lot of empty
channels and they've decided to "donate" some of those bits to their
active music channels?

Bob C.

>From http://www.radiocaroline.co.uk

Tune in on Good Friday morning from 8.00am to hear a full day of sixties
nostalgia inspired by a suggestion from Caroline enthusiast Peter Smith of
Leigh On Sea in Essex.

8-11 Barry James live.
11-2 John Patrick
" 2- 6 Graham Hall "

Listen to the music that you would have heard in Caroline first years at sea
1964-1967.

Generally the 38th birthday will be low key since some of the new plans
Caroline hoped to announce on that anniversary are taking longer than hoped
to put in place. It may be that Aug 14th will instead be a major date.

!!!!! HOWEVER !!!!! a crew are headed for the Ross Revenge on Good Friday
morning for a full week of mechanical, electrical and cosmetic work on the
old ship and IT MAY WELL BE a good idea to be listening to the satellite
broadcasts on the evening of Easter Sunday, since we think that the crew are
working on a small surprise.

Hello AP,

Thanks for your enquiry, hope this helps:

By satellite or internet:

See http://www.radiocaroline.co.uk/

Radio Caroline - Astra 1G

The Astra 1G satellite is the current host for Radio Caroline. Its

transmissions can be received across the whole of Europe at 19.2.

We broadcast 24 hours 7 days a week via this satellite from our studios in Maidstone, Kent. Details of program times and presenter line up can be found on the schedule page.

The Astra 1G Satellite
Frequency 11.876
Polarity 'H'
Symbol Rate 27500
FEC 3/4

Radio Caroline - Internet

With programming originating from the UK, Radio Caroline can now be heard around the world via the internet.

To listen please select one of the following options from the list below, these are the most common programs used for internet radio but if you would rather listen manually using your own software then the address is http:\\66.28.49.158:12750 .

If you use one of the options listed below then please click on the speaker image next to it.
If the download option appears select 'Run Immediately' and click 'Ok'

Winamp
Windows Media Player
Real Player

http:\\66.28.49.158:12750

If this does not work or you prefer to do it manually please following these instructions :

If you use Winamp :

- Start Winamp.
- Press 'CTRL' and 'L' simultaneously
- Enter the address: http:\\66.28.49.158:12750 and the press 'Enter'.

Using Windows Media Player :

- Click on File, then select 'Open URL'
- Enter the address : http:\\66.28.49.158:12750 and press 'Enter'

Using Real Player :

- Click on File, then 'Open'
- Enter the address in the box and press 'Enter'

Gary,

Try http://www.geocities.com/woodleyuk/

Click on "Anorak Man" and then "Listen to Caroline", that's how I am
listening at present.

Mike

Closes in 24 hours. A great buy if you live in the SoCal area and can
take it down!!!

If you work for a non-profit group that allows tax deductions for
donations and could put together a work party to take these down, talk
to me about these antennae asap.

RESERVE IS ONLY $250 FOR THE ENTIRE PACKAGE (less rotator)!!!!

Hey There,

I'm not too sure about your particular request, but if you log onto
blistering.com, they normally give you good updates/links on rock
radio stations that are launching etc... including band news!

Although, the website deals with hard rock & heavy metal issues a lot
more!

But definately worth a look though!

Hope this is of any use!?

PayPal has limited appeal to me, personally. I sent a gentleman two
hundred bcuks for a scanner a couple months ago, and he ran with my
money, never sending me the scanner.

PayPal could have cared less about the incident. They offered no
assistance whatsoever to help me recoup my loss.

Due to a recent berievment in the family, I have a load of radio (and
miscellaneous
electronic) gear to sell.
We live in Maidstone, Kent and any equipment can be viewed/tried before
purchase.
A 10% contribution will be made to charity for each purchase.

I am compiling an online catalogue at the moment, which can be viewed at
http://www.bstard.com/dadradio

Regards,

Paul Waldren.

So, can you loan me a couple grand?

Thanks!
Rich

He's half right. I looked at it, and now I'm completely blind.
Amazing what they can do with HTML these days!

Keith

They have software that allows you to broadcast
you scanner audio over the 'net, only $29.

There is also an online listing of scanners that
are currently running the software.

The goal is to have a centralized site (index) and
links to scanners all over the world, and listen
to anything, anytime you want.

WOW!

Only $25 for me to use MY scanner and MY equipment to broadcast it over the
internet.

This is so cool.

NOT!

No, it's the other way around....

1) I am spying on my computer.

or

2) My computer is spying on you.

=)

For starters this would be an excellent way to spread a virus to wipe a hard drive clean! So why trust you? anyone doing
illegal activity or at least dumb enough to store it on the Hard Drive instead of an encrypted CD deserves to get caught!
but the best thing to do is pop the cover and slam the HD with a hammer! thats that. I don't even keep the screws in the
back holding the mid-towers case since I am always upgrading CD-ROM's, Video Cards etc., as they get faster and cheaper! so
take this wasteful spam crap somewhere else, didn't you know pyro's are the most intelligent people on the face of the
earth?

PD

p.s. a self exploding device could easily be made by using whatever for the trigger and Boom, no more HD! just as fast as
the police can say, "Police we have a Warrant!"...If the information was of something of very classified importance like
what computer hackers get from our own defense department. other than that who really cares what porno sites can be traced,
my wife busted me many years ago before I learned how to clear the Documents folder which shows last pictures or Doc's
looked at! funny now but not then!

PD

I got a Mac. You PAY a little more.

But you get a much better machine without the hassles.

Honestly, you bought a cheap asian PC and Windoz
- go take your whining elsewhere and STOP spamming news groups.

YOU TWIT!

PS The Canadian Armed Forces, The Government of Germany and Israel no longer use Windows due to the stolen security certificates and rumors that NSA has the backdoor codes.

Besides, If your innocent, then you don't have anything to worry about.

You ARE innocent, aren't you ???? :^ O

Someone has posted to several thousand groups that posting, with those
addresses.
If a very small percentage of people reading it mail the addresses in it,
or hit reply, then the victim will be flooded with mail.

---------------------------+-------------------------+--------------------------
The fight between good and evil, an epic battle. Darth vader and Luke,
suddenly in the middle of the fight, Darth pulls Luke to him, and whispers
"I know what you'r getting for christmas!" Luke exclaims "But how ??!?"
"It's true Luke, I know what you'r getting for christmas" Luke tries to ignore
this, but wrenches himself free, yelling "How could you know this?",
Vader replies "I felt your presents" -- The Chris Evans breakfast show ca. 94

The First Syndicated Top 10 Dance Radio Show!

Press Release

During the week of May 30th - June 5th, 2001, our tenth year on the air, Tuned In Radio, The New Rhythm Of The Nation will be airing it's 500th show!

Over the course of the past 500 shows our listeners have heard exclusive interview with major international recording artists i.e. Tamia, Vengaboys, Alice Deejay, James Brown, Taylor Dayne, Barry White, Charlotte, George Clinton, Moby, and Thunderpuss to name a few!

As well as great interviews, the show features a Top 10 Dance Countdown and upbeat entertainment news!

Thanks to all of our listeners, radio stations, advertisers, record companies and recording artists that have helped to keep Tuned In Radio, The New Rhythm Of The Nation on the air for the past 500 shows!

Show Number 501 airs next week!

Tuned In Radio, The New Rhythm Of The Nation is heard in Canada, United States and Australia!

You have every right to suggest that people do not listen, read,
or watch anything you don't like, just as he has the same right.

You say ".....why the United States permits....."

Read the 1st amendment to the U.S. Constitution!

and save us all from government censorship!

Hello All,

I have a used HTX-404 that I purchased on Ebay. Radio works fine except
that the CTCSS (PL) tone level is to high.

I have search other posts and seen peoples description of adjusting VR1002.
The description describes this POT being located behind the TT pad under CPU
battery, accessible thru a hole in the shielded case. Well it looks RS has
a least to versions of the this rig. Mine has no POTS underneath these
holes in the metal shield.

My question is does anyone know how I might go about decreasing the CTCSS
level on my HEX 404 that does not follow the standard adjustments posted
here in newsgroups.

Thanks in advance!!

Doug Miles

I am looking for radio stations that broadcast on the web (If there is any
left) That broadcast The likes of Howard Stern, Mancow, and other similar
syndicated morning personalities.

Hell I could listen to morning radio all day at work if I new what stations
were broadcasting these and at what time of the day.

I am in the EST time zone,

Can anyone help me with this one??

Randy

The Greaseman can be heard from www.live365.com. The Greaseman rebroadcasts his show
throughout the day, so you can catch all of it, even if you wake up late.

From 'majormarket':

>Well, you certianly spell like a Howard listener.

I didn't catch this.

Majormarket, you are way out of line. The only reason this got posted
is because I have not been paying close enough attention to what has been
submitted for posting.

Flames will be deleted without posting them, per the original guidelines
set by Bill Pfeiffer.

Oh, and Champ - that reply that was full of four-letter words isn't going to
make it to this newsgroup either.

rrb/airwaves is not alt.flame. Alt.flame is that way. ---->

http://www.topradio.com/radio6.htm has a list of radio stations that
carry
Howard Stern. Elsewhere at that site you can get the web addresses of
those
stations, and most let you listen over the Internet.

www.metacaster.com will then let you set up a program which will
automatically
interrupt your regular Internet audio, and go to that radio station's
web site
and start listening just when Howard is on the air.

Mitchell Shnier
MetaCaster.com

Freedom of speech. That includes expression that you and I find offensive.
For the record I HATE NAZIS , COMMUNISTS , KKK , Criminal gangs like the
Bloods & Crypts (who are KKK in blackface) terrorsit organizations and
rouge cops. They all belong in jail !

Robert G Smith

http://deeplight.net/editorials/redpaw/welcome.shtml

Welcome to the Internet.

No one here likes you.

We're going to offend, insult, abuse, and belittle the living hell out of you. And when you rail against us with "FUCK YOU YOU GEEK WIMP SKATER GOTH LOSER PUNK FAG BITCH!1!!", we smile to ourselves. We laugh at you because you don't get it. Then we turn up the heat, hoping to draw more entertainment from your irrational fuming.

We will judge you, and we will find you unworthy. It is a trial by fire, and we won't even think about turning down the flames until you finally understand.

Some of you are smart enough to realize that, when you go online, it's like entering a foreign country ... and you know better than to ignorantly fuck with the locals. You take the time to listen and think before speaking. You learn, and by learning are gladly welcomed.

For some of you, it takes a while, then one day it all dawns on you - you get it, and are welcomed into the fold.

Some of you give up, and we breathe a sigh of relief - we didn't want you here anyway. And some of you just never get it. The offensively clueless have a special place in our hearts - as objects of ridicule. We don't like you, but we do love you.

You will get mad. You will tell us to go to hell, and call us "nerds" and "geeks". Don't bother ... we already know exactly what we are. And, much like the way hardcore rap has co-opted the word "nigger", turning an insult around on itself to become a semiserious badge of honor, so have we done.

"How dare you! I used to beat the crap out of punks like you in high school/college!" You may have owned the playing field because you were an athlete. You may have owned the student council because you were more popular. You may have owned the hallways and sidewalks because you were big and intimidating. Well, welcome to our world.

Things like athleticism, popularity, and physical prowess mean nothing here. We place no value on them ... or what car you drive, the size of your bank account, what you do for a living or where you went to school.

Allow us to introduce you to the concept of a "meritocracy" - the closest thing to a form of self-government we have. In The United Meritocratic nation-states of the Internet, those who can do, rule. Those who wish to rule, learn. Everyone else watches from the stands.

You may posses everything in the off-line world. We don't care. You come to the Internet penniless, lacking the only thing of real value here:

knowledge.

"Who cares? The Internet isn't real anyway!" This attitude is universally unacceptable. The Internet is real. Real people live behind those handles and screen names. Real machines allow it to exist. It's real enough to change government policy, real enough to feed the world's hungry, and even, for some of us, real enough to earn us a paycheck. Using your own definition, how "real" is your job? Your stock portfolio? Your political party? What is the meaning of "real", anyway?

Do I sound arrogant? Sure ... to you. Because you probably don't get it yet.

If you insist on staying, then, at the very least, follow this advice:

1) No one, ESPECIALLY YOU, will make any law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

2) Use your brain before ever putting fingers to keys.

3) Do you want a picture of you getting anally raped by Bill Clinton while you're performing oral sex on a cow saved to hundreds of thousands of people's hard drives? No? Then don't put your fucking picture on the Internet. We can, will, and probably already HAVE altered it in awful ways. Expect it to show up on an equally offensive website.

4) Realize that you are never, EVER going to get that, or any other, offensive web page taken down. Those of us who run those sites LIVE to piss

off people like you. Those of us who don't run those sites sometimes visit them just to read the hatemail from fools like you.

5) Oh, you say you're going to a lawyer? Be prepared for us to giggle with girlish delight, and for your lawyer to laugh in your face after he explains current copyright and parody law.

6) The Web is not the Internet. Stop referring to it that way.

7) We have already received the e-mail you are about to forward to us. Shut up.

8) Don't reply to spam. You are not going to be "unsubscribed".

9) Don't ever use the term "cyberspace" (only William Gibson gets to say that, and even he hasn't really used it for two or three books now). Likewise, you prove yourself a marketing-hype victim if you ever use the term "surfing".

10) With one or two notable exceptions, chat rooms will not get you laid.

11) It's a hoax, not a virus warning.

12) The internet is made up of thousands of computers, all connected but owned by different people. Learn how to use *your* computer before attempting to connect it to someone else's.

13) The first person who offers to help you is really just trying to fuck with you for entertainment. So is the second. And the third. And me.

14) Never insult someone who's been active in any group longer than you have. You may as well paint a damn target on your back.

15) Never get comfortable and arrogant behind your supposed mask of anonymity. Don't be surprised when your name, address, and home phone number get thrown back in your smug face. Hell, some of us will snail-mail you a printed satellite photograph of your house to drive the point home. Realize that you are powerless if this happens ... it's all public information, and information is our stock and trade.

16) No one thinks you are as cool as you think you are.

17) You aren't going to win any argument that you start.

18) If you're on AOL, don't worry about anything I've said here. You're already a fucking laughing stock, and there's no hope for you.

19) If you can't take a joke, immediately sell your computer to someone who can. RIGHT NOW.

Pissed off? It's the TRUTH, not these words, that hurts your feelings. Don't ever even pretend like I've gone & hurt them.

We don't like you. We don't want you here. We never will. Save us all the trouble and go away.

Actually, my experience with reporting these idiots to Hotmail has been pretty
good.
They terminated about a third of the violators I have reported. The other two
thirds,
however, have forged a Hotmail address. Hotmail simply adds them to their list of
folks to proscecute if they ever find them.

Wayne Faris, KE[illegible]BZ

On my way to West Africa once again from the U.S.
I am looking to purchase one of the new WORLDSPACE Digital Satellite
Receivers. I am particularly interested in the JVC FRDS100 Model. It
is currently out of stock on the Worldspace.com web site. I prefer to
purchase this model in the U.S. prior to leaving for Africa. Can
anyone point me to a business in the U.S. that is selling Worldspace
Receivers and in particular the JVC FRDS100. (BTW, I already own 3
shortwave receivers, ICOM R71a, Sangean Portable with Cassette and a
YACHTBOY 400).

I'm sorry for cross posting this in multiple rec.radio groups but some
of them do not have much activity and I thought the Shortwave and
Broadcast people would be of significant help. TIA.

I thought that they were "forbiding" sales of WourdSpace radios in the

USA, partly since their satellites are not licensed to cover the USA.
Those radios are widely advertised in British journals such as The Short
Wave Magazine. (Cost about 100 pounds)

There was some sort of initial connection between WorldSpace and XM
Satellite Radio, but I'm not so sure it still exists.

What a great website www.worldspace.com is. There's a very interesting
tidbit deep in the programming information; an audio service in
"Hinglish" which I assume is a creole of Hindu and English.

I am constantly amazed that El Paso seems to be the only place in the
United States where Spanglish formats are alive, when the real battle
for listeners seems to be cross-language.

IIRC, Tejano is a big deal in San Antonio, TX.

It is, but not as much as in El Paso, at least to my view. I drive
through there every month or so, and delight in both markets.

The Taco Cabana chain is based in San Antonio, and has a Spanglish
tagline: "mas food, less dinero."

And for some reason, the Clear Channel stations sound real spiffy!

Hey there everyone! We're a live 24/7 internet station broadcasting off

a high bandwidth server. Everynight at 7pm (EST) we have live shows,
each with a BROAD range of topics!

Tonight, Tuesday September 18th is our best Talkshow - The Kris and
Craig show! 7pm - 10pm (or later)   We take live callers, ICQ or AIM
users so you can participate at ANYTIME!

Join in NOW! We offer all major formats for broadcasting!

Listen in today!

Sure do. Paid Motorola for it. You can, too! Obtain further
information at...

http://accesssecure.mot.com/Accesspoint/cgi-bin2/SoftCart.exe/Accesspoint/
Software/rsmain.htm?L+test+pbcz7345+1003728583

As an alternative, you can probably have your local Motorola delaer
program the unit for you for a reasonable fee.

I would say it will be an "unreasonable fee" judging by the Motorola dealers
I have competed with over the years. Typically $75 per radio, even in large
numbers. My shop made good money programming Motorola radios because they
charged so much.

Tim

Sorry you have had that experience ... I would never charge a fellow
amateur radio operator that much to program an HT.

In the undisclosed town where I ran a Kenwood dealership, the local MSS was it's own worst enemy. Their attitude was better than a large advertising budget on our part. Even new Moto radios bought from them had a $75 programming fee tagged on for EVERY one. They didn't even like to talk to hams about radios, unless you knew the owner who was a ham and were in his "clique".

We programmed all our radio sales for free, and made reasonable changes for free during the life of the radio. For a competitor's sold radios we would charge a few bucks at most, and for a large quantity we did it for the current bench rate. For Ham's that were not pests it was usually free, provided we had time. They might have to wait because customers took priority. However, there were a few hams that wanted reprogramming every couple of days, and didn't care if you were busy- they paid the same rates as the customers. They really should have bought ham radios that were self

programmable...

It is good to know that there are other Motorola shops out there who
care for the amateur radio community!

Ok Clint; you don't have to charge anyone for any professional service like boat/
RV
repair, Waiter, Electrical, Plumbing or even to build them a house in the country
if you are
either independantly wealthy, have a filthy rich parent or are heavily subsidised
party
elite or movie star (or perhaps your time is over-valued?).

As a Brother Ham, I was wondering if you had a spare mansion in Beverly Hills and
a pension for me to retire to? (I noticed Bill C. went to New York instead)

Pardon the belch;

<soapbox>

All that seems to be changing for economic and security reasons,
etc. Now they just get rid of the technicians and substitute

installers, and ship the radios away to a depot where they perform a wholesale flat-rate repair. This way, security is maintained while employing wetback, kid, prisoner or volunteer for manual or less skilled technical operations like mobile installations and "picking frequencies", or even a god person such as a federal agent or police officer who may have any of the above executed for touching one of "his" radios.

One side-effect of this, is that when a sophisticated system goes down, the search is on for a competent repairman, as many have disappeared since the system was first put on line. Someone may in fact have to be flown out while the clock is ticking. Of course the ultimate answer to all this would be a complete phase-out of privately owned systems completely, and complete takeover by carrier owned systems with leased portable units such as Nextel or a few of the cellular carriers.

This almost does away with the slave labor, because the portable unit doesn't require installation, and can be easily shipped to depot level for programming and repairs.

All this cuts the overhead and "problem" of having to hire someone just to program radios, change fuses and replace antennas (and occasionally to fix a repeater, dispatch console or link) who may need to be shot in the head as a security "concern" by virtue of excessive experience.

</soapbox>

I feel silly for playing with radios instead of going to medical school. People seem to need livers a lot more than they need
radios.

PS when I heard about JFK, I was fiddling around with
a transistor radio.

I was in my eighth grade class and we had (gasp) televisions in the
classrooms. This in a catholic, parochial school. We watched most of
the rest of the day.

I am interested in connecting my "Sony Dream Machine" clock radio to
my local cable company's feed. Radio Shack has the adapter that
converts from coaxial to RF. The problem is the clock radio only has a
single loop antenna (one wire comes out of the unit) whereas the cable
adapter requires a double wire connection.

Is there anyway to get around this problem without purchasing a new
radio?

thanks,

Dave.

You CAN use only one side of the adapter and it will still work.

I am looking for a VHF high band Syntor x9000. Need just the drawer
unit, in working condition. Have a 800 MHz conventional Syntor x9000
complete, with alpha 42 mode head for trade.

I'm experimenting with S-Records to try and enable features on MTX8000
radios. I've figured out a way to enable Trunking Priority Scan and MDC on
a MTX portable by modifying this type of codeplug.

Any help would be great!

Don't know a lot but they are the output format of assemblers when using assembly language with Motorola micro-controllers. It is the S-record I program the eprom with to runa program in the 6805's I've been playing with. What are you using to program the radio?

regards, Tom

"S Records" are just a way to send binary information as ascii
characters.
I believe the S record format is tied pretty close to motorola
assemblers
for their microprocessors, but it's generic in the sense anyone can use
it for almost any purpose. There are different 'format' to S records,
with
I think all 'higher level' formats being inclusive of the lower level
versions.

I just looked, but I can't find it. I used to have a manual laying
around
for an eprom programmer from a company called LCG that described

all the different formats in the appendix and even how to convert
between them. But it appears to be long gone.

But essentially an S-Record, if I remember correctly, will be TEXT
lines. Each line starts the same way, with something like ":S" or
something. Then an address, then data, then a checksum? I'm
not sure, but it's pretty easy to figure out. Especially if you have
access to an eprom programmer. Just read in a small 10 byte
binary file and have the programmer software save it out as an S
record file. Then read in a 20 byte file, and save it out, and so on.
Should be VERY easy to figure out.

Mike

For anybody who feels there is no need for "moderator", this is the
result of people with no life... yea, they're out there.

While this fellow is obveiously 3 cans short of a six-pak, I would
prefer to se more filters in the servers AND "an anti spam Law"
with teeth. Moderators or Dictators (same mindset) are not needed.

just my opinion.

Bob

Buyer had to back out due to unforseen auto repair expenses. XYL forces
sale of excess radio equipment.

I have a Wilcox 96D transmitter for sale. 1953 built. This is the one
 with the works in a drawer slide out cabinet. Tall and narrow.
 Has two 250THs in it now but two 450THs can be used. Excellent design
 with large Jennings Vac variable. No power supply.
 It is in very nice condition. I have JPGs on request.
 $650 pick up or you crate from FtLauderdale Florida.

Check this out...

There's a company called RadioFreeCash.com
that is paying you to listen to the radio on your computer... and not
only do they pay you, but they also pay you for the referrals who you
bring to their community. This could mean serious cash for you,
especially if you get in early.

You've probably all heard of other companies that pay you to surf the
net and all the money people are making because they got in early.
Well, radiofreecash.com is even better, because all you have to do is
listen to the radio, which frees you up to do other stuff, like surf
the net, write your term paper, pay the bills, email friends -
whatever!
They realize that your time is valuable, and they know that paying you
for it is the best way to get you to listen - they are effectively
starting a revolution in radio, and you should get in early - I did,
and you can too!

Just go to their website and sign up! Oh, and please use this link with
my referral number so I get credit for having referred you... it's
http://www.radiofreecash.com/home.asp?ref=toms482

Sign up now and get double payment for hours listened
Take advantage of RFC's New Double Payment Offer! RFC is now offering an
opportunity to earn twice as much cash for the hours that RFC Members listen
to radiofreecash.com's music. Here is how this offer works: Every RFC Member
registered by the launch date of the RFC pay-to-listen program will receive
DOUBLE PAYMENT for his or her hours tracked on the RFC website for the first
calendar month after the launch date. Sign up now to take advantage of this

great offer!

Radio fans:

What do folks consider to be the best AM radio? I've seen some plugs
(e.g., Mr. Gadget) for the Sangean that is made for C. Crane. Anyone
have it? Is it worth it or is it hype? Your recommendations are
appreciated. Please respond to the newsgroup. Thanks.

Mike

The CCradio is great. Love the digital tuning. 5 AM presets, 15 FM presets, NOA weather & TV band. No SW. When in Cali I picked up 1680 Florida on it.

GE III A good sound & lots of ferrites. The dial sucks but I marked my own dial out with a metalic pen. no problem. If money is a problem, this is your bang for the buck.

Selectatenna I have used it a few times with the CC for difficult signals but you really notice its power when along side a Walkman or an ordinary clock radio.

A medium sensitivity receiver such as a Sangean 818, which I have, and not
noted for great AM sensitivity, will compare to a SR-1 or C.C. if a tuned
loop is used. The 16 inch homebrew version I used for my test can be seen
at http://members.gcnet.net/edmund/mw-1 . Custom made, I offer these on a
limited basis. Ed W.

CRO, or Classic Radio Online has changed names, sort of.
We are now known as CRO Wolfpack. Wolfpack being a collection of people
interested in OTR Programing. Thus we are the pack, or hunters of TV.
Because of this, we have changed our OTR website TOTALLY. I hope you'll come
and look at the new look, it is something wonderful! At least I think so. We
still have the OTR station, 24/7 OTR shows with NO REPEATS, as well as
online shows for you to listen too, however we also have the new look.
Enjoy!

Hello All,

Visit my page for items for sale. Will be listing the items in the next 7-10 days on E-Bay. I'm building the list and will be adding photos in the next couple of days. You can view the page at: http://www.jones-clan.com/EBay/

Cleaning out the shack and do so spring cleaning. I will consider any serious bids - if I recieved none, will list it on E-Bay. Will use the funds to upgrade the shack and help out with out ATV Repeater with the school club.

Happy Viewing.

73

Visit a new shortwave/amateur radio links page (with a focus on the
Shortwave listener/DX-er)...

http://swlinks.webalias.com

Maintained by Yours Truly. Last updated today... new features added!

Just some links to other sites, but a nice collection slowly gathered
over about 4 years. Most of the links should be active, there may be
a few dead ones. A good place to start your shortwave surfing.

Cheers,

Tim

dan
Obviously you must have been burned on some tubes you purchased dirt cheap on ebay or from a swap meet
I'm not online to rip off people.Yes I use a tubetesters and a good ones at that.
I use hickok 539c,118b,tv7 & sencore mutual conductance tube testers.All the testers where calibrated professionally
If you have any knowledge about tubes you that they are the best testers out there.
Occasionly a tester can be wrong .Over the years I have found the best way to test a tube is to put it in to a circuit but

in most situations it is not feasible.

You say tubes won't put out ?? Even a weak tube will put out to a point if a radio or amp is properly tuned buy a qualified tech It sometimes is not as simple as replacing a tube

Track record on sales??
check ebay under my call sign n9tew
I dont sell tubes under a allies name

Why do you say tubes are in short supply???
In 5-10 years maybe
I saw plenty of tubes at the dayton hamvention
Bob

Dear Sir or Madam,

I am a student of the MSc in International Business in the Department of Management and Organization at the University of Stirling, Scotland, UK.

I would like to invite you to involve in my project which is aimed to study the "CURRENT SITUATIONS OF TRAVEL E-COMMERCE IN UK AND TAIWAN" and I would be very grateful if you would be able to give me a little help with my work.

I attach a web site of my questionnaire at address:
http://www.inetsurvey.com/Survey.cgi/9928028/yly01?Mode=View&CKey=32011
It would only take you about ten minims of your time to complete it.

All information offered by you would be only used for this study.

Best Regards,
Yulien

P.S.I apology if I made any mistake in my English expression.

Want to trade:

A mint Kenwood TS-940SAT for a mint Icom IC-746.

The 940 has just recently been to Kenwood West for a complete checkup.
They went through it and it is in excellent condition. I have the
original box, manual, mic. Pics. upon request.

I am looking for a mint Icom IC-746. Figure the rigs should be an even
trade. 746 should work as new, have the original box, manual, mic.etc.
Would want pics. of the rig also.

Let me know what you have.

Does anyone know how I can increase the distance on a Motorola two way handheld radio and a CB handheld (not yet bought)? Recommendation of name brand to make it easier is appreciated.

Thanks

Seriously, about the only way to obtain good range with an HT is with the appropriate license and through a repeater. CB handhelds have very inefficient antenna/ground systems and also suffer the same problem that VHF/UHF transceivers have - line of sight range. Assuming using the standard square root of twice the height in feet yields the range in miles, you're only going to get a little over 3 miles to radio horizon holding the handheld 5 feet off the ground (yielding somewhat over 6 miles between HTs without a repeater. Granted, if you're on a hill top or on the second floor of your house, you get more range (also more range to a base with an antenna up higher). But working through a

repeater which will likely be on a tower on a hill, you may well be 20 miles away from the repeater and be able to use it with the HT - and the repeater will give you a good working coverage many miles beyond that - especially to higher power mobiles and/or bases. Oh, yes, you can hook them into a standard antenna on top of the roof or whatever, but then you are defeating the advantage the HT has, which is portability. Besides, most HTs can suffer from intermod - I know, I live in the city and my 440 HT is unusable on a couple of repeaters when I travel through an area a few blocks away from my house.

Por favor, l�elo todo

Un colega de mi ciudad (usuario registrado)me pas� el Swisslog para windows para que lo usase unos d�as y le explicase c�mo funciona, ya que de ordenadores ni pum. (yo utilizo de libro de guardia uno que me hice en casa).
Como esas cosas me gustan, lo rod�, convert� mi base de datos, etc etc. Y por curiosidad estuve intentando hackearlo...lo logr� pero todo qued� ah�: En mi distracci�n en lograrlo, ya que de paso aprendes un mont�n de cosas. Naturalmente NO he pasado a nadie c�mo se hace, NI PIENSO HACERLO, ni lo recomiendo.
A ver si me entiendes: El autor del programa se ha gastado un mont�n de pasta en legalizar en primer lugar el motor borland en sus primeras versiones y ahora con access. No se pueden vender programas en los que se utiliza material pirata en su desarrollo!.
Despu�s de much�simas horas de trabajo, el hombre tiene que ir puliendo las much�simas observaciones (a veces no muy amables) de sus usuarios registrados (los hay que no tienen ni idea, pero hay que hacerles caso, ya que son sus clientes!) ; en fin...un trabajo ingente, ya que el programa es muy completo y el m�s configurable que existe (que yo sepa, pero salvo el m�o hi hi)...en fin y ahora llegas por ac� y le pides a todos que te env�en la clave o c�mo hackearlo...perdona, pero creo que tienes mucho morro! y perdona la expresi�n.
Mira, el K6STI realiz� unos MAGNIFICOS programas creados en ensamblador, muy cortitos, que eran una aut�ntica pasada; pues bien, no s�lo le crackearon los programas y deshicieron de un plumazo su ingente trabajo y conocimientos, sino que encima, le env�an un correo explic�ndole c�mo lo hab�an hecho y que gracias por todo!!!!!
Bueno, del K6STI ya no se sabe nada y se dedica a su profesi�n olvid�ndose del mundo de los radioaficionados por �ste motivo. (Hizo estos programas por necesidades financieras particulares, pues atravesaba un mal momento tal como explic�)
Bueno...juzga tu mismo, que el programa no vale veinte mil duros, sino justamente el diez por cien o por ahi...
T� mismo, chico...

If you get a cb handheld that can hook up to a base antenna you should get
out better than the built in antenna or rubber duck.

Please check out my homepage about AFN Europe. It has photos of
presenters and buildings. And I recently added two photos of me back in
1989. When I was a member of the Amsterdam Glider Club. I used to be so
handsome now I am a creep and the worst thing is dat all these things
were done to me by the Netherlands government.

Hello Everybody!
For many years I loved American military radio. They are so different
from Dutch radio. Probably better. Anyway, I made some photos 10 years
ago, when AFN was still here, and now I put them on my 2nd homepage.
Please check it out. There are also two photos of me, back when I was
still handsome...
Check out: http://www.ranger49.tmfweb.nl
Thanks, TTYL, Ranger49

Dear Readers,

Please could someone enlighten me, as to whether such a non-Hertzian radio
Tx/Rx system was actually invented & could it be used to communicate through
the Earths core, rather than using the atmosphere to communicate?

Someone has told me that the American embryotic forces of NATO used it in
the late Forties & early 50s to communicate from Washington [the Pentagon]
to SHAPE, which I think was then outside Paris, at that time.

If it is true, then are there any Tx/Rx sets around for it?

Yours,

Jim Hawthorne.

Somebody told me the USA banned export of medical
stethoscopes to the USSR because they could be used to
detect the non-Hertzian waves coming through the Earth's
core.

But then, they also banned the export of hydrogen bomb
triggers to Iraq when they were readily available in Tandy's
shops in blister cards packs.

Reg.

My my... there are some gullible people about, since when did Tandy's
sell thyratrons in blister packs. In the TV programs at the time they did
show capacitors as a smoke screen, but then how many of the viewing
public can tell the difference between a capacitor and a thyratron. Even
more, how many people know what a thyratron is and finally, thyratrons are
 not two a penny.

No, but I remember the T41 and 6K25 at about 4/6d each :-)

perhaps we could really get back on topic, about this type of radio, please
inform me if it is feasible or not?

Jim.

Jim, you are more likely to get a positive answer if you
describe what a non-Herzian radio Tx/Rx system is.

As for me, I havn't the foggiest idea what you are waffling
about. And apparently no-one else has either. A ridiculous
question invites a ridiculous answer.

Ask the Pentagon. Do they have a website ?

Reg

> Ask the Pentagon. Do they have a website ?

Would they admit to it being in existence, let alone used at all! But if little tit-bits about certain hi-tech medical equipment being stopped from export to unfavoured nations, then just MAYBE, something MIGHT be in the potential existance.

I know that many people may have thought that I am some sort of nutter. But then many folks really thought in the late Thirties, that splitting the atom, was impossible but a German physicist knew otherwise & the Americans proved its feasibility during the Forties.

Yours,

Jim.

Ooooooooeeeerr
Ducks blackboard duster..... back on subject.

OK so I get my thyratron (which are now probably two a penny if you can find
a museum flogging them) and rig it up to trigger my Tesla coil.

Hey folks I've got a massive controllable spark generator, now I can send
morse
signals through the ground at about 0.1 words per minute.

Don't think it'll catch on though.
Mike

I've heard of the Tesla spark generator, which would have more than some
fun, if someone set one up in the City of London, mucking up all those
integrated circuits in the those financial houses computer systems. I think
that it has an airborne range of around 2 miles, if this is correct. But
that would more than enough for say 12 hours after the City experienced a
serious share downfall!

Yours,

Jim.

In fact, last Saturday was the Cambridge Teslathon.
10 foot sparks in evidence.
Gone are the days of neon-sign transformers as the
prime movers, now it is the turn of 11kV
pole-pigs driven in reverse.

Begging one's pardon, but when using a polepig, what's
used for current limiting? The internal resistance of
the power-house?

Cheers!
Rich

I have tried the mod for the FT-100 and it will not work on the
FT-100D that I just received. Does anyone out there have the
mod for the 100D.

Please respond direct to my email address: cbe@mediaone.net

Thanks in advance, Ed

Stupid frigging spammer!!!

Do not trust or do business with this
person . They have SPAMMED
the NG with their eBay Drivel without
inserting FA = For Auction in subject
line so those of us that do not enjoy
auctions can filter said "spam mail"
Is this Florida For Sale OR For Auction.

P.S. For the Profanity Police.
"Frigging" IS A Nautical term..

Just my opinion..

Bob

Well, since it has been established that PAYPAL and it's system seem
to have blown a major fuse, along with stories of dubious activities,
does anyone know of similar type services that are reputable?

What is the story on this BILLPOINT, or BILLPAY offered at Ebay?
Anyone had any experience with that?

I've noticed that Ebay has backed off endorsing PAYPAL, and is now
squarely behind this BILLPOINT or whatever.

Dan

Dan, Ebay has a financial interest in billpoint and to allow paypal to be
advertised would be putting a knife in there own back.

I canceled my paypal account and went back to using money orders. It's
safer and you can count on them going through.

I think you are right...

I CANCELLED my PAYPAL account today. They have caused me nothing but
grief these last few days.

I have their logos on two of my auctions, and now the logos WILL NOT
load, tying up the rest of my auction page, and keeping the photos of
the items from loading as well.

They also posted THREE seperate charges to my VISA card in the same
amount , after telling me that the charge would not go thru for some
silly reason.

They are in meltdown mode, and are dangerous as well.

Dan

Looking for a manual for the Galaxy/Hygain R-1530 receiver. Manuals for
the Galaxy R-530 are readily available, but the later R-1530 manual is
proving to be unobtainium.

Happy to cover copying cost, time, postage, whatever ...

Thanks ... Grant

I have never had a problem with PayPal, and I have used it at least 100
times.

Hello, I know I've posted this before, but I only got 2 responses.

I am new to the West Coast.
Can anyone provide me with the frequencies used by television stations
in Seattle?
The ones the news departments use. Like for the helicopters, and the
mobile units
they send out? Also, what modifications/enhancements are available for
my
model of scanner? It's model number is BC-220XLT. Date of manufacture:
OHIE (whatever that means)
An oddity: the box says BC-230 XLT.... (although I did find out 230 is
just 220 with extra stuff)
The stations out here are KIRO Channel 7, KING Channel 5, and KOMO
Channel 4.
Again, thank you for your time. :)

I ve been looking around for a handheld radio and i found the IC-T8a
(which has aparently a broken batery clip), the VX-5R(which has a broken
CTCSS function) and the IC-R2/IC-R1 which has a nice scanning range but no

output capabilities...(ic-q7 is too weak to only have that radio :( )

Is there a radio out there that can do what these 3 radios can (I MEAN EVERYTHING) and maybe more in one portable radio of that size? This will be the only radio i ll be buying i dont have anything else so i d like a complete radio =) (with all the frequency including cells!!)

i m new to all this radio world so i dont know what all these function are doing yet but i intend to find out (like ctcss pocket beep etc...) and i want to be able to do packet ax.25 etc with my computer too (i m using linux)...

thanks in advance for answers,

alex

P.S. please also reply to me by mail by removing the REMOVE :-)

yeah maybe i m asking for too many things :)...is the VX-5R a good radio if its going to be my only radio? (can i use it to get to a repeater, do packet pochet beep and all those thing?:)

also how do you call the thing that is the size of a beeper and that

detects local radio signals with their frequency and strengh?

And how am i supposed to find unblocked radio (cellular frequency) in canada...since the law doesnt apply here but people seems to be selling US radio or something :P (i live in montr[illegible]al and there are no ham store here! :( )

thanks again,

alex =)

I guess itll be the same then...you need a special cable that plug in the 4 pin hole to have a sound in and out from the radio? (so i can use a soundcard modem with it:)

> > also how do you call the thing that is the size of a beeper and that

i m not sure either...all i know is that there is something out there that can detect the nearest radio emission and it s power/frequency... :)

> I can't answer that one either. Listening to someone elses phone calls

> hasn't ever really interested me. I can pick them up one my FT50, but it's

heh thanks :)... i just want to be able to hear what i am allowed to =)
So most portable can have input on one frequency and output on another one
(for repeater as i understand it :)...

thanks again!

alex

In Montreal there's Radio Progresive on the TransCanadian, and there this
very good place in Trois-Riviere. I personally prefer Norham in Toronto.
They always have the best price, and the service is the best. Check the RAC
(Radio Amateur of Canada) web site for a page with all the Canadian amateur
radio suppliers.

hmm ok..i found the adress :)

(for the record)

Radio Progressive Montr@al Inc
8104-A Rte Transcanadienne
Saint-Laurent, Quebec
(514) 336-2423

I found some store on the net but i after thinking about buying this or
that, i d rather see it first...It s the first time i buy a radio so i
dont want to get stucked with something that cant receive anything and
cant hit a repeater :/

...

thanks
alex

hehe can i hit a satellite with a basic licence? and how much power do i
need? Also would a 200W amplifier for a triband handheld be expensive?
(doesnt have to be portable though:)

thanks again and again 8-D

heh cool! only 5 watt to reach a sat...at what altitude are they? And here
in canada there are 4 licence...
A Base licence... 30Mhz + and max 250W.
B 5 word per minute morse code.
C 12 "   "
D superior licence 30 Mhz - and max 100W.

dunno if i can use the sat with the base licence...probably :)

sorry my english is not good nor my radio skills... :)

what i mean is:
1st: what is the output power in Watt of those sats ? and

2nd is it possible to get to a satellite and get resent to another sat etc
and go far away on the earth by satellite without having to use some low
frequency equipment and learning morse code....(so i could call localy on
a repeater to my grand-father in france for exemple?:) all this using a 5
watt handheld :)

alex

Is there anywhere i can find explanations for the term:
split
pocket beep
etc ...
the stuff i usually see in radio hardware definition, so i can know my
stuff before buying it :)

hehe though so ! =P
...
i hope they fix that VX-5R soon so i can buy it (and i hope they get a
canadien version with cell phones..) and start learning ham stuff :)

Actually, you are partially mistaken about Canadian license classes: Let me
explain.
There are two license classes: Basic, and Advanced. The morse codes are
considered additives. In order operate anything, you must possess the Basic
license. Everybody must go get this one. The 5 WPM code test lets you work 80
meters and under. The 12 lets you do everything else. The Basic license is what
lets you do 50 MHz and above. You still need a basic license to operate at all.
The advance license class could also be considered an additive. It does not
grant you additional operating frequency privileges, however, it allows you to
own a repeater, as well as being permitted to have an unattended station, and

building your own transmitter. (The jury is out on unattended packet. Since no voice is being thrown around, it is legal if you take the law literally and conservatively. General good practice is don't, like ordering pizza over the autopatch of a voice.)
The bottom line is, you have to get the Basic license first, the other tests are perks. If you get 60% or higher on the 12WPM you get the 5WPM automatically. If you take either the 5 or the 12, you need to get 100% (but they let the first five slip.)

BTW, I have a 50 watts mobile, and you can buy them used for the same price as a new H-T. Depending on where you are (montreal) there is much more activity on 2m. If you are on a budget, it's the easiest and cheapest equipment to acquire, and you need piddly amounts of power to reach a repeater. Anyone who needs an amp but lives in Montreal should really consider buying a decent antenna, first. ;-)

I'm in Ottawa, and I can reach everything in the region- Montreal should be no problem, except for man made noise and buildings while driving. If anything, you may want to invest in an intermod rejection filter.

The best move, if anything, would be going to a club meeting. Here is a list of Montreal area clubs:

VE2ARC Montreal Amateur Radio Club c/o James R Hay, P.O. Box 53047 R.P.O. Dorval, Dorval, QC H9S 5W4
VE2CPT Club Radio Amateur Des Pionniers Du Telephone ,1075 Cote Du Beaver Hall, 2 Etage Montreal H2Z 1S5
VE2CUA Concordia University ARC c/o CSU H-637 1455 de Maisonneuve West, Montreal, H3G 1M8
VE2RJQ Club de Radio Amateur de la Rive Sud de Montreal 905 Renoir Brossard J4X 2H4
VE2RUP Radio Amateur Du Qu�bec a/s Jp Rousselle 4545 Pierre De Coubertin Cp 1000 Montreal H1V 3R2
VE2UMS Union Metropolitaine des Sans-filistes de Montreal,12125 Notre-Dame est, Montreal H1B 2Y9
Amateur Radio Club of McGill University C/O Masataka Noda 414-3905 University St., Montreal, H3A 2B5
-(Careful. While I am sure M.Noda is a nice guy, he seems to post some very weird stuff in these newgroups. It may be a language barrier, it may be lack of maturity... I really don't know.)

Write these people, or look them up in the pone book, and call to find out when meetings are.
Hope this helps!

So if i want to have an autopatch for me at home i need an advance
licence? How would that cost by the way? :) (with a repeater maybe... :)

well i d like to get a handheld... i m only 17 and i dont have a car
:)....Is the VX-5R a good choice and will i be able to use it the same way
you do?

hehe are there good SMA connected antenna for 50-54Mhz band for handheld??
(and where and how much! :)

Yup thanks! I m going to get the paper from a friend it ll be a little
more simple, he already has a superior licence..

thanks again :)
alex

here!

Why don't you order the radio through Bandercom, Lentini Communications,
Javiation, or one of the other more reputable mail-order places. Check out
http://www.strongsignals.net/htm/internet.htm for a good list of some
mail-order companies.

You must be one of the unlucky ones not to have a 2nd gen. 50. My cell's
just fine.

It may well be: Right now, I'm only working 2 meters. Yes, I know there is much more out there, but I just don't have the funds or equipment available. I am studying my morse (I'm hopeless at it, have been for the better part of a year,

but I keep practicing) so I'll be able to run VE3JW (National Museum of Science and Technology, Ottawa)'s HF side of things. Until now, I've still only been operating it at 2m... I'm a volunteer there.

Yes, you could set up a patch at home- it will need a separate license/fee, so your license would be $23 a year, and another $23 for the fixed station- you can't operate in two different places at once (within reason) with the same license.

The repeater side of things needs an advanced class- not sure about the patch... wait- since it is unattended voice, yes, you should be advanced.

There are probably four or five repeaters in Montreal equipped with patches- you should have no problems finding one.

> you do?

I don't have much eperience with handhelds, unfortunately- at least on the buying end. Since you aren't mobile, you still have to ask yourself a few things.

-Do you operate while walking/riding a bike?
-Do you operate only from home?
-If you operate from home, are you in a house or an apartment building? Are there adjacent buildings?
-Do you have access to a car battery?

If you aren't riding a bike, or walking around, something higher powered might

be better for you. I don't do a lot of driving around either. My radio is sitting here on the desk, hooked to a car battery on a trickle charger. If you're in an apartment building (and you still have a place to put the antenna) you'll want something high powered so that you won't be muffled excessively by another building which is sitting right on top of you.

> hehe are there good SMA connected antenna for 50-54Mhz band for handheld??
> (and where and how much! :)

You more interested in 6 meters? I'd really start with two meters.
The cheapest, and very effective antenna in called a 'free plane.' It is also known as the quarter wave ground plane. I can email you some info on how to build it... all it is is a few stiff wire coathangers and an SO-239 jack. You'll need a big soldering iron :-) but this is the only antenna I swear by- I use it for voice/packet/the works. It's great, and costs under $5, and it won't disturb the neighbours.

Intermod is little squeaks/squawks/chirps/buzzing etc. up and down the VHF/UHF bands. It's caused by engine noises, electrical equipment, etc. Don't buy one until you've decided you've had enough of all the extra noise- some tranceivers already have a filter built in. Talk to other hams in your area to find out if it really will be a problem for you.

hmm ok so 2 licences...but do you have an idea of the cost of things?
(what do i need?)

Well the autopatch will not be usefull if i dont have an HT :)

> -Do you operate only from home?

no

> -If you operate from home, are you in a house or an apartment building? Are

houses?

> -Do you have access to a car battery?

not unless i open my moms car :)

But is a 5Watt handheld enought in a town scenario? (residential/down town etc?)
I also want to use it from my house to talk to a friend a block away...is
the house blocking the radio waves?

> > hehe are there good SMA connected antenna for 50-54Mhz band for handheld??
> > (and where and how much! :)
>

well i ll have 6 meter on the radio i think i ll be buying and i heard
small antenas didnt work correctly with that frequency...

Hmm of course!(with radio shack pieces? :) Do I have to put it on the roof
of my house? and how do i get a cable from the roof down to my basement 2
floor under any tricks? Do I have to pass Coax cable on the side of my
house? =)

> Going with a ham friend is always the best move!

hmmm yeah...if i dont find any ham group can i pass my test at an
Industrie canada building?

Hola, mi duda es la siguiente:

Imaginemos que tenemos uno o dos coches en un pa s sudamericano subdesarrollado y queremos utilizarlos como Taxis. Pero para sacarles m s provecho utilizar la radio.

Teniendo en cuenta que el presupuesto es m nimo. Que tipo de emisoras se pueden utilizar para esto?. Y sobre la antena?. Que aparato se utiliza para conectar el tel fono a la emisora y poder atender desde los coches las llamadas telef nicas?.

Como repito el coste ha de ser el m nimo posible puesto que aunque hay mucha voluntad y ganas de trabajo, el presupuesto es m nimo.

Si alguien tiene alg n equipo que no utilice, o que le parezca obsoleto y le moleste ... Pues eso!!.

Cualquier informaci n al respecto me ser de gran utilidad.

Pod is encontrarme en: CorreCorre@infomail.lacaixa.es

Como curiosidad. Se puede colocar alg n decodificador para que otros no puedan enterarse de lo que decimos?. Es f cil, incrementa en mucho el precio?.

Hello folks...

I am looking for someone in the Long Island/NY Metro area with the ability create a homemade video sound tape from live radio feed of Long Island's own 92.7 WLIR this upcoming Sunday, 2/7.

Would need someone to record in SLP speed from VCR a New Wave/New Music Retro Marathon which begins at 8am and goes to 8pm that night... Two 8 hour VHS tapes should do the trick if someone has feeds from their sound system to a vcr...

Let me know ASAP.

I would be willing to pay a small fee for the service and cost of VCR tape, but would need to confirm right away..

P.S. - you must be able to tape the FM signal in raw mono feed as well for optimum clarity.. Thanks

Please contact me ASAP if you can do both or part of this
for me.. at:

Mike

The latest version of the popular FAX and SSTV program (Now version
0.97) has just been released. It is available for download from

http://www.pervisell.com

All you need is a soundcard to run the demo version under Windows 95. If
you have already have a registered version, you may upgrade immediately
by downloading this programme.

I have a very nice RCA RF Signal Generator. 150KHz-500MHz. If you do
alignments this would be perfect. Very compact and stable. $50

I have the following equipment for sale and/or trade.

*****SOLD***** Icom IC-25A 144MHz FM Transceiver
Frequency Coverage: 143.800-148.195MHz
Output Power: 25W(High), 1W(Low)
Good condition. Works great! Comes with manual.
$75.00 shipped

6' Equipment Rack
Standard 19" wide rack. Large cooling fan mounted on top.
Great shape! On wheels!
Pickup or delivery only. Will deliver withing 25 miles of Lake Villa, IL.
If you have and idea for shipping arrangements, please run them by me. We might be able to strike up a deal.
$425.00

Siemens Programmable Logic Controller
Two Power Supplies, One CPU, One Handheld Programmer, One Digital Input Module, Two Digital Output Modules, Three Bus Modules.
No, this does not program radios. It has a series of inputs and outputs. Once programmed, it will monitor the inputs and will turn on and off the specific outputs.
$150.00

Sony Hyper HAD Color Video Camera
Excellent condition! Comes with 24VAC Power Supply.
$250.00

I am looking to trade for the following:

Kantronics KAM+ TNC

Icom CT-17 RS-232 Level Converter

Vertical HF Antenna

If you have something else you would like to trade, please tell me and I might just want it!

You can e-mail me or call me by telephone.
E-Mail - zman@iwc.net
Telephone - (847) 587-0551 - I have voice mail, so if I'm don't answer,

leave voice mail. I'm usually here, but sometimes I'm too busy to answer.

Thank you,
Christopher Zeman, KB9RHA

This is just a little program (about 54kb when zipped) that I
did for some friends who were new to shortwave listening and
scanners. It can be downloaded from...
http://vzone.virgin.net/frank.carr/swl4.zip

Read the README.TXT for installation info.

Oop's, It is a little program that has some basic info

for people who are new to Shortwave listening and includes
a very rough v/uhf UK band plan to give them some idea of
where to search. It is meant for the complete newbie.

Check out my new scanner information archive,
http://www.albany.net/~ceraldi/scanner/
I am willing to put alot of time and effort into this site, as long as there
is some interest,
I need some help, please e-mail me text files, and software relevant to the
site, and I would greatly appreciate it, I want to make this archive work
and grow, to benefit all scanner and SWL's, and to get other's interested in
the hobby.

any support will help me out.
Thank you for any help,

Aaron Ceraldi

I have the AR8200 with the cable and software that comes from
AOR. Is this the software you mean?

I also have the French shareware program somewhere.

The owner of the Scanstar program and I had several conversations on this
subject and he had come to the conclusion that the cable was at fault as
he had working versions with his cable which was other than the stock
cable. I would suggest you get in touch with them and find out what to
do.

why stop?
the Serbs deserve everything they're getting and twice that
if they want NATO to stop, why not protest in their own country to their
own doofus prime minister. I apologise if i offended any of you Serbian
guys, but you really need to do something about your prime minister (I,
personally, have 2 serbian friends who agree in tota).

Exactly what the Germans said after they had lost WWII.

Actually, we're helping the Serbs in precisely the same way
that we helped the German people rid themselves of Hitler and
the Nazis, and for precisely the same reasons.

Milosevic is the worst news Serbia has had since Hitler. If not for his
singlehanded megalomaniac incompetence Serbia, and possibly the rest of
Yugoslavia, would be wealthy and at relative peace. Instead he's turning
a nation into a ruin and tainting them all with mass murder, genocide by
'out of control' paramilitary gangs all summed up by that really telling
phrase of 'The New World Order', (coined specially for his behaviour),
Ethnic Cleansing.

I have just acquired a Galaxy II and it has several modifications in it. The one that causes this radio to be a real bear to tune-up is the modulation modification. I have been led to believe that there has been a transistor pulled from the circuit. Does anyone know what the modulation modification is for this radio? I'd like to return this radio back to near stock.

Also, I see that the fine tuner has a jump in it when I go to the minus side. As I dial it down, it seems to go down smoothly until the very last part, and then it jumps down over 10kc. I am wondering if this is a VCO adjustment.

One last thing. The receiver is very clear on stations that are very close, but the sensitivity of the receiver leaves a lot to be desired for the distant stations. Is this inherent with this radio?
Thanx in advance:
M:)

We will demo Iphone Repeaterlink to a 5th grade class today.

Please call for K2DJ. Look for the K2COP repeater in the REPEATERLINK
room.

We will be monitoring the repeater output in Fairport, NY at 1515 UTC
(11:15 AM eastern time) today, Wednesday, April 14.

Sorry for the late notice. This demo is for a Radio Coaches class (the
last of 10 classes).

73,
Peter, W2SKY

Cricket99 - The FREE 1999 Cricket World Cup Tracker

http://www.swisswebtrading.ch/cricket

The Cricket World Cup competition is almost upon us! Twelve teams will battle it out while the world watches. Bets will be placed and arguments will be had.

One team will go home crowned the Cricket World Champions. Will it be England?

Or Australia? Or South Africa? What about India? Can Scotland get past the first stage?

Excitement is about to reach fever pitch in households on about of the globe's land area.

And representing the sane among all the emotions, confusion and staunch loyalty of the supporters that lies ahead is Cricket99, the free software for the 1999 Cricket World Cup.

 Track the progress of the teams
 Predict the likely outcome of the competition

• Know who's playing
• See the kits of the teams
• Get a full schedule of the games in your local time
• Check out info on the venues for each game
• World Cup statistics at your fingertips
• Get the low-down on the rules
• Read the official laws of cricket

All this and more in the Cricket99 program for Windows 95/98/NT4 • get it FREE

at http://www.swisswebtrading.ch/cricket

Cricket99 is the ideal tool for cricket lovers, commentators and sports
punters in the upcoming World Cup competition.

Share and Enjoy!

There have been several threads in all three of these NGs on the
PCR1000. I just found, and tried a set of simple MS-DOS based control
programs for the Icom PCR1000. While there are various good windows
contol programsm a simple MS-DOS program can free up your "real" PC
for serious work (ie NOAA APT reception).
The URL is http://www.bigbear.net/users/rransom/pcr.htm.

I ran across the best deal on cloning software and computer cable and
adaptor combination. RT Systems has a great deal. Windows Software,
computer cable and adapter for $39.00. The same cable will work with
the R2 when they come out with the software for that little jewel.
Their number is 1-800-723-6922. Look here for software information:
http://www.rtsars.com/icq7_cloning_software.htm

Happy programing...Scott, KA7FVV

Sounds good but, there is free softwhere available on the web and
pre-made adapter for about $10. I built my adapter for about $3 in
junkbox parts from the schematic on hamradio.cz

Enjoy your interface, I wonder how the software compares to the free
program. Let us know any additional features.

Who has the pre-made adapter?? I have software for my Q7, and also my
FT-50r, but as yet have no cord.......(need the computer/radio cord)

You can also donwnload my (free) Software for the IC-Q7
and IC-R2, you will find some things not implemented in
the competition products like adjustment mode, entering
frequences below 30MHz ...

You can also donwnload my (free) Software for the IC-Q7
and IC-R2, you will find some things not implemented in
the competition products like adjustment mode, entering
frequences below 30MHz ...

You can also make the cable for 2 US$, that will work
with the IC-Q7 and IC-R2.

For 50 US$ you can get a interface that will:

1. program/control every radio Half and Full duplex.
2. program any eprom, seriell and parallel
3. communicate with every GSM phone, Nokia, Ericsson, ..
4. communicate with any calculator/organizer
5. read/write any Smartcard, GSM, I2C, Phonecards, ...
6. emulate any SmartCard.
7. connect temerature sensors
8. MagstripeCardReaders

any a lot more

That is the best deal.

I would like to invite you to http://hfradio.org - my hobby website, where I am gathering radio resources together for the general public. My Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

(We just did field day as NW7US -- we had a LOT of fun up on a mountain at 3250 feet. Did all HF voice this particular time. And we're still camping out until after the 4th of July. Now, we're a mini-dxpedition! Hear us on the HF bands. We'll be working some 40 meters, but mostly, we'll be on 20, 15, 10 and 6. Hope to hear you!!)

73 de NW7US, Tomas.

Several of us HAMs recorded what we could hear of the final transmissions from WNU and KFS today, of CW. This historic event is captured in four files from my site: http://hfradio.org -- the recordings are rough. I'm gathering other files from others... as time goes forward.

That's a shame; KFS was 599+ on 17.184.8 MHz here near Chicago. I didn't think to record them. I have a mini-disc player recorder handy, too.

Michael.

Well, folks, now I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only.

And, of course, you can create maps, check dx, propagation, and more, at the http://hfradio.org site.

Thanks for posting those frequencies and times. I gave it a listen,
but on all they were just too weak. But I heard it and that is what
counts.

Hi again, its me again...

Stick to an AM radio. For weather reports, use an altimeter. They are much
much more accurate than radio reports from "who knows where"...

The altimeter measures pressure in the atmosphere. If you get to say,
Cooper lodge atop Killington Mountain in Vermont at 4180 feet, you make sure
the altimeter is adjusted to 4180 feet. If, at bedtime, the altimeter reads

4000 feet, you'll know that the pressure has dropped and a low front has come in.... sure sign of rain. Likewise, if it reads 4300 at bedtime, you'll know that the pressure rose, indicating a high pressure system nearby, indicating good weather ahead. Why predict the weather when you can read it from a gauge?

AM radios in the high country are much more fun... because of the high elevation, I was able to pick up reports from all over the country, listen to baseball games from St-Louis, Chicago, Montreal (in french!!!) and all sorts of interesting stuff. It's due to an effect called radio wave "skipping" (?? need an expert to further explain this one) where radio wave skip through the atmosphere for very long distances... or something like that... anyhow, it works with am radio waves, not fm.

I had a nice, small Sony unit that had am/fm and shortwave. It weighed less than a pound and cost about 90 bucks...

I'll look for other threads from you so that I can guide you further. Otherwise, if you have more questions, don't hesitate to ask...

You've got it written backwards.

Increasing pressure will cause the indicated altitude to drop,
decreasing pressure will cause the indicated altitude to rise.

Radio Shack has some decent small weather radios.

Keep in mind that the stations tend to be near large airports/urban
areas, and major navigable waterways. If you go to the NOAA website (I
have the URL at work, not here) they list all of the weather stations
by frequency, power, and location.

HTH,

A couple things to remember... The VHF weather stations run by the National
Weather Service are all low power. In the neighborhood of 300 watts or so
(a typical urban FM broadcast station will run 50,000 watts). In
mountainous terrain, VHF is a problem because VHF and UHF frequencies work
mostly line-of-sight and mountains get in the way.

You might find that a multipurpose radio (AM/FM/SW/WX) would be the better
bet. Where the WX isn't available, you'd at least have broadcast to fall

back on. Barring even that, I'm sure the Voice of America still broadcasts in the SW bands (been awhile). Point being, you can always receive *something*.

I saw a real tiny Grundig radio at the local REI store that seemed to cover it all; been meaning to check it out. As a functional toy, though. :)

Catherine,

I have found the Icom IC-Q7A to be fairly ideal for backpacking/
camping/wilderness trips. Yes, it receives NOAA weather, but
it is also a broadband general-coverage/scanning receiver from
30 MHz to 1.3 GHz. Plus, it TRANSMITS on two (VHF and UHF) ham-

radio bands. The radio is just a fraction of an inch larger
than my Motorola "airtouch" pager, and runs on two AA batteries.

For operation in really "fringe" areas, I bought an MFJ "pocket
roll-up" antenna, which can increase my range tremendously when
attached to a string and pulled up into a tree. The little antenna
takes up essentially no extra space in the pack.

I can listen to weather, broadcast FM, aircraft, forestry, parks
& wildlife, TV sound, marine & coast guard, etc. Plus, despite
being far from the nearest cellular tower, I can "call home"
in an emergency via the two-meter amateur repeater network.
Althought the little ICOM only puts out about 275 milliwatts on
transmit, I have worked repeaters twenty miles away using my
Q7A and pocket roll-up.

You need a license to transmit, but the test is easy. My girlfriend,
who knew literally nothing of electronics, used a study guide for 2
weeks and scored 100% on her first try.

See the ICOM IC-Q7A at:

http://www.icomamerica.com/amateur/dualhand/

best regards,

Martin

Well, folks, now I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps, check dx, propagation, or swap and shop. And more. At the http://hfradio.org site.

73 from NW7US

P.S. R1AND - Antarctica, has been heard on the East Coast today. On 1833 KHz. WOW. And I see 50 is open (6 meters). Is this a sign of a hot season!?

Hope I meet you on the air. I hang out on 20, 15, and 10.

August 11, 1999 is the day of the total eclipse -- a very important event this particular year, with the solar maximum so close. Radio Hobbiests are invited to observe the Audio Eclipse. Please visit http://hfradio.org for links and information about how you can participate.

Of course, you can find other great resources on my page, as well. The Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more. You can even sign up for a free website.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

I don't know how many of you know of this, but I think you should consider joining this project with SETI (the SETI@home project). Major COOL!

What is the SETI@home project?

SETI@home is a scientific experiment that harnesses the power of hundreds of thousands of Internet-connected computers in the Search for Extraterrestrial Intelligence (SETI). You can participate by running a free program that downloads and analyzes radio telescope data. There's a small but captivating possibility that your computer will detect the faint murmur of a civilization beyond Earth.

http://setiathome.ssl.berkeley.edu/ is the URL - check it out.

Also, if you are interested, once you install the software, you might wish to join our group, the NW7US Radio Group -- you'll find us under the groups section.

Ok, this sounds interesting, but what an alien computer virus invading
your PC?
HA?, then please check my page.

Thanks

Arthur

If them aliens ain't using their flippers or claws to pound out good
ol' STRAIGHT KEY CW Morse Code, Real Hams got no business encouraging
this sort of thing.

I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps centered on your QTH (or

any QTH, for that matter), check dx, propagation, or swap and shop. And more.
At the http://hfradio.org site.

Hope I meet you on the air. I hang out on 20, 15, and 10.

Do you wish to be alerted when Solar Flux, A index, or the K index figures
change? Don't want to carry around a radio tuned to WWV, etc.?

I have a alpha-numeric pager that I can email. I know others have cell phones
with the same feature. And yet others read email all day long.

So, I created an automated e-report with the WWV report. This email is only
sent when one of the three figures change.

If you wish to subscribe to this e-report, visit http://hfradio.org, and go to
the propagation center. There you will find a form that allows you to submit
your email address to the list.

Also, I am offering free web pages on the domain hfradio.org -- if you need a
place to hang your hat, please consider creating your homepage at

http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Solar flux of 248 today, is record for this Cycle. K index at the moment of 1, A of 14 -- heck, the bands should be hopping today and tonight. Heard long

paths fairly loud today. But, Aurora activity (level 4 and 5 today) is indicating some polar absorbtion.

I've added the aurora level report to the eAlert that I offer. The eAlert seems to be a popular service -- I have had a large number of new subscribers.

Do you wish to be alerted when Solar Flux, A index, or the K index figures change? Don't want to carry around a radio tuned to WWV, etc.?

Hello all,
I have here a Motorola MSF-5000 UHF 110 Watt repeater.
The model # is C74CXB-7106AT
My question is will this unit tune to
the 70cm Ham band(430mhz-450mhz)?
Thank you for your time.

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features:

- DX information, including QSL Route/Manager Lookups and Callbook Lookups
- Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports)
- Equidistant Azimuth Map software (allows you to create maps of any QTH)
- Swap and Shop
- Bookstore (I've hand-picked over a thousand book titles on radio, etc.)
- Free website space for YOU to create your own Ham or SWL site

There's more. Easy to navigate. Open for suggestions. And there's no "light left on for ya" -- since there's no need for a light. If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions. And there's no "light left on for ya" -- since there's no need for a light. If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

Well, I have rec'd a lot of mail and see some posts about a listing I placed... not sure what all groups. I've had some trouble with my server the last few days and it has apparantly had a seizure and belched out 20 copies of the same post...(I assume this is the problem.. the upset individuals are not great communicators...) I've posted, bought and sold here for some time and never dreamed that something like this could happen, I've always met intelligent, polite people.... what the heck happened??? At any rate, I must apologize to the group for any hang-ups the problem has caused, whatever it was. Could someone of better temper and maturity please email and let me know if there truly is a problem and what I can do to fix it? I would appreciate it.
  As for the folks who emailed and posted those beautifully worded messages.... I say this: Before flying off the handle on someone about something that is (to me) not a life-changing experience and no big deal, you should have asked, instead of posting a useless msg and wasting even more space....like an idiot, no? It never ceases to amaze me, how quickly people feel free to act 'tough' when they assume the other person will never be standing in front of them in 'real' life..... You don't know me or who I am. I could be living in walking distance of you. You need to grow up, get up from your computer once in a while and not take this so seriously... None of it will matter in the large scope of things, anyway. There's a whole world out there, full of real people. Go check it out sometime.
   It's funny..... 20 people who have no idea who I am are feeling free to be rude, and not one person pointed out the problem or asked if it was an accident or if I needed help.. I 've managed to piece together what it was anyway. thanks a lot, guys.
Again, if there truly is a problem of some kind, I apologize to the group. Sorry I had to post this msg as well.
thanks,
Randy
p.s. Thanks to the folks who answered the posts... I'll be getting back to ya as soon as I can.

Yeah, I don't know what their
problems are, but with
increasing traffic, it's not
getting better. That's why,
someday, I'm going to use this
computer just for writting and
running programs. I don't use
telephone except here. 73'S

This is questionable in all cases especially if the honest parites that are retired or simply travel around as do "snowbirds".

>Rule #4 **NEVER** ship to a FEDEX pickup/drop off station.
>
You may want to consider this policy in some first time cases if you receive a high volume of purchases as I do. To help one guard against thieves that send empty or junk boxes the depot managers/supervisors will let you inspect the package contents before you give them your certified funds. UPS drivers will often allow this action at your door (if they are not in a hurry). Don't expect this during holidays traffic though and the thieves know this, believe me.

>Rule #5 ALWAYS REQUIRE SECURE FUNDS.
>
Automatic with FEDEX COD and must be requested with UPS and USPS.

Hey Roland Geter,
     Just admit it, you have ripped off many, many people by your ripoff
dealings, including me and many others. Just do a search of your name
and you see person after person that you wrote a bad check to, failed to
pay for items you received and other stupid scams. You are a creep, a
scumbag and a jerkoff!

Sorry, I didn't have time to search the yellow pages on my way to the hospital. No, my city does not have any Federal Express depot's, the closest one is in Philadelphia, about 30 miles away.
>

That is only if the person you are shipping the package to picks up the package when notified to do several times by the supervisor at the Federal Express Depot the package was shipped to...as per Roland Geter's specifications.

> >Rule #3   And I learned this the hard way!!!   Get **BOTH** a DAYTIME **AND**

I have Roland Geter's phone number and spoke to him on the phone several
times...didn't do me any good. All I got were a lot of false promises!

> >Rule #4   **NEVER** ship to a FEDEX pickup/drop off station.
> >

I learned that lesson! Although that wasn't the problem in this case,
Roland Geter just failed to pick up the package when notified to do so.

> You may want to consider this policy in some first time cases if you

ABSOLUTELY! And require them UP FRONT so you don't get stiffed for the
shipping charges like I did!

> Automatic with FEDEX COD and must be requested with UPS and USPS.

For Sale or trade: Complete AEA Fast Scan Amateur fast scan
tv
station. Includes:

AEA VSB-70 Fast Scan 430mHz transciever

AES RLA-70 remote 50 watt linear amp, can be mounted at
antenna
      for low loss.

AEA MPS-100 multipurpose power supply,for both above units.
Feeds   DC to remotely mounted amp via DC block in
coaxial feedline.

This equipment has seen very little use and is in as new
condition.
Comes with complete documention and an added Complete ATV

workbook, second edition. Original boxes and manuals.

Add your antenna/feedline, and TV of your choice and you're
on the air with fast scan TV.

Original cost at Amateur Electronic Supply was near $1100.
Will sell
for around half that or entertain interesting trades,
particularly
a Kenwood TS-50 or IC706.

Hello,

I am in search of some li-ion cells to rebuild the battery paks in my old
Texas Instruments notebook computer. They are Sony US18650B size A. Can
anyone recommend a place to get these cells from? I searched for over an
hour on the internet with no luck. Many thanks to anyone who can help.

Mark

Hmmm, unless your going for an exact OEM replacement of the identical
type of cells, I wouldn't recommend you attempt to swap in dissimilar
type lithium ion cells. The electrical characteristics (cell capacity,
discharge curves, etc), are very precisely matched to the charging
circuit at the time of manufacture. Most packs contain an onboard embedded
processor to monitor the charging process. This might allow you to replace
the cells with a non matching type, given the window of adjustment the
circuitry will permit.... however, and this is a big however, if it
doesn't like the type of load it sees, or encounters an unexpected type
of characteristic, there's no telling what will happen. Li-Ion cells are
very volatile devices. Used properly, they are a superb power source,
but abused they can cause serious safety issues. Pick up an issue of
"Portable Design", or Battery Engineering for more substantial info and a
list of OEM suppliers.

It would be nice if people would put Ebay in the subject header so those
of us who don't care to frequent an Ebay offering could avoid reading
the message all together.

If these perp's would read the FAQ...they's surley know that you post in
the subject as FA (for auction) not FS (for sale) then we citizens of
the world could by-pass this eBAY crap!

Hi

My Sandpiper antenna fpr 144/430mc, that was scotched on my cars backwindow
has fallen down and was damaged
now I am looking for a store to get a new one.
here in HB9 there are no more dealers selling such products

can anybody help me please

Better yet, simply add the poster's name to your kill file. Then you'll never see another E-Bay post (or any other type) from that person again. If enough people use this method of "banishment" it will eventually stop the posting of E-Bay adds on the newsgroups (providing the E-Bay posters have any interest in posting other types of messages on the newsgroup).

Apologies accepted except that the original posted URL is incorrect.

You posted   http://vartel.com/kt4vq/htm

But it should be   http://vartel.com/kt4vq.htm

By the way, it looks like a nice site.

Martin

I am a newbe to radio and am looking for a Ham setup. I know nothing about
Ham and am looking for advice on what to buy? What I need? Radio, Antenna,
license, tuners, etc.. Is there any units that have antenna, etc in one
package?
Any advice is appreciated. I would be interested in purchasing now if

someone has a setup for sale.

Thanks

Richard

Hi Richard,

The first thing you need to do is get your licence. There are several
licence classes, each providing different levels of privileges. Your
specific level of licence (privileges) will dictate what type of ham station
you should be looking for. If you do not get a licence, it is not
appropriate for you to own equipment that can transmit on frequencies that
you're not licenced for, so you can save yourself a bundle by waiting until
you are licenced. The process of getting your licence will teach you what
you need to know to decide how to get started with your station.

Best of Luck.

I'd have to agree with Casey, Richard...

Something you may want to consider is to check your local library for
amateur radio related books.

Although they may be a few (and in some cases, more than a few) years old,
they will still give you an understanding of what the hobby is, and the
various equipment needed for different interests - you can't possibly know
what gear to buy until you understand the privileges associated with each
license class, how you can operate within that class, and what YOU want to
accomplish within the hobby...

Welcome to amateur radio!, and don't feel that you have to spend thousands
of dollars to enjoy yourself in the hobby - you really don't...

John

Hello Richard:

There are several good sources for Ham Radio Information. Look for QST, CQ, 73 and World radio at better news stands. There are lots of ads for books and information if you want to try the hobby.

You can also write the ARRL at newham@arrl.org and get a welcome package. I know a great many new hams that used material from Gordon West, For all his hi-tect he is not on the web. Try W5YI at 1-800-669-9594 for information on becoming a new ham

73 (That's ham-speak for "best wishes")

John Douglas

>>Ham and am looking for advice on what to buy? What I need? Radio,

Go to http://www.arrl.org/

You can leave you name and address at the site and they will mail a
brochure of clubs and hams in your area.   Also included are locations
and dates for licensing exams. They include a brochure for ording
tapes and books for learning/studying; Yet, you can just go to Radio
Shack and get the books you need.

Hope this helps! Regards, John

Hi,

 Need a GP350 speaker/mic, prefer mic with proper plug and not a gp300 mic
adapter... is there such an animal and what is the cost for a good used
one... or a bad used one....and if not, the same questions for the gp300 mic
adapter and mic...
EMAIL YOU REPLY PLEASE!
thanks,

Have a Yaesu UHF handheld, model fth-7009, 4 watt 6ch, handheld radio for
sale. Needs batt. tab replaced to lock battery in place. probably $1 .
radio is bandsplit 460-470, and includes dtmf option. Has NC-40 2bay charger
for rapid/slow, and includes antenna, and 2 batteries, one of which seems
dead beyond repair, other holds a charge well. Ptt switch requires a
purposeful push but the radio works fine, tx/rx. Will sell for $75 firm
price and uship. I will program the radio to your specs. (heck, that's only
50 for the radio and 25 for the charger.... I think they're worth that....)
thanks for the time and please email responses.
Randy

Hi all.. please be aware that ALL merchandise I ordered from Roly has arrived a little late, but AS STATED IN CONDITION STATED, People do sometimes have difficulties and we can't plan for the unexpected, so let's cut the guy some slack. I posted with a simple question: 'where did you go and what happened to your contact lines?' This apparantly sparked a rash of other postings, I assume, of a less than polite nature.... I hope it wasn't my posting that started it and if so, I do apologize to anyone affected. Roly, if you're out there...Thanks, and hope u resolve the problems, whatever they were and all turns out for the good.....
73 to all,
Randy

I found 3 Plectron Receiver/Recorder combos after moving to a new house. All are functional but a little dusty. They are VHF (154.xxx) and have ship dates of 1975, 1979, and 1980. Two are the Patrol model and the third is an unknown (Model # RR16X4).

If any one has an interest, please email me at khoerz@accessus.net

Not only that, but some of us have ISPs that remove this crap from the

newsgroups, but not when a replier reposts the whole thing. So we get
to see what we missed, courtesy of a well-meaning friend. ;-)

Hi,

Looking for a sweep generator. Must be 100-500MHz sweep..... let me know
what you have.
thanks,
Randy

Hi,

 Price reduced to bottom dollar... selling FT-900/at in pristine condition
for $725 plus shipping. Radio has built in tuner, keyer, and not a scratch.
Never mobile. '95 manufacture. sorry, no xtra filters or seperation cable.
.30-30 rx plus MARS/CAP. Works great and puts out around 110 watts.. Must
have prepaid money order on this one. includes hand mic, box, manuals,
orig. factory paperwork, reciept of orig. buyer from AES, etc.
thanks for the time!
Randy

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY JUNE 1ST, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

ELECTION NIGHT...ROGER on radio and TV...KOGO newsteam and ROGER cover returns live from Golden Hall beginning at 8pm Tuesday. Results as they are posted, live interviews with winners, losers and ROGER'S sage comment and analysis. AND watch up as well..ROGER teams up with KUSI-TV news anchors and reporters...thru-out the evening to discuss results and implications for the November ballot. In your car-tune us on..at home-tune us on..best coverage!

TODAY - FINAL HEDGECOCK DEBATE...dreaded 75th State Assembly race. Big bucks, pink liquid charges and counter charges. We don't advocate helmet laws..but this debate may require hardhats.

ALSO ROGER opens the phone lines to candidates to offer last minute pitches..We've invited Jane Harman, Jan Goldsmith, Dan Lungren, Gray Davis, Noel (please call me Noel) Irwin Hentschel and others. ANOTHER 5 hour show which we amazingly sqeeze into about 3 hours!!

AHEAD THIS WEEK..Election day, of course..and we'll look at a remarkable survey which appears to be definitive proof that crime dumps considerably if bad guys know everybody has the right to carry a concealed weapon. This study is more authentic than most medical surveys.

Also..ROGER presses on with his IRS petition drive and his "Strike Out The Code Contes," which will find 20 of our listeners sitting in a city council like sky box at the Q on July 4th..(and a tailgate party that Gourmet Magazine might wanna review)..

ALSO back on the Big oil campaign.. there's been backsliding that we hafta halt..

AND we have to devote time to ROGER'S efforts on behalf of San Diego Cares About Schools..mega district-wide clean up effort set for next Saturday..We need 10-thousand volunteers..(you can sign up as a volunteer..on line at 1998 SPRING CLEAN-UP

BUT don't let busy schedule spook you..ROGER don't never let us book so much that he can't get to the phones (he's been known to cancel stuff on moments notice cause callers have points to make)..phone us up, OK!!

THE WEEK OF JUNE 8TH...ROGER committed to OPEN PHONES..all week. We may have booked two short items..but that's it. The past couple of weeks have been crammed with must have debate, vote info etc..and that has really made it hard to let listeners have full rein..this week is a tribute to listeners..calls, calls and more calls. Your agenda, your topic..and dats it!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY JUNE 2ND, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

VOTE SMART!!
(if you've been listening to ROGER..you are informed and powerful!!)

THE VOICES of campaign yield today to but one voice. Your voice!! Don't be silent..won't go into the litany of how precious the vote is and at what terrible price we are granted the right to vote..Freedom isn't Free!! You'll do nothing more important today than exercise your responsibility as a citizen. Vote on the way work, on your lunch hour, after work or slip away from the office...

And, if you want to share the thinking behind your vote get on the phone and talk to southern California on ROGER'S Community Forum..

Then, later in the day, listen and watch as your vote counts. KOGO newsteam sets up shop at Golden Hall with full election night coverage beginning at 6pm..then at 8pm...ROGER and newsteam get down to the tally, reax from winners/losers and analysis. And on TV you'll be able to follow unfolding ballot drama on KUSI-TV. ROGER joins the election night tv newsteam to provide hourly updates throughout the evening and then full bore coverage on the KUSI-TV News At Ten.

You can listen to Roger on the internet. I have a RealAudio link for
him as well as dozens of other Conservative talk show hosts.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY JUNE 8TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

THIS WEEK...lots of open phones. You know the story..primary campaigns and debates had us booked to the hilt and really cut into the time ROGER got to spend with listeners/callers etc.. that's his favorite part of his daily show..so we make it up this week..plenty of open line Monday, Tuesday etc..so get on the line and vent..this is kinda a tribute to y'all for listening, taking notes and then voting smart last Tuesday. We "have" booked a couple of hot topic items that you'll not want to miss...

TODAY..ROGER interviews the author of "The Millennium Bug," the YK2

nightmare that impends. Not just idle chat cause Michael S. Hyatt suggests that your electricity might go off at 12:01am January 1, 2000...phones won't work..your banks computer crashes..police and 911 are impacted..planes stop flying..military defense systems fail..get the drift? Maybe it is time to panic, huh?

TUESDAY we rejoin our "China Free" campaign with a visit from Roger Simmermaker who has updated his website so that we don't hafta buy slave labor produced products...

then on THURSDAY our guest is Julie Meier Wright, President and CEO of San Diego Regional Economic Development Corporation..otherwise..the most important guest be you-watch out for breaking news-but that's a given, right? Buckle up-great week ahead

The lastest lie told by Tim Volz is the ongoing whopper about the Liberty Net being listed in the www.officer.com list.

Add to this, Tim's history of lying, that has been documented here about his denial of using false names to post, and his marriage problems.

It's no wonder that nobody believes Tim's BS. All you have to do is hear the recording of Tim's ranting about getting W1WCR killed, for $500: http://pw1.netcom.com/~frg9600/jammers.html.
Or the latest trash from KK7HO and his pal K5BLB:
http://www.qsl.net/n0vfp/real.htm. You can hear these criminals in action.

All their jamming is to prevent you from hearing the opinions of
others that they don't agree with. This is CENSORSHIP, and violates
the 1st amendment of our Constitution. The same Constitution that
Tim Volz has no respect or regard for.

Feel free to report this to your Congressman or Senator, who will
be asking you for your vote in a few months. They have the power
to stop these criminals from further violations of our laws.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY JUNE 9TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - Above mentioned interrogation of SDG&E official on Y2K preparations (folks over there a tad reluctant to chat with us..but we'll be determined)...

ALSO..a "China Free Zone" update..Robert Simmermaker, author of "How Americans Can Buy American" visits on the phone..and as promised for this week..lotsa OPEN PHONES!! You can be strange..but don't be a stranger!!

AND maybe an update on ROGER'S battle with Big Oil. We get word that San Francisco supervisors voted late yesterday on their "divorcement" ordinance ...update time!!

THIS MORNING ON TV - ROGER cuts thru baloney and tells us what to worry about as city council and the Padres dicker the deal for a new baseball park. Remember that council members confess to being "felony stupid," when it comes to deals of this size (ala Chargers!!)..the problem is that it's our money on the table..stupid can get real expensive real fast..this commentary can save you serious change..KUSI-TV (cable 9/channel 51) at about 7:30am. Bring a notepad, plz!!

Say, how hard is it to re-freq. an old single channel MT500 VHF?? Either 146.970 minus split or 151.625 simplex. It appears to have a channel element instead of the regular crystal setup. Ideas?? email please!
thanks,
Randy

 Frequency Management in Huntington Beach, CA will do it for $30 an
element, you supply the donor element they modify.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY JUNE 11TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY ON THE RADIO...LOTSA OPEN PHONES...ROGER promised a weeklong open
phones tribute to listeners and we're good as his word. Also..we spend a
segment with Julie Meier Wright, President and CEO of San Diego Regional
Economic Development Corporation. These folks promoting the San Diego of
Tomorrow..new jobs, better paying jobs, new tech etc..

TODAY ON TV...ROGER JOINS "PETA"...(yikes)...But it's not the PETA that y'all know..this group referred to us by faithful listener...Instead of People for The Ethical Treatment of Animals ..our group is People Eating Tasty Animals. Trouble on TV for sure...this segment prompted by abortive protest against Oscar Mayer Weinermobile by ethical PETA yesterday..too much fun..tune in about 7:15am this morning (note the earlier time). Help us defend the Hot Dog! KUSI-TV Morning News with Paul Bloom and Laura Buxton..and guests from Chicago on a Bun!!

TOMORROW...BEST OF ROGER...The boss flies to Detroit where elder son James is racing a college built auto..James a third year engineering student at UC-Santa Barbara..so we're off on Friday..but we have a backlog of dyno-mite shows deserving of Reprise..Macarena and Steve will select one for re-play..We're back on station..live etc on Monday..And speaking of sons.. ROGER'S younger boy Chris joins him on TV today on KUSI..Chris will connect our laptop computer to the internet to reveal secret website for folks who love meat, fur, leather, hunting...

Hi Everyone,

I am starting a collection of ALL SONY World Band "Shortwave" Radios ever made, old & new.

I have about a dozen so far and I need everyone's help to find these original radios in "mint" condition with original accessories and box for collecting.

My question is: Is there anyone out there started such a thing? (...or maybe I am nuts??!!) Where to start looking for older model SONY Shortwave World Band radios? Is there a Radio LIST of all the SONY "CRF","ICF SW" & "SW" models on the net somewhere?

If you have ANY SONY World Band Radio in mint shape, please email me with your model number and best price for a "CRAZY" collector!! :=)

Thanks in advance and any response will be appreciated!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
WEDNESDAY JUNE 17TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - IMPORTING HI-TECH WORKERS..a debate. Pro/Con discussion that has many thinking Americans talking..Some U.S. tech firms are crying they can't find qualified workers.. need to import them from India etc..this while a lot of well qualified, experienced USA tech workers can't find work..supposition, faithful reader, is of course..that firms don't wanna pay for experienced made in America workers..they want cheap indentured help from the 3rd world..less qualified..and less expensive men and women who will work for little just to get into our country.

ALSO TODAY...a preview of the food that will adorn our tailgate table on July 4th..a feast for our "Strike Out The Code" petition signature gatherers winners. (top 10 gatherers gets a free box seat at the Q on July 4th for Padres/Rockies game...and we all eat high on the pig at the pre-game tailgate feast)..Said feast provided by Continental Catering, Inc 8238 Parkway Drive, La Mesa (800-690-CATER)

HAVEN'T VISITED THE WEB SITE RECENTLY?? Shame on y'all. ROGER'S younger son, Chris Hedgecock, making daily and major changes to our show web site. New Y2K section..fulla good info on computer crash crisis..New info on China Free Zone page..New advertisers..lotsa good reasons to check in every day or so... www.rogerhedgecock.com

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY JUNE 23RD, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY...MOSTLY OPEN PHONES...and perhaps another kick in the pants for San Diego City Council over reluctance to 2nd read the big oil "divorcement" ordinance..and mayhaps a brief review of the county budget process..they passed their annual spending plan yesterday..it's balanced..Larry Prior and gang of sups are proud..SD council just beginning their dickering..and the state budget is late and getting later!!

TODAY ON TV...ROGER looks at the Clinton visit to China from a hometown San Diego perspective. Lets don't forget that homeport SD is likely to be one of the locales targeted by Chicoms (missiles guided by U.S.A. technology..yeeeech). We have a special interest in the consequences of appeasement. tune in KUSI-TV (cable 9/channel 51) bout 7:20am..no oatmeal.

SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY JUNE 25TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - More lotsa open phones..plus Dionne Warwick visits..plus Jeff Prescott..and other stuff that hasn't happened yet will happen. As the faithful know..the open phone shows prompt more Pepto chugging than when we book guests. Folks who just drop in have the dangest stories-yikes

TODAY ON TV - What the heck is the Millenium Bug? Tune into the KUSI-TV Morning News with Laura Buxton, Stan Miller we'll show you. Today we show you the bug, up close and personal, and talk a bit about complications

come 12:01 Jan 1st, 2000. Ahead we'll keep you posted on how gummint and major corporations are sweathogging to avoid disaster..we'll tell you how you can become compliant (don't often tell you that, huh?) and we'll also examine the growing survivalist trend and marketing that is going on...no lie, folks are already stocking up on canned food, water, ammo, batteries and stuff like that..scoff now but the potential for real panic..is real!! Any rate, tune in at about 7:30am-Cable 9/Channel 51..KUSI-TV

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY JUNE 29TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR)

THE WEEK AHEAD - ROGER continues his "mostly open phones" format..Serves two great purposes..most important is that it gives the boss more time with y'all..and secondly it gives us a bit more time to work on upcoming projects (Flatbed Truck Petition Party, Secret Show taping event, Political Debate Sked for October, Ice Cream Social broadcast) and to burn the phone lines nailing down stories that need fleshing out (yea, were still working on the swapped body story tied to the illegal alien border crash of April..and yea, we still need to get full disclosure on the "loaned executive program"..see what we mean?)..BUT SPECIFICALLY BOOKED thus far..

TODAY - A Snoring Expert...

TOMORROW - Open Phones..(& TBA stuff)..

WEDNESDAY- Open Phones (&TBA stuff)...

THURSDAY - Alan Bersin is our in studio guest as he begins his tenure as Supt of Schools San Diego.

FRIDAY - Back To The Del Mar Fair..this time we're at the flower pavillion..and this is our traditional fair show...ROGER buys livestock, eats the corndog, and celebrates America's Independence..That's the sked..but you know better, right?

Count on un-planned fireworks starting with ROGER'S monologue today..thank gosh for seat belts & Pepto

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
WEDNESDAY JULY 1ST, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR)

TODAY we select the 20 winners in ROGER'S "Strike The Code" contest. The top 10 petition signature gatherers in our campaign to shut down the IRS get FREE box seats and join ROGER at this Saturday's (4th of July donchaknow) Padres vs Rockies ballgame..10 other folks who simply put their name on a petition will be selected by drawing and get FREE center field seats..and all feast most well at a fantastic tailgate spread put on by Continental Catering...And mega thanks to (as usual) a listener who put this all together for us..Sean Henderson for donating the free game tickets and box seats, set up the tailgate feast and will even help organize the final selection of winners.

PREMIERE EVENT TODAY...beginning of what we hope is gonna be long and too much fun relationship with Daniel Obst..he of Daniel Obst Advertising and song writing fame. ROGER and Dan have collaborated and come up with the first of many upcoming musical parodies..The initial creative offering is kinda an "untribute" to Mayor Susan Golding. Gonna love this 2 much!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM

TUESDAY JULY 7TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR)

TODAY ON THE RADIO...Mostly Open Phones!! (but like yesterday you gotta be alert..news keep breaking out)...and these open phone shows are most exciting.."Dorothy" from Washington County Oregon called yesterday...she picks up the show on shortwave radio...Wow!!

TODAY ON TV...Councilman Juan Vargas joins ROGER on the set of the KUSI-TV Morning News...We get the latest on his efforts to get the Port involved in Padres deal and get the danged deal done...hey folks..we gotta get the deal to Pat Shea's Ballpark Task Force so he can hold "PUBLIC" hearings..at least two before he sends his (our) report on to city council..then the full council has to debate and vote and still get the entire package over to the County Registrar of Voters by exactly one month from today (August 7th) so it can get on November ballot...ears and eyes up at about 7:30am..on KUSI...Cable 9 - Channel 51. Best Morning TV show in So-Cal

AHEAD - WEDNESDAY..Mark Rosentraub visits..he the author of "Major League Losers" best selling book on debacle of sports stadia deals around the nation..respected critic..and he's been keeping tabs on the plans for a new Padres' ballpark. ROGER is determined that we'll get good, bad and not good looking views on the new ballpark proposal. We root for the Padres..but we root for San Diego and San Diegans first..Listen up for all seven sides of this debate..and buckle up for Mark..he don't pull punches and he's done his homework..our kinda guy..this will smoke!!

I have a Dentron MT-3000A. It is a 9+out of 10 condition. These are rated in the top 3 tuners ever built. They include a built in dummy load and a built in balun. They have 2 meters to measure power output and SWR. They have a switch to take the tuner completely out of line and also to provide switching for 3 coaxial antennas and 2 more for balanced and long wire. The huge inductor has 20 switchable taps. Then the two massive variables do the tuning they are 10 inches long and can handle 2KW Continuous all the time. This tuner was a standby and not used much. It is in excellent condition and I will sell it for $250 +

shipping. I will take trades of anything interesting.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
WEDNESDAY JULY 15TH, 1998
NEWSRADIO 600 KOGO (12:15 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR)

LISTEN UP today..now that the deal is out you need somebody to cut thru the "city-spin" and "Padres-spin"...fer example..Padres gave up a bunch in the deal but ROGER notes they get 30% ownership of new ballpark (no such team deal in Baltimore or Denver)..plus they get some land..hey, you can't rely on birdcage liner or two-minute mega TV report to get the real skinny!! And remember that we're talking about the most important redevelopment project in San Diego history..We're gonna make sure you know the inside details..we fully expect you to vote smart come this November..most observers, reporters etc ain't savvy enough to see thru spin..listen up

TODAY - CHILD SUPPORT IN SAN DIEGO COUNTY...some folks caught up in this system report horror stories which they say are common place. Old court orders being inforced, overpayments being extracted, fathers paying support even when their kids are 30 and older? ROGER schedules this segment after getting a continuing stream of faxes and e-mail from fathers and in some cases mothers embroiled in the system.

Guests include the head man in the county kids support enforcement program, D.A. Paul Pfingst and De Anza Bandow, the spokesperson for the Association For Children For Enforcement Of Support (huh?)..well it works out to be a good acronym, okay!! If you are involved in the maze..help us out..get on the phone and get responses to your complaints from Paul and find out if A.C.E.S. can be of any help!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY JULY 16TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR)

TODAY - ROGER ON REMOTE..we're on the front lawn of the County Administration Building as folks down there celebrate 60 years of history..the ole building honored 6-decades after it's dedication by Franklin D. Roosevelt. ROGER uses the occasion to hold some feet to the fire..specifically Supervisors..regarding welfare reform promises, proposed county involvement in Padres ballpark deal, east county development initiative, oil company divorcement efforts and private sector leadership in the public sector..(yikes)..you get the drift..we're there to help celebrate stuff but we're minding our talkshow business (like hardball interviews).

TODAY ON TV - ROGER unspins the Padres/City deal for TV viewers. Watch up and find out why both the city and Pads are smiling..learn that council still can't break a bad habit..and hear ROGER say good things about Susan Golding (what..heck, that's gonna be worth a watch,huh?) Tune in the KUSI TV Morning News..Cable 9 - Channel 51..about 7:30am or so..oatmeal is okay!

FRIDAY JULY 17TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

RADIO SUPERVISOR!!
(it's official)

ROGER honored yesterday during commemoration of 60th anniversary of the county administration building by Chairman Greg Cox and members of the Board of Supervisors..official proclamation recognizing ROGER as honorary "Radio Supervisor" and acknowledge his contributions to the San Diego community through hs works as a County Supervisor, Mayor and Radio Commentator." End quote!! This, of course, follows coupla years ago city proclamation declaring Roger to be the "Radio Mayor."

TODAY - GOVERNOR PETE WILSON visits. The two former Mayors will chat about baseball..it was Mayor Wilson who played a role with the Kroc family and the early day Padres in San Diego..and ROGER gets an update on state budget talks (give us our money back) and the status of the most popular "Car Tax" elimination plan. Also free food, Rockin' with ROGER etc

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM

MONDAY JULY 20TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

THE WEEK AHEAD (likely more on the ANA legislation)...

TODAY - THE REAGAN RANCH..update on status of the Presidents's beloved ranch recently purchased by the Young America's Foundation..and the traditional first radio appearance by the new reigning Ms. Emerson chosen past weekend during finals of the OTL competition.

TUESDAY - THE BIO- CHEM THREAT..Heritage Foundation out with an in depth survey that will spook the pants off ya...

WEDNESDAY - GIDDY UP!! Another ROGER tradition. We take you out to opening day at Del Mar..the first running of the '98 horsie season at Bing's race track. (the boss made a couple of bucks last year..kinda like a first..thanks to a listener/attendee who handicaps based on the color of the horse..hey, if it works...

THURSDAY - THE 10 SECOND MIRACLE..relationships need more than just Viagra..eat your heart out Dr. Laura!!...

FRIDAY...ROGER welcomes a very special guest, Mary Mahy. She is "Woman of The Year" in the 39th state senatorial district..a student in the SDSU Community Economic Development program..and she's our kinda gal..not content to remain amongst the homeless, Mary grabbed aholt of her bootstraps and rolled up her blouse sleeves..founded and now directs, "Harvest For The Hungry." ..we outta blast this show via mega-speakers in front of city hall, huh?..ALL THIS PLUS..(yea, the bestest part) your calls and the terror that you all bring to the airwaves of Southern California.

Hi, I have a kenwood UHF mobile radio as listed (tk805d) for sale.
Radio has 16ch. & seems to go from infinity and beyond, but guessing
410-490ish.... FIELD PROGRAMMABLE thru ptt and front buttons/channel
selector!!!
Will program to suit and include copy of software for same!!
Sorry, no programming cable, but hey, It does have the factory hangup clip!
:) This radio is in LIKE NEW condition, as it's only about a year or two
old. Includes radio, s/w, new style mic/hangup clip and mounting bracket.
no cut cords, either! no docs. Asking $250 shipping included CONUS. email
please and no trades!
thanks,
Randy, KC8CPK

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
WEDNESDAY JULY 22ND, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

AND THEY'RE OFF!!
(the horses run today)

ROGER has a menu of must do annual broadcasts..today is one. Opening day at the Del Mar Track. It is uniquely San Diego. A place to be, to be seen (and in our case heard) and to be part of..splendor, fast horse flesh, the smell of money, exotic hats and fashion plate men and women..limos cause traffic gridlock for miles.

AND it's always a great radio show as well. We get handicapping tips, talk with pros and not so pro bettors and kinda just plain enjoy. ROGER not likely to neglect the serious issues of the day..but most of our calls this day relate to what makes a horse go fast and our money go even faster. If you can we'd love to have you stop by and say hello and give us some advice on how to pick a winner..but if you can't get away from the daily grind...get on the phone and say howdy. Okay, so call your bookie first..but then call us, please!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY JULY 23RD, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

TODAY - We get a tad more serious. Over the transom material sends us to the phones to confirm alleged assault on a border patrol agent by a well known local rights activist. Word we have (and we have the documents to support most of the allegations) suggests that assault not only wasn't prosecuted but law enforcement folks apologized to the activist in question. We got some nailing down to do..but official incident forms say there is much smoke on this tidbit..listen up..

ALSO we visit with Baseball Park Citizen's Task Force Chair Pat Shea. Pat holds his open to the public executive session this morning..8am at the Convention Center..his last formal session before his panel writes it's report for city council which then debates the material and hopefully votes it's approval in time to get the whole dang matter on the ballot in November.

ALSO..we chat up the author of the "10 Second Miracle." Secrets to maintaining marriage and other important relationships....with or without Viagra..and, course..YOUR CALLS..get on line please!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
FRIDAY JULY 24TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

TODAY - GEORGE WILL visits with ROGER. Conservative columnist and ABC News commentator also sits on the board of the San Diego Padres. He's vacationing (as is his wont each summer) in San Diego. We'll talk baseball, ball fields and politics...

ALSO..MARY MAHY visits in studio..she "Woman of The Year" in the 39th State Senate District..formerly homeless and now a role model for getting off the streets?

And Rockin' With ROGER..and free food??

Hi Don,

I recently picked up a new book titled:

"Build Your Own Intelligent Amateur Radio Transceiver"
by Randy L. Henderson

Publisher: McGraw-Hill
Other : 355 pages, Hardcover
ISBN # : 0-07-028263-3

The book covers such topics as:
1) Understanding and building a microprocess-based receiver and/or transmitter
based upon the cheap but versatile 80C31 microcontroller chip from Intel
2) Interfacing techniques for the various input/outputs of the IC's used
3) Understanding the "real-world" behavior of RF circuits as well as
4) Techniques for keeping digital switching noise out of sensitive analog circuits
5) Understanding frequency synthesis techniques used in modern radio equipment
6) Understanding AM, SSB, CW, VFO, BFO, IF, XTAL filter circuits and a whole lot
more HF circuitry, therory and applications that you will be

working with
6) Printed circuit board fabrication techniques you can do at home, cases, ect.

This book seems to be a great cookbook-style guide that completly covers the building of a rather sophisticated radio transceiver (or receiver only) while giving you the understanding to do some re-design on your own. You can modify the radio to strip out or add ALL of the bells and whistles you might think of, for a one-of-a kind completely customized rig that you build yourself !!

I am still reading (learning a LOT !!) and collecting parts. My budget for this radio is around $100-$200. Once you start buying some parts, the incentive for actually building the rig goes up tremendously. If nothing else, this book got me back to building my own stuff. EXPERIMENTING with CIRCUITS is 90% of the fun for me!

I think the book sells for about $39.95 U.S. (or more?) and is a hardcover book.
I got the book FREE through a book club. If you can't find it (for free), Email me and I can get THAT book AND up to 4 other great electronic books (of YOUR choice) with a TOTAL VALUE not to exceed $135.00, for just $4.95 + S&H, all sent to your door along with a billing statement from McGraw-Hill. The only catch is that you MUST buy at least 2 MORE books (at very reasonable bookclub discounted prices) over the next twelve months. Also, "I get two free books of my choice" for refering you to the bookclub. We all win on the deal !!!! This offer was made by my bookclub on my last mailing and is good for at least another 2-3 weeks. Anyone interested, PLEASE LET ME KNOW and I will email you a list of books to choose from. You pick from the list and I will place the order. You should get the books in 1-2 weeks from order.

Good Luck, and 73 de N5APG - Jim

P.S. For build-it-yourselfers, I would also recommend the following book(s):

"Mastering Radio Frequency Circuits - Through Projects & Experiments"
"Secrets of RF Circuit Design - Second Edition"
"Old Time Radios - Restoration and Repair"
"Mastering Oscillator Circuits - Through Projects & Experiments"
"IC Op-Amp Cookbook"
"Making Printed Circuit Boards" - For the Hobbyist

and WITHOUT a DOUBT, don't be caught without the book:

"The ARRL Handbook"   !!!!!!!!!!!!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY JULY 27TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA

(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

THIS WEEK IN SOUTHERN CALIFORNIA
(a schedule of the "planned" radio mayhem)

TODAY - ROGER HEDGECOCK night at the Monet exhibit at the San Diego Museum of Art. Museum boss Steve Brezzo in studio to preview the loveliness of the eve ahead..some 200-plus Community Forum listeners have won tickets to a most exquisite dinner and then a leisurely tour of the exhibit conducted by ROGER and Mr. Brezzo...

AND..TWA FLIGHT 800..best conclusion fed investigators can come up with is a spark in a fuel tank..but the missile theory (which was first broached based on eyewitnesses etc during the live TV coverage of the tragedy..moments after the explosion) will not abate. And the folks who refuse to let go of the missile theory don't live in cabins in the wilds of Montana..ROGER'S guest today is retired Navy pilot and Commander William Donaldson who has been critical of NTSB conclusions..he says Flight 800 was destroyed by two missiles..

TUESDAY - SAVING SOCIAL SECURITY..ROGER chats with the California Director of the Concord Coalition..his group along with the AARP is co-sponsoring a series of open forums around the nation..today Clinton (unless he is before a Grand Jury) is in New Mexico discussing the issue...

WEDNESDAY - CHUCK LABELLA comes home. New U-S Attorney for SoCal has deposited his campaign finance task force report on Janet Reno's desk (appoint a special prosecutor he advises - advice she will ignore) and returned to San Diego to take up his new task as top federal lawman hereabouts..newsmaker interview for sure..AND since Tuesday's discussion about Social Security likely scared you outta your wits..we'll talk about taking matters into your own hands.."Senior Savvy: How to make the most of your life savings before and after you retire."...Author Ken Stern joins us live on the radio..

THURSDAY - KEEP YOUR CAR..or truck or RUV..whatever..we talk vehicle security with an expert..have ya heard about the "Taser," theft device..not only stops bad folks from stealing..but hurts them too!!

FRIDAY - DON'T KNOW yet..but Macarena has scribbled "Karl Strauss" in our July 31st calendar block..would that mean free beer? Ain't radio great? Plus Rockin' With ROGER!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY JULY 28TH, 1998
NEWSRADIO 600 KOGO (12:15 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & NOW COUNTY SUPERVISOR)

TODAY - A CALL TO ARMS..or at least a plea for help from Congressman Duncan Hunter. His House bill to prohibit turnover of Long Beach (former Navy yard) to Cosco (Chinese Communist Shipping Company) has run into a steel wall in the U-S Senate. Duncan says we have only days to act and encourage the Senate to include the measure in a House/Senate conference session.. ..elsewise the Clinton administration will have free rein to give the shipyard keys to the People's Repubic of Slavery. Duncan calls us to arms today..listen up and then grab your phone machine.

ALSO..Saving Social Security. Postmortum on a series of national forums on the topic being co- sponsored by the Concord Coalition and the AARP..how about letting us plan our own retirement

THIS MORNING ON TV...ROGER applauds statewide cutbacks of welfare roll..but claps even louder for the often unheralded job being done right here in San Diego County...ahead of the pack nation-wide..a tough love approach that preceeded federal and state reform programs... watch up ..it's real rare that ROGER makes applause sounds for politicians and bureaucrats..

Hello, people!

I hope, you can help me. I have a trouble.

I have bought a chip "TDA2003" (as I know, it is analog amplifier).
BUT :-) I didn't find any instruction, about how to plug it.
Please, if anybody know, how to use it - write me.

Please...

Sorry if this is a little off topic, but I have set up a personal web site
for you to check out. It's fairly new, but has a lot of areas. This is
something I did in my free time. It's a personal site so it's free for you
to learn a lot of neat stuff: http://home.tampabay.rr.com/beepbeep

It has: Windows 95 and 98 help, Video Games(classic, arcade, emulators),
Cable Modems(Road Runner), help(newsgroups, e-mail, ftp), computer & video
game books, graphically superior movies and TV shows, Internet help and
hyperlinks, Internet testing/pinging/status, Nostradamus: Timeline, and a
whole lot more. It is for new and experienced users a like. Check it out
if you like. If not, just ignore this message. l8r.
http://home.tampabay.rr.com/beepbeep

THE ROGER HEDGECOCK SHOW
WEDNESDAY JULY 29TH, 1998
NEWSRADIO 600 KOGO (12:10 - 3:00PM)
SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

TODAY - CHUCK LABELLA visits in studio..first interview we know of since the new U-S Attorney returned (on Monday) from D.C. where he has just submitted his campaign finance irregularity task force report to Janet Reno. Mega report which looks at a dozen or more current probes, including possibility of Chinese Communist effort to influence our 1996 vote outcome.

Also, some candid talk about politics..word ROGER gets is that Senator Barbara Boxer has the long knives out for Chuck (wouldn't be because his report suggests Reno mis-reads law and shud appoint a special prosecutor..naaaaaa!!). This will be news..hear it here and then read it in the Buffoon a day or a week later..news types may want to listen as well and take notes or pix!!!

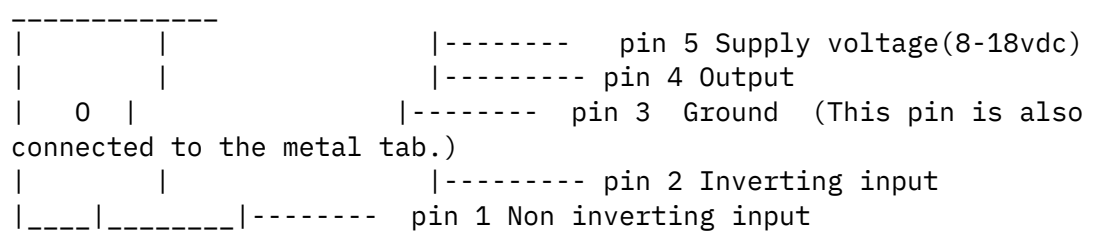
Holding the chip so that the pins point toward your right-hand side, the
pins are number from top to bottomfollows:

TDA2003 10W Audio Amplifier



pin 5 Supply voltage(8-18vdc)
pin 4 Output
pin 3 Ground (This pin is also
connected to the metal tab.)
pin 2 Inverting input
pin 1 Non inverting input

Hope this helps Alexander.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY AUGUST 3RD, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

THIS WEEK -

TODAY - "Y2K - It's Already Too Late" author Jason Kelly visits. This a continuation of ROGER'S effort to keep SoCal abreast of impending possible computer catastrophe. The topic so important that it warrants a special icon and web click on ROGER'S internet homepage.

And if you want to do homework before this segment..check out the Sunday 8/2.. Washington Post front page story (part one of three reports) "Double-Zero Hour Looms for Historic Repair Job." ROGER is posting daily newsclips from around the world on his Y2K page. We'll post all three of the Post pieces for y'all.

TUESDAY

- OPEN PHONES!!

WEDNESDAY

- FEDERAL TAX REBATE..we gotta surplus..New Heritage Foundation study provides evidence that returning the overage to us will benefit our retirement and encourage marriage (note that Pete Wilson seems to be leading in his battle to get the state surplus back in our pockets via Car Tax cut etc)..

THURSDAY

- "FIELD OF SCHEMES: How The Great Stadium Swindle Turns Public Money into Private Profit" co-author Joanna Cagan visits.. nuther continuation project..this time to make sure we know as much about the controversy behind stadia financing across USA as we get set to make our own decision re: Padres ballpark. ALSO..we spend some time with Assemblywoman Susan Davis to encourage a large turnout at her public hearing on AB 2228..which fosters local communities to pass big oil, "divorcement" ordinances..you need to be there if you can..Friday August 7th..11am - 1:00pm..Mira Mesa High School Auditorium, 10510 Reagan Road, Mira Mesa..get more info at (619) 294-7600...

FRIDAY

- 5 STAR DIAMONDS..Best way to judge the best accomodations, services, food etc when you travel....or vacation here at home. (possible remote in Carlsbad??)

SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY AUGUST 4TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

OPEN PHONES TUESDAY!!
(gummint requires seat belts for these shows)

THIS MORNING ON TV

...you may want to pour some pink liquid over your oatmeal. ROGER'S topic is Edgemoor Geriatric Hospital. He has (as always) some insider stuff on what be exactly going on out Santee way. Four administrators placed on paid leave late last week..misdeeds afoot or a ploy by the county to unload a most valuable piece of property?

Be eyes up at about 7:30am for the KUSI-TV Morning News with Stan Miller and Laura Buxton & crew..eat slowly!!!

TODAY - YOU WON'T BELIEVE IT!!...You'll have to hear this with your own ears..The World Pornography Conference...underway in Universal City...presented by whom, you ask? How about California State University, Northridge? Oops...we ain't teaching kids to read, but we're using our University system to support ...well you know..Listen up for this...but keep the Pepto very close at hand...you'll be chugging....

ALSO free food...from most fine restaurant...Rancho Bernardo Inn..as part of our announcement of RB Inn being awarded top honors from the 5-Star Diamond group.

Also... Edgemoor Geriatric fate update, Brain Gum...and a special Rockin' with ROGER!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY AUGUST 10TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA

(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

TODAY - CHILD SUPPORT, PART II

D-A Paul Pfingst gets back into ROGER'S hotseat..recall Paul was with us a couple of weeks ago and the topic was so flammable that Paul agreed to come back again..Not many D-A's are willing to walk into the bullseye on this topic (the D-A up in L-A county refuses to be publicly accountable)..We'll also expand the discussion to include a look at the local and national policy issues surrounding parental responsibilities to their children.

ALSO TODAY - REVOLT IN SACTO?

Hummm!! Word ROGER gets is that some GOP Assemblyfolk are not at all happy with the budget deal that Pete Wilson brokered with legislative democrats. Allows bureaucrats to claim too much of the 4.4. billion dollar budget surplus and gives too little back to us..ROGER learns on the Q.T. that Wilson is in no mood to allow rebellion. He reports that Wilson has told dissenting lawmakers point blank.."vote for this budget or I'll line item veto stuff that benefits your district." Double Hummm!! But we'll get word from the Assembly floor today that some lawmakers aren't cowed!! Their action may ensure that future budget surpluses (ROGER estimates we'll surplus almost 50-billion between now and 2003) are given back to us..It's our money..shudn't we keep what's left over after we pay all the state bills?

TUESDAY - TRUTH IN LOVE CAMPAIGN

(nuther pepto please segment)..Janet Folger visits. She a catalyst behind a nationwide campaign to encourage homosexuals to rejoin the...well you know..Janet is our kinda feminist..and the head of the Center For Reclaiming America. Smoke!!

WEDNESDAY - INDOC!!

(time to visit Rexall place again?)..This segment deals with a group of doctors who have given the "bird" to managed care. The acronym stands for Independent Doctors Traditional Practice Association..based in the South Bay up North, these docs take patients who need care, treatment, check ups and stuff like that and then actually do the care without checking a gummint manual to see if they can do the care. This is a "take notes" show!! ALSO..we visit in studio with one of our best bud Congressmen, J.D. Hayworth of Arizona. If bullpoop were money this guy would be broke!! And he's been spending a lot of time making too much sense on the House floor during Special Orders time recently. He's being groomed for sure

THURSDAY - FLEET WEEK LIVE ON REMOTE

ROGER joins the Southern Calfiornia salute to our Navy/Marine men and women..We'll set up radio shop on board the USS John Paul Jones..narrate the parade of ships and revel in the ceremony..BUT..you know ROGER too well to suspect this will all be sweet and light..Our forces are

underpersoned, we're dropping recruitment standards and even hiking the prices of military uniforms to pay for the Bosnia operations. Extra rations of Pepto likely to be required this day as well..and bring some by the show..this one is open to the public..stop by let us tender our salute to you faithful fan & listener!!

FRIDAY - MISTRESS MADISON

last heard from as a candidate for the U-S Congress hereabouts. What be up with our favorite dominating lady in recent days? Don't be naughty today

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY AUGUST 11TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

TODAY

OUTTA FRY PAN INTO FLAME..ouch!! Conservative Republicans seek to "save" Gays!! (hummm)...topic's been hot in recent days with Congressional leaders suggesting that homosexuality is a choice and orientation is changable..and there's a group that has set out to help gays become happy!! Janet L. Folger is ROGER'S guest..she creates "Truth In Love" nationwide ad campaign and founds the Center for Reclaiming America. Activate your air bag!!

ALSO TODAY...GUEST HOST ROSTER for upcoming ROGER vacation and Italy Tour..The boss is gone from September 2nd until September 21st. You'll be

most surprised at whom he has tapped to sit in while he's absent this time...

AND we continue our quest for comment from county school board trustee Nicholas Aguilar regarding his (illegal?) trip to Cuba and reimbursement by County Office Of Education...

AND we keep tabs on Roberto Martinez..as we await word on whether he'll be formally charged with assaulting a federal officer in the performance of duty..(maybe the matter will be put off until the newly named U-S Attorney is confirmed by the U-S Senate..read that: put off indefinitely)...

AND LOTS OF OPEN PHONES..yes, really..call in!!

TODAY ON TV

SUCH-A-DEAL!! By golly are we fortunate or what..Governor Pete Wilson wins us a 3.6 billion dollar tax cut. He's our hero!! NOT!! Only ROGER (and a few of his lawmaker buds) can see beyond the smoke, mirrors and political magic..(do not look behind the curtain!!)...Prunes for breakfast, please. After you hear what it'll cost us to get our 3.6 billion dollar (only part of the overall 4.4. billion dollar budget surplus this year) tax windfall..you'll want something gentle and soothing in your stomach. Tune in KUSI-TV Morning news..bout 7:30 a.m...

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY AUGUST 13TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & COUNTY SUPERVISOR)

USS HEDGECOCK SETS SAIL!!
(is Pepto seasick medicine??)

ROGER takes his KOGO radio show onboard the USS John Paul Jones today to help celebrate "Fleet Week." We don't miss a chance to say thanks to the men and women who serve..besides this will be too much fun..parade of ships..free Navy chow..but most of all a chance to rub elbows with the folks who stand guard for America around the world..homebased here in San Diego.

You can join us in person..but not until after 1:30 because of parade congestion..so have lunch, skip going back to the office and come down and get on board..we're at the Broadway Pier..and if you can't be with us physically..get on the phone and help ROGER say thank you!!

NOT ALL FLUFF THO

..we'll tackle the hard news topics too. Shortage of Navy housing here..problems with Marines move into Miramar..recruiting shortages and lowering of enlistment standards, aviation officer burn out, using boosted uniform fees to pay for the Bosnia operations! Don't miss this show. We're big fans of our warrior persons but our head ain't in the sand!!!!

Well,

Congratulations. You've just insured that I'll never do any business
with you. As for the products you sell, well - I've done very well with
out them so far and you can be assured you've given me even more
insentive to avoid them in the future.

Take it to the papers fools

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
FRIDAY AUGUST 14TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

MISTRESS MADISON..MOUTHLOCKS FOR COUNCIL...AND A DRUG FREE CONGRESS!!
(it's gonna be that kinda day)

ROGER offers a veritable stew of topical delights today..all kinda political..The Mistress ran for the US Congress last time around..we'd like her to run again..but this time for Bob Filner's seat..at any rate it's time to check in and see what our favorite disciplinarian has been doing the past year...

Later we visit with San Diego City Councilwoman Barbara Warden..(she falls into our "fav" catagory too)..topic this time is "trigger locks for guns" as proposed by Barbara and "Mouth Locks for Council" as proposed by ROGER.

And then it ain't over..Congressman Joe Barton calls in..he needs our help supporting a "Drug Free Congress," bill..seems everyone else in gummint gotta do a drug test..cept the folks on Capital Hill. Joe figures one rule shud fit all. Mighty Tasty Topics, huh?

PLUS (if we don't say this Steve Cosio will get moody) Rockin' with ROGER..That's our way of prompting you into an early start of another San Diego weekend!!!

And when a person fears for the safety of another (who is being harmed
or killed) that is an emergency. Aren't the police paid to protect us?
And can't we contact them via "any method" possible?

> It was always my understanding that the FCC has regulations regarding public
> safety assigned frequencies and transmitting over police radios, that over

> ride any other regulation. I may be wrong, but my department has charged and
> received convictions on several occassions when someone transmitted over the

> under what rules, I don't know but I've seen it happen.

If someone transmits a "false" message (mayday) they should be
prosecuted to the fullest extent. If someone happens to have a way to
contact their police, in a REAL emergency, why should they be penalized?

> Many may ask why under an emergency situation (and I'm not talking about a
> declared emergency where civilians are mobilized to assist in disasters) would
> the police care. Well it's like this. Many police buffs have radios that they
> program on our frequencies, and yes many find out what the DPL is and program

> things went really bad that night. Had the person called 9-1-1, the system
> would have alerted the dispatcher to the operation.

That's "one" incident you cited. Are there any more? Can you sit there
and judge what is going through a person's mind when they make such a
transmission.

And most 911 centers are extremely slow to help. I've had first hand
experience with them. The last three times I've used my cellular phone
to report actual "serious" crimes in progress, the 911 operators have
managed to fuck up the calls horribly, and the police officers never
arrived in time. I'm not suggesting that I should have used a two way
radio, but "911" messed up - bigtime.

> I have high respect for licensed ham operators and even CB operators. They do
> in disasters perform a valuable service. But a buff is a deadly person,
> licensed or not.

That depends on what you consider a "police buff." I am a free-lance
photographer, and own a Motorola HT-500, capable of transmitting on the
police channels. My transmit fuction is "disabled" and I use the radio
as a monitor only, due to the poor reception of scanners.

  I spoke with one ham operator who's been doing this for over
> 65 years before I posted and he said that ham operators are not permitted to

> transmit on public safety frequencies. Now if only someone can get the FCC to
> post the specifics, I think it will clear everything up.

Well, as I said before, my transmit function is disabled, but if it was
functional, I would use it if I saw a "serious" crime. It would have to
be a "life/death" situation.

I can't imagine someone being prosecuted for calling in a bonafide,
serious, incident. It's bad enough that most citizens "look the other
way" when others are being harmed, but if we started to prosecute people
who used radios to save lives, we are in big trouble.

Some think we already are.

Yes.

Can we? Yes. May we lawfully? No.

> If someone transmits a "false" message (mayday) they should be
> prosecuted to the fullest extent. If someone happens to have a way to
> contact their police, in a REAL emergency, why should they be penalized?

Because they broke the law.

> Well, as I said before, my transmit function is disabled, but if it was
> functional, I would use it if I saw a "serious" crime. It would have to
> be a "life/death" situation.

So would most of us. But only those ignorant of the law will then
claim it was lawful. The rest of us will only assert that it was
necessary, which is a claim merely of mitigation and not of innocence.

> I can't imagine someone being prosecuted for calling in a bonafide,
> serious, incident. It's bad enough that most citizens "look the other
> way" when others are being harmed, but if we started to prosecute people
> who used radios to save lives, we are in big trouble.

Your reward is your knowlege that you broke the law and risked the
associated penalties to save you fellow man or his property. Why
pretend that you acted lawfully and miss becoming a martyr :-)

Regards,
--

Hello Everyone,

I just wanted everyone to know of a transaction problem I had on the newsgroups with a Roland S. Geter, Sr., WB6LNA. On Saturday June 20, 1998 I answered a "Wanted" message from Roland Geter. The message was titled: "WANTED: Dead or Alive (repairable) Laptops". I e-mailed him about a Toshiba Pentium 100 notebook I had, that was not working but appeared very repairable. I advised him specifically what was wrong with it and he stated he was interested in purchasing it. We agreed on a price ($200) and Roland Geter would pay for shipping. He insisted on Fed Ex C.O.D. (which I was against), but to try to make the deal go smoother, I shipped it his way. To accommodate Roland Geter, I was forced
to use a "third party" shipping company (Mail Boxes Etc.) to ship Federal Express and was also forced to pay the shipping charges up front, out of my pocket, ($132.58).

Roland Geter requested the package shipped to the Federal Express depot in Phoenix Arizona and he would pick it up there, apparently he does a lot of business there. The package was shipped on Friday June 26, 1998 and arrived at the Federal Express depot in Phoenix on Monday June 29, 1998. Federal Express in Phoenix notified Roland Geter several times to pick the package up which he failed to do so. The package was returned to me about 10 days later but Federal Express would not refund my shipping charges. In their words..."We are a shipping facility, not a storage facility. We provided you with a service which we expect to get paid for!"

I have contacted Roland Geter numerous times by phone and e-mail to no avail. He always tells me he is sending a check, (I requested a postal money order), and he never does. It has been two months since this started and two weeks since his last promise to send payment and still no payment. I at least wanted him to reimburse me for the shipping charges I paid out of my pocket, charges incurred as a direct result of his own accord.

I am in the process of taking action with the PA State Attorney Generals Office and law enforcement agencies in Arizona. These laptops we supposed to be used for a "Law Enforcement Project". I just wanted to warn everyone so there is no one else losing money on bad dealings with Roland Geter.
Piero

I was on the way to the hospital for surgery and could not have Fed Ex pick it up.

Mail Boxes Etc. charged me $33.00, the rest of the bill is Fed Ex charges. I have received another reply about Roland Geter ripping off another ham on the same type of deal...I wasn't the only one!
73, Piero

Roland has been playing this game for several years.. January 1996, I was
to send him a Galaxy station console UPS collect.. our shipping person
didn't read English too well and sent it non-COD so I am out the
merchandise and the shipping. At that time, I had Roland's 800 phone
number... called him about every 2 months until he changed or dropped the
800 service. Any way, always the same story, I will send you a check
tomorrow.... I had a good laugh one day when I saw that he was wanting one
of the $ 10,000 Collins transmitters... Hi.. Larry KF9E (yes Roland, I
still have all the paper work and UPS paper work.)

Regarding the post on Roland Geter, it was said:

<<SNIPPED>>
>. To accomidate Roland Geter, I was forced
>to use a "third party" shipping company (Mail Boxes Etc.) to ship
>Federal Express and was also forced to pay the shipping charges up
>front, out of my pocket, ($132.58).

What I want to know is how the shipping company charged you $132.58 to ship a notebook computer worth $200. I've sent that very same notebook via UPS COD and charges never exceeded about $50.00 at best.

Also, you are quoted as saying you were "forced to pay the shipping charges..." Did Roland have a gun to your head? I'm sorry you were a victim of this nut, but you really ought to think things through a bit more before doing such a deal as this.

Ed

Rule #1 NEVER USE MAILBOXES ETC!!! $130 to ship a laptop????? DAMN!!!!!

Rule #2 **ALWAYS** SHIP FEDEX. Number 1 for COD's!!!

Rule #3 And I learned this the hard way!!! Get **BOTH** a DAYTIME **AND**
WORK TELEPHONE NUMBER.... AND CALL THEM TO MAKE SURE HE WORKS THERE!!!

Rule #4 **NEVER** ship to a FEDEX pickup/drop off station.

Rule #5 ALWAYS REQUIRE SECURE FUNDS.

No work # = NO SHIPMENT

works everytime....any scammer would never do this due to the fact that he may
just get caught.

i've been burned about 3 times on high dollar COD shipments. One guy paid for
a laptop via FAKE cashier's checks, but the NYPD and USSS took care of that ass
and DEPORTED him ==== AFTER his "daddy" in France paid $62,000 in restitution
to all the people he scammed!!!

Words to the wise!

I would like to obtain an early Yaesu VX-1R which has been moded to recieve
full 800mhz and extended TX. don't want one someone has done a butcher job
on. Doesn't have to be in mint condition just good and work well with good
battery. If any one has one send me an e-mail with condition , accessories,
mods, version, and price delivered to Old Town, ME 04468

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
SEPTEMBER 7-11, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM) SAN DIEGO, CALIFORNIA
(HOMETOWN OF THE RADIO MAYOR & SUPERVISOR)

TALK RADIO..AROUND THE WORLD!!

TODAY - BEST OF ROGER

..reprise of his jaunt to D.C. a number of weeks ago to broadcast from the Small Business Congress put on by the National Federation of Independent Business. These the folks who create most of the jobs in America..and the folks who have joined ROGER in his campaign to shut down the IRS and begin all over again with a flatter, fairer tax collection system...check out the group out at NFIB No calls please..today's special Labor Day show is on tape..Listen at the beach...or shopping...or...

TOMORROW - SAN DIEGO & BOSTON

simulcast. HOWIE CARR is the top rated talker in New England. Tuesday we link to Howie's live broadcast on WRKO radio in Boston. He'll take calls from San Diego and all over the Northeast. You've seen Howie on C-Span recently and he's partnered with ROGER in the past to guage East Coast West Coast views of issues..it'll be fun!! Check Howie out in advance at WRKO.COM

WEDNESDAY - SAN DIEGO & GREAT BRITAIN

simulcast. JAMES WHALE is the most listened to talker in Great Britain. We'll join his national network to chat up issues of the day. We worked with James during the Au Pair case several months back. He's bright, witty and excited about patching ROGER'S show into his British network. Learn more about James from his website WWW.THE-WHALE.COM

THURSDAY - OLLIE NORTH

is ROGER'S guest host. Again we join a national network of listeners. Ollie will make special room for San Diego listeners today. Get on the phone and chat with one of America's genuine heroes and most stimulating talk show hosts. Homework website: THE OLLLIE NORTH HOME PAGE

FRIDAY - BC FIRES UP SAN DIEGO.

Blanquita Cullum is a 22 year veteran of talk radio. Hispanic, female and brighter than halogen. You've seen her on CNN, CNBC, C-Span and elsewhere. No gender gap here but BC doesn't toe any line on any issue...she's conservative but we warn you not to assume you know what she'll say about anything...(just like a woman, huh?) Learn more about BC at BQ VIEW

I am new to the Nashville area and am looking to get either a 2m or 440 rig
or maybe even a dual band if there is enough traffic up here.
Are there any clubs or groups up here to help get me going?
Thanks,
Alex

If God can prevent evil, but doesn't, then He isn't all-loving.
If God intends to prevent evil, but cannot, then He isn't omnipotent.
If God both intends to prevent evil and is capable of doing so, then
how can evil exist?

You cannot believe in God and also believe that he is not responsible
for all the churches he destroys with tornados, hurricanes, etc.

Heck, in the Wholly Babble, god(tm) admits that he(tm) CREATES evil!
Somewhere in Isaiah (45:7, if memory serves).

>Somewhere in Isaiah (45:7, if memory serves).

Hey, thanks for the tidbit, I'm arguing with a fundy who claimed God cannot coexist with evil, but thanks to your reference I can now tell him that, according to the "Wholly Babble," God created it!!! Of course, some simple logic would tell you that if God is the creator of all things then he must've created evil, but fundies cannot avoid it when the Bible tells 'em so.

Oh yeah, in my copy of the "Wholly Babble," the fundies have an annotation which supposedly resolves the contradiction. It is as follows: Heb. 'ra,' meaning "sorrow," "wretchedness," "adversity," "afflictions," "calamities," but never translated sin. God created evil only in the sense that He made sorrow, wretchedness, etc., to be the sure fruits of sin.

The fundy will then argue that man brought sin into the world with 'the fall,' which leads us all back to the problem of evil. God could've just as easily created a world in which man freely chose to do good as one in which man freely chose evil, so God is ultimately accountable for everything.

The fundy will then crawl behind faith, and die. Good riddance... .

Hi Kent,

I had a lot of fun reading your first post.
I was about to write the same thing.

God has a sense of humour. I hope Hantson will get God's help
for his state of mind, which is in a worse state than the transmitter
itself :-)

You needed someone to tell you this? God created Satan (in christian
mythology) right? And he could destroy him as well right? But he
chooses not to, right? Therefore, God is EVIL.

Hi Larry,

Keep laughing because I do have two Collins KW-1's now, thank you.
(hihi) Seriously though the last one I purchased has the cabling half
eaten up by rodents which really is no laughing matter. Very, very
unfortunate condition for a fantastic piece of equipment to be in. I
haven't pick-up the power transformer yet even after 1-1/2 yrs. but
since I snowbird 6mos a year now maybe I'll get it done.

Send me something, Larry, anything on our COD deal gone bad. My 800#
wouldn't work on my satellite telephone so it has been dormant to be
reactivated this winter back in Phoeniix. My COD purchase system
seldom fails but since you have been a patient gentleman about it I'll
act fast plus some interest for your wait - you name it. I'm the
first to admit I sometimes get ahead of myself with so many purchases
over such short periods especially while traveling. Just detail to me
what the item was, OK?f If I received it I still have it even after
two years because I very seldom sell anything.

73's, Roland - WB6LNA

I wasn't sure how to answer a question that I was ask recently. Anyone want to help me out with this one?

Q: Is there any non amateur HF communications license available?

They are looking for point to point and point to multi point Long range communications system. Portable, mobile and fix station operation. HF only no satellites. Need multi freq coverage for US communications day and night. Dont need 100% reliable at all times but daily or several times a day comms for status and supply request. SSB a must, RTTY would be a plus.

Stan,
    A better starting point would be the TOWERTALK
reflector on www.contesting.com - K7LXC will probably
get you steered in the right direction.

New or used? If new, I would talk to any Trylon dealer or, better still, try L&R (Leblanc & Royal) since this is a serious commercial-grade style tower you are looking for. I suggest these two companies since they make good products and are domestic. Domestic usually works out better due to transportation costs of, in this case, a multi-ton load of steel and import hassles and costs.

Used towers of this size are hard to come by because they are almost exclusively in commercial service and tend to get de-commissioned by tipping them over and sold as scrap.

Thanks for stopping by. I have acquired a Kenwood TM201B for thirty dollars!! Yes, there was a catch; the display does not work, and I hope in that of a snowballs chance in hell someone might have a service manual for it. The rig is about 1986 vintage. Also, if someone might have the TU-3 tone board, that would be nice too.

Tnx es 73 de Jason n1iic/ag (I upgraded last weekend!! YEEEE HAAAAA!!!)

Not sure if I posted this already, but... I have 2 MC-50 desk mics for sale
at $50/both. One mic is in great condition, works great, other mic looks
rough, base is great, works ok but has hum... inside base is evidence of
many rewirings, and I believe the audio leads being reversed is the only
problem. Please email if interested! Buyer ships COD/CONUS or prepay.
thanks,
Randy

Posted this in a prev. msg... but it was kinda lost in the questions..
Have Motorola headset/mic, behind the head for use with cap, etc, like the 'Nascar' guys use except black. Dynamic mic element. Could use earpads, these are a bit too mushy.. has top velcro adj. strap and coiled cord. Boom adjusts in/out, hinged halfway and mic pivots. works great! it's a 4pin plug now, but have the factory barrel plug (4contact) desoldered, not cut. It's model NMN6064A SP04 if u wud like to look it up at Motorola's website or elsewhere. List new: $500 Priced at $90/firm/ushipPlease email if interested!
thanks!
Randy

Hello Everyone,
     Looking for another Standard C228A dual band 2M/220Mhz. HT.
Accessories not important...already have them. HT should be in at least
very good condition and reasonably priced. "Non-working" ones considered
at the right price. Please e-mail me directly. Thanks....

Free Stamp is a brand new free e-mail service on the Internet. Free Stamp offers real (POP) e-mail accounts for free. Unlike other free e-mail services on the net, with Free Stamp you can receive rich text e-mail (with color photos and text effects), and file attachments (up to 2 MB) using MIME or UUencode, spell check your messages, and even use PGP for secure e-mail. You can use any e-mail program to check your mail including Eudora, Netscape, Microsoft, and many more. Free Stamp is fast and simple. Sign up today, you can chose your own lifetime e-mail address, which will stay with you even when you change Internet service providers.

Sign up for your free account today! Visit www.freestamp.com

Well, I thought the GP68 was the european version of the ht1000.... maybe
that's the gp900. (So whoever I said that to- I'm wrong!) I don't know
anymore.... :) It's getting too darn hard to keep up with!! So, could
someone please fill me in on the GP68 and why they are selling at FRS
prices??
thanks!

Euro-spook radio. Not for sale, legaly, in the USA. It is a keppad
programable radio like the JT-1000, but again not type accepted in the
USA. VHF is 136-172 MHz, UHF is 438-470. Uses GP-300 Mic. They are longer,
and narrower than a GP-300. Thats what I know. BiLL

Hello Everyone,
     Looking for another Standard C228A dual band 2M/220Mhz. HT.
Accessories not important...already have them. HT should be in at least
very good condition and reasonably priced. "Non-working" ones considered
at the right price. Please e-mail me directly. Thanks....

Golly Gee!
Are you a real live auctioneer?

I seem to get a bad attitude about EBAY shoved in my face!
I guess I could be the only one that feels that way?
Whats that word they use when they trash someone's http site?

                        Jack

Hello,

I was wondering if anyone knows which company made the stock radio that came with the 1984 Mazda RX7 car. I am having a static-like problem (perhaps I have to change the volume potentiometer) and I'd like to get a hold of a schematic for that radio so that I can fix it. Or if anyone knows how to fix this type of problem, any help would be wonderful.

Thanks
vread

Ok, this is kinda stupid, but..... Have a friend with dual band radio,

remote head. Not sure, but think it's an Alinco (about 8 yrs old) if not, it's kenwood, either way, this should be a generic question. Concerning the 'new' push and hold for what I suppose is relayed power on/off like most newer radios are, what would make this radio refuse to turn off?? It had to be wired thru ignition switch so it will turn off and on with the vehicle. Radio works perfectly, but it just won't turn off! Ohm meter says the switch itself on the control head is fine. any ideas??
thanks,
Randy

WANTED, THE FOLLOWING:

Kenwood MC-44 / MC-44DM (preferably "DM") microphone for a Kenwood
TM-631A radio.

Kenwood UT-220S 220 Mhz. module for a Kenwood TM-742A radio.

Kenwood TSU-6 Tone Board for a Kenwood TM-631A radio.

Kenwood TSU-7 Tone Board for a Kenwood TM-742A radio.

Standard C 228A Dual Band 2M/220Mhz. HT. Accessories not important, I
already have them, but should be in very good condition.

All above items should be in very good condition and reasonably priced.
Please e-mail your replies to me directly with details and asking price.
Thank you.

I have for sale a IC-706. Includes items below:

IC-706 MKI
FL-100 CW filter 500Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a
non-smoker. I would like $850.00 for everything. I will pay shipping
lower 48 states. I can be reached by E-mail or my phone number is
216-741-4717.

WANTED, THE FOLLOWING:

Kenwood MC-44 / MC-44DM (preferably "DM") microphone for a Kenwood TM-631A radio.

FOUND Kenwood UT-220S 220 Mhz. module for a Kenwood TM-742A radio. **FOUND**

Kenwood TSU-6 Tone Board for a Kenwood TM-631A radio.

Kenwood TSU-7 Tone Board for a Kenwood TM-742A radio.

Standard C 228A Dual Band 2M/220Mhz. HT. Accessories not important, I already have them, but should be in very good condition.

All above items should be in very good condition and reasonably priced. Please e-mail your replies to me directly with details and asking price. Thank you.

Hello and thanks for reading this message

The name here is Doug. I live in Walkerton in mid western Ontario. My Son lives in Toronto very near the VE3ULR hub. I can connect to Shelburn witch is in the ulr linking system. My problem arises with getting the linking codes. My son has sent his membership in to ULR they have cashed the cheque over a month ago but we have not received anything back form them. My son has written them emails but has had no response.
I was wondering if someone could help us. A contact person, any suggestion, what ever. I don't always have time to watch this news group so would you please email me at dberry@wcl.on.ca

Thank in advance for your help 73's Doug VA3DMB

Anyone have any experience rewinding output transformers that can give me some idea of what to expect? I have a 100 watt output tranny that will do 70 V (and higher) line outputs from a pair of 807s.

The amplifier is complete and I have put new 6SN7s and 807s etc. in it.

Tranny looks nice: drop-through, shrouded with nice bells.

Is it POSSIBLE to rewind something like that?

For the present 70 volt line, at 100 watts I figured the Zout is about 49 ohms or so, and so I would need to count the turns on the secondary and then divide by what? I think I would use the square root of 49/8 to get 8 ohms out...
but my memory is short and the text book is buried somewhere.

OK here it is...

Lets see, N2/N1 = SQRT(Z2/Z1)
So if N2 is the primary and N1 is the secondary, I want Z1 to go from 49 to 8 ohms so what must I do to the number of turns N1? Decrease them by approximately the square root of 6. A ratio of about 1/2.45 times the original turns count.

Do you agree?

That comes out as about 0.408 times the original number of secondary turns

What fun. Now IF I can JUST get this darn thing APART!

Any recommendations on removing laminations?
Chemical solvents OK? What should I expect to encounter?

So I wind off the 70 V line secondary and count the turns as I go.
That gives me the original N1 and then I use thicker wire, but wind a new secondary with less turns by a factor of 0.408 times the original.

Can anyone advise?

There are commercially available chemical strippers that may will soften the varnish insulation with which most transformers are wound. However, if your transformers are "potted" which means they are sealed in a "water tight" compound, the only way I have been able to remove this compound is by burning the transformer. Someone else in the group may have knowledge of removing potting compound with chemicals but I do not know of any.
So, the way I would go about it is this:
1) Unbolt the end bells. If they are bradded or pop riveted on, you will have to grind off or drill out the pop rivets. The endbells may be stuck to the lamination and require prying. I use a flat blade screwdriver and a large locking handle knife. I actually hammer the knife edge in between the end bells and the laminations creating a split. Then insert the screw driver and twist. Work your way all the way around the end bell.
2) Burn to remove the potting compound. An outdoor "cajun cooker" works good for this. Slowly heat the tranformer over open flame. Keep drafts away as they will cool the transformer. You may even set a coffee can on top to keep out the drafts.
If a "cajun cooker" is not available you can actually burn the transformer on an open wood fire. I have built an outdoor "campfire" type fire and set the transformers right on top of the burning wood. (This is how motor shops burnt motors and transformers years ago.) When the tranformer begins smoking, burning has begun. When the transfomer quits smoking, remove it from the fire and set it aside to cool. Do not let the transformer remain on the fire after ti has quit smoking!!! Burning on either a wood fire or "cajun cooker" should take about 15 to 20 minutes. Be warned, the lead wires will have all the insulation burnt off so colors will disappear.
3) After the transformer is completly cool you should be able to tap the laminations abd see ashes fall from the windings. Blow, dust, or vacuum the ashes as best you can being very carefull not to disturb the windings. Draw a sketch of the tranformer making note of the position of the lead wires and where each wire enters and exits from the transformer. You should be able to see where the lead wires are twisted and welded to the transformer winding lead wires. Carefully clean burnt varnish from coil leads and use a caliper or michrometer to measure the diameter of the bare wire. Make notes of these diameters on your sketch....

** I can take you completly though the process if I haven't scared you away yet. Let me know and I will continue. If this is too much detail for the group, I will email it to you privately.
You can rewind your tranformer if you really want but it will involve fabricating a coil jig and much tedious work. Also, your coil probably will not fit in your laminations on the first and maybe second try. I do it all the time but then again I have been doing it for 30 years and what seems simple to me may be difficult for others...
Let me know if you want me to continue...   Jim Shumberg

This is great stuff - thank you....

Recently, "Jim S. (In Houston)" <jim@drivesys.com> wrote:

>Let me know if you want me to continue... Jim Shumberg

Yes please do!

I wonder though - is burning ALWAYS necessary?

This is not a potted transformer, but has the usual black varnish finish on the laminations only. If I burn it, won't it destroy the fish paper and some of the other insulation materials?

Also, can't I HAND-WIND the new secondary?

I'd sure like to hear the rest of the story. This is exactly the kind
of thing that's great to read on the NGs.

And some of the guys are hashing out mexican food. I mean, I've seen some
recipies in my day, but wooohoo!

BBQ'ed OPT.   Finish the instructions, please.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
WEDNESDAY MAY 13TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - ROGER keeps tabs on the face off between Indian tribes and the Federal Gummint!! We've got a call into Governor Wilson's office to chat up his indian compact negotiator..And we've pulled up and printed all 130 pages of the Pala compact..homework on this show is worse than non-public school...

ALSO..ROGER visits with Cokie Roberts..in town on book tour. Her volume "We Are Our Mothers' Daughters." Hey, every day is Mothers' Day, right??...

ALSO we talk with one of the California authors of Prop 226 (to counter union claims that prop has roots out of state..not true)...

AND FINALLY but most important we'll spend some time with Huntington Beach Congressman Dana Rohrabacher..he is as upset as ROGER over U.S. aerospace firms giving Red China technology to deliver nuclear laden Long March missiles to USA targets. Hey we can't get a Thaad missile (anti scud..supposedly..but has failed in 8 tests so far) to peform properly in test range exercise and we're enabling Communist China to develop sophisticated Mirv systems aimed at America. What be wrong with this picture??? Buckle up Pepto Time!!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY MAY 14TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - Another Shoe Horn Day!! ROGER gets update on plans to clean up San Diego Schools..Thousands of volunteers turn out on June 6th to do the job that very well paid school employees have not done..Yikes..but ROGER will be amongst the volunteers.

AND Duncan Hunter visits to update us on Cosco (Chinese Overseas Shipping Company) efforts to invade port of Longbeach and his efforts to thwart...

ALSO round one..the first HEDGECOCK DEBATE..this the top three candidates for a seat on the Grossmont Union High Board of Trustees...

THEN later..Duke Cunningham stops in via phone from D.C. to chat up a federal plan to banish bi-lingual education...full boat..but with ROGER'S usual finesse we still get to all your topics..wow!!

TODAY ON TV - ROGER on the KUSI-TV Morning News at about 7:30am...Topic: Grandson of Prop A..Wilson's first convention center prop failed..ROGER'S Prop A succeeded and now San Diego voters face Prop A three. Won't be a surprise how we feel about this vote but you'll want to know ROGER'S reasoning.

AND YES..KUSI will provide a counter view so opposition gets equal time to make it's case for rejecting convention center expansion and turning away conventions and discouraging new hotel construction..and ...well you get the point...
Cable 9/Channel 51.

     If anyone wants to put a little pep into Roger's sleepy show, just call in and ask him how many of his old cronies from J. David & Co. are still in jail... and then ask him why he isn't San Diego's mayor anymore!

     Then just lean back and enjoy the fireworks!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
FRIDAY MAY 15TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

LET THE DEBATES BEGIN!!
(a lot of work to do between now and June 2nd)

TODAY - THE HEDGECOCK DEBATES..the Education Races con't...The County Board of Education race and the state Superintendent of Public Instruction race. Sorry to double up on you but education is like at the top of ROGER'S agenda. We've gotta be doing a better job and that means we have to hire exceptional leadership.

ALSO..we say howdy and congratulations to our bud Martin Blair, owner (along with wife) of Kansas City Bar-B-Que..(where the movie Top Gun was partially filmed). KC BQ celebrates 15 years as a major downtown tourist trap (and we mean that most affectionately)..Martin is also our Night Train supplier..official Community Forum beverage..

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY MAY 18TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

THIS WEEK ON THE ROGER HEDGECOCK SHOW

MONDAY - Candidates for the 78th State Assembly seat debate. Also a story that will boil your blood. We'll disclaim this segment beforehand..you'll want to be off the hiway!!

TUESDAY - San Diego City Council District #2 Debate. Also details on our Parent-Child Expo (maybe we can give away some tickets too?) on May 25th.

WEDNESDAY - 76th State Assembly Debate.

THURSDAY - Superior Court Judge Office #10 debate (these judgeship debates are critical..you decide who dispenses justice).

FRIDAY - Prop 224 debate..AND all week long we make sure there is time for your 2-cents on most any topic you conjure up!!!

(Also..somebody please call in and ask ROGER why he's been stalking garbage trucks for the past nine weeks. Sorry to say it's true..an unpleasant, if not unhealthy fixation..therapy required?)

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY MAY 19TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

SOME STORIES GRAB YOU !!
(Lora Davis story is one)

ROGER seldom pre-books a segment for a full hour..other than many-candidate political debates (that demand 60 minutes just to get to basic issue views) but he knew going in yesterday that he wanted to spend a full hour with Lora Davis. She was raped, stabbed (40-plus times) and left near death back in 1992. Her assailant found guilty of attempted murder..sentenced to a mere 15 years (half of which he doesn't serve because of old prison good time regs)..and will hit the bricks (coming to a neighborhood near you?) in April of next year. Even the judge in the case was appalled at how little time he was able to sentence Arthur Hughes..told the court in the sentencing hearing that he'd put him away for 100 years if possible. ROGER notes that we may get a tad complacent about crime following constant headlines saying crime stats have dropped..not after hearing Lora.

Victims still fall thru the cracks. Physical and emotional scars do not disappear...the dead do not come to life...when crime stats fall...and flaws in the criminal justice system remain!! It took courage for Lora to go public..especially at a time when her would be killer is about to be released. ROGER makes the time to tell these stories..in full..in detail!!!

ROGER takes Lora's story to the KUSI TV Morning News this morning. She joins ROGER to re-tell her story for viewing audience..tune in cable 9/channel 51 at about 7:30am..No oatmeal!!!

TODAY ON THE RADIO - San Diego City Council District # 2 Debate. Seatholder Byron Wear and challengers Michael Zucchet, David Diehl and Vonn Marie May. Also details on Memorial Day Parent/Child Expo at Del Mar Fairgrounds. ROGER broadcasts live (we work all the holidays..yikes!!)... See below, please. And we promise plenty of time for Open Phones!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
WEDNESDAY MAY 20TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - THE HEDGECOCK DEBATES continue..the 76th State Assembly race..Seat holder Susan Davis faces opponents Duane Admire, Linda Escher-Davis and Edward Teyssier.

AND our first judicial debate sans the sitting judge. (see above)..Anthony C. Joseph refuses to talk about why you should keep him on the bench at Superior Court Office #08. His opponent will be in studio (again recall that this dude...an attorney who may have to face Joseph...is not about to make Joseph real happy with this trying to take his job stuff)..So hats off to Gerald W.
Hokstad. (courage..isn't that one of the attributes we want in a Superior Court Judge?)..listen up!!

.radio

Tim,

This is just another example of your campaign of mis-information
and lying here in rec.radio.shortwave.

Your on-going plan is to accuse your opponents of the very tactics
that you have been employing. For example, your claims of
jamming the Liberty Net.

It is *YOU* that jams the Liberty Net. Not the net members that
have been there for many years. Your lies may confuse the casual
readers, but not anyone that is knowledgeable.

You try to paint a picture of yourself, as an innocent ham, that just
happens to be using 3.950 (ie. laying in wait) and then suddenly
the evil net members come along and interrupt your political
ranting, music playing, and tarzan yells.

What is it that you fear? Why do you continually attempt to disrupt
the conversation that occurs on 3.950?

Could it be the dissemination of ideas and opinions that you don't
agree with? If these ideas are so offensive to you, why not just
change your frequency, and transmit somewhere else?

Only a socialist or a marxist would advocate the censorship of ideas
that didn't fall into line with the state. And that's the business you
are
in, Tim.

Censorship. -- Preventing the free flow of opinions and ideas.

You do this in two ways:

1) By physically preventing the reception of signals xmitted on 3.950
2) By posing as a victim, claiming that you have a 'right' to be there
    over other hams.

And that's the "Big Lie" that you and your fellow jammers are using.
You keep whining about how you're the victim. And you
know that sooner or later some percentage of the readers will start to
believe you.

The "Big Lie" worked for your idol, Adolph Hitler, and you are hoping
that it will work for you.

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
FRIDAY MAY 22ND, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY - THE HEDGECOCK DEBATES continue..Prop 224..Much advertised about issue over whether this measure will create a giant new Caltrans bureaucracy or increase privatization!!

Also, a look at the 1998 concerts set for Humphrey's By The Bay.

And, ROCKIN' with ROGER!!

Another major broadcast event..Memorial Day at Del Mar Fairgrounds. Fifth annual Parent/Child Expo. ROGER uses this venue to hold another series of internet seminars for parents...(to keep children safe on the world wide web/e-mail and out of dangerous chat rooms) a campaign he jump started back in December last year during another trek to D.C. We take the show to the Expo on May 25th...you shud come out..find out more about the Expo on their website Parent And Child.Com

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY MAY 25TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

THE WEEK AHEAD - TODAY-MEMORIAL DAY...ROGER is live at the Parent-Child Expo at the Del Mar Fairgrounds. Live audience, great fun, educational and serious info..lots of stuff for kids to do and parents to know about. One of the major attractions this year will be a continuation of ROGER'S internet seminars to help parents protect their children on the internet..Our internet expert Bob Shepard will conduct 45 minute seminars thru-out the three day run of the Expo (23, 25 and 25 of May)..ROGER is live only on Monday..so come by, say hi and introduce us to your kids..

TOMORROW - THE HEDGECOCK DEBATES continue..Propositions 223 and 226..

WEDNESDAY - LIVE REMOTE..ROGER discusses Primary matters with distinquished news panel, live at the San Diego Convention Center..see below, please.

THURSDAY - PROP 227 DEBATE live on location..location TBA..will be video taped by Cox Commo Channel 4 for play on the cable channel (9pm that evening the first airing)..

FRIDAY - GOP GOVERNOR'S DEBATE..live on remote at Nieman's Restaurant in Carlsbad. More details later in the week!!

YOU ARE ALSO INVITED to luncheon with ROGER and members of the Downtown San Diego Partnership Wednesday May 27th at the San Diego Convention Center. ROGER and a panel of local journalists (Cathy Clark of KUSI-TV; Joseph Perkins, San Diego U-T; Tony Perry, L-A Times; Kim Peterson, SD Daily Transcript and John Warren, Voice and Viewpoint) discuss the many issues and candidates playing roles in the June 2nd CA Primary. ROGER broadcasts live from the luncheon. First part of the show (12:20-2:00pm) will be the panel discussion with questions from live audience of 300 or more..second part (2:00 - 3:00pm) devoted exclusively to a debate of SD Prop A (the Convention Center
expansion matter)..featuring Bruce Henderson and Scott Barnett among others. You may attend. There is a fee..if you are a D-Town Partnership member the ducat is $35.00..if you are a non-member who may have an interest in joining, the tab is $45.00. RSVP please at 619-234-0201. This show will throw off mega sparks!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
TUESDAY MAY 26TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY ON TV...Call to ROGER'S show prompts parents revolt in Santee. School district decides to teach failed "whole language" program..a program that isn't even sanctioned by the state Dept of Public Instruction (which means state won't cough up any funds, which means district will

have to pirate loot from other district needs..to support a reading program that doesn't work).

Thanks to ROGER'S help irate parents have begun to network and vow to fire three school board members who have to face the voters this fall..meet one po'ed mom and find out how citizens can make a difference..the power of one, plus one, plus one..(you get the idea).. Tune in about 7:30am..KUSI-TV Morning News with Stan, Laura and Co..cable 9/channel 51

TODAY ON THE RADIO - THE HEDGECOCK DEBATES continue..Propositions 223 and 226..

WEDNESDAY - LIVE REMOTE..ROGER discusses Primary matters with distinquished news panel, live at the San Diego Convention Center..see below, please.

THURSDAY - PROP 227 DEBATE live on location..location TBA..will be video taped by Cox Commo Channel 4 for play on the cable channel (9pm that evening the first airing)..

FRIDAY - GOP GOVERNOR'S DEBATE..live on remote at Nieman's Restaurant in Carlsbad. Come up..meet the candidates in person!!!!!!

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
THURSDAY MAY 28TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TODAY ON THE RADIO - THE HEDGECOCK DEBATES continue..Prop 227. ROGER takes the show over the Airwatch Traffic studios..(this a Jacor venture fulla fiber optic stuff and computers and cameras) on Engineer Road to host Ron Unz, the inspiration-author behind the English For The Children initiative which is now the 227 proposition. In opposition we've invited Holli Thier, statewide spokesperson for Citizens For An Educated America-No on Prop 227. She's flying in from L-A after flying there from San Francisco etc..busy last days before the vote. Debate happens 1:30 until 3:00 and will be video taped by Cox Cable, Channel 4 for replay betwixt now and June 2nd (first play may be 9pm tonight)Tune in, listen up, get on the phone and help make this a most lively discussion..the nation is watching our vote on this ballot issue!!!

TODAY ON TV - ROGER on the KUSI-TV Morning News..with guests to chat up the one student, two student, three protest over Newt Gingrich's commencement address at UCSD. A university employee of 18 years standing joins us...he's appalled that student minds are closing at such a young age..we also have invited a student member of the protest against Newt's visit. Chat comes as the Chancellor schedules a 1:30 Town Meeting at the Price Center today to discuss the students concerns over visit. Most unusual, huh..We don't seem to recall similar Town Meetings last year when Clinton commenced..GOP & conservative students were most respectful. double hummmmmm. Tune in cable 9/channel 51 about 7:30am..

THE ROGER HEDGECOCK SHOW
SOUTHERN CALIFORNIA'S COMMUNITY FORUM
FRIDAY MAY 29TH, 1998
NEWSRADIO 600 KOGO (12:20 - 3:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

ROGER invites Darrell Issa and Matt Fong to lunch today..last minute discussion of matters political prior to Tuesday's primary vote. YOU ARE INVITED to come by and meet the candidates in person. We are at Neiman's Restaurant, 300 Carlsbad Village Drive!! This will not be a stuffy, formal, parliamentarian debate..it'll be more like lunch with friends and a chat about the issues, the ads, the newspaper pieces, the candidates mood and energy level going into the final hours..and like that.

ROGER is still recovering but he (like his listeners) relishes little more than chewing the fat with men and women who seek public service. If you can't join us in person, listen on the radio..we promise engaging, informative and ocassionally humorous conversation.. and we promise to get your opinion, comment or question for the candidates on the air. Hey, it's been a long week....sneak out for lunch (with us) and then don't go back to the office, route or etc

ROGER ON RADIO AND TV...Cox Cable/Channel 4 video taped yesterdays Prop 227 debate between Ron Unz (author of prop) and Holli Thier (No on Prop 227) with ROGER caught in the middle. Good radio and just as good TV (the part

where ROGER worked to get Holli to admit that we currently have a "bilingual" mandate was worth admission price). You may view the hour long debate three times...first: tonight at 10pm..Saturday at 5pm and finally on Sunday at 9pm... on Cox Cable/Channel 4. And we shud mention that both Ron and Holli flew into San Diego especially to debate on ROGER'S show.

Am looking for a repeater controller.Would need to have voice synthesizer and autopatch is not a necessary thing. Would be willing to buy if it is under 250.00 or above that price mark I would be interested in trading some gear.

Available gear:
ic 727?? i don't remember the mod # but believ that's it. it's hf + 6m hasonly been used for maybe 20 bours at one field day about 3 years ago.

Also have dualband ht's available:
ic-w2a
standard c-528a
Both have batts, and some other misc accessories.

also have dualband commercial mobile.
alinco ald-24t
single band rx at one time. comes with tt mic.

anything interest you????   let me know.   de RodEkholm Jr.

Does anyone know anything about the FT270-R? I cannot find anything on the
radio, but I know it exists because I own one. Thanks

Oops. spelled Yaesu wrong. Bad Typing. The radio is a 2 meter FM mobile,
has a DTMF mic, and 10 memory channels. Any info is very much appreciated.

Thanks,

Man, what a wierd joke...

> I think that everyone that is on these newsgroup's is perveted!

How are you "on a newsgroup" I wonder? :)
Maybe my english is bad, but I don't understand what that's
supposed to mean...

The author of that message needs mental support...
Even if it's just a bad joke...

I am interested in getting started in monitoring shortwave radio broadcasts
and two-way communications that are on the shortwave bands. I would be
interested in listening to military, government, and other two-way
communications especially. Any suggestions about the equipment to get, and
frequencies to tune for the most activity please let me know.
cnbryant@aol.com or rcca@worldnet.att.net

Thanks in advance,
Christian

  Start off with a copy of the World Radio and TV Handbook and/or
  the Passport To Worldband Radio. Then get subscriptions to Monitoring
  times and Pop Communications magazine , then join WUN and then
  search the WEB for shortwave radio and away you go.

After all that, he will have no money left to buy a radio! The best thing to do, would be to post a question just like the one he did, and get some advice on "equipment" and "frequencies" from other newsgroup readers. Buying all the above would come to the same price as an inexpensive SW receiver. I know, I have all the above (except for WUN)

   WUN is free, take what I suggested in steps. Get WRTH, if you are
   still interested move on to the next steps etc. He will get a lot
   more good info that way than a lot of bits and pieces from posts.

  After you get started and have questions the posts will help. But to
  find out basic, need to know info. follow the steps I outlined or
  something close to it. Good Luck

That makes more sense, it just sounded kind of funny the first time I

read it, it almost seemed like he should buy all that stuff at once and have no money for the radio! WRTH seems like it is not of much use though without having a radio allready, Passport might be a better first choice, as it has some reviews on radios and some other info that could help in deciding what to buy.

I hate to disappoint you, but God loves sin. If it weren't for sin, God would be standing in the unemployment line looking for something to do. Cops need crime, God needs sin, Democrats need Republicans, and

you need a swift kick in the ass!

Buying a Passport ($20) and a magazine sub ($20) are the best
investments a beginner can make IMHO. $40 doesn't buy a radio good
enough to pick up most of the frequencies you might give him for free
(although it might buy a wire antenna)!

You can't buy all he mentioned for only $40. You missed one of the books, and another magazine subscription. A one year subscription to each of the 2 mentioned magazines is $50 alone!! The cost for this AND the books cost around $90, for which you can buy a REAL NICE used SW reciever!

   Recently, I got a job wih a local college radio station (KWVA 88.1 Eugene, Oregon!!!!). To my dismy, there is a -very- small amount of rockabilly stuff to play. I was wondering if anyone knew how to -inexpensively- get more stuff for the station. Do labels send stuff out? If anyone could help me out, I'd apprecitae it.

Jimmy Baron from 99X needs a new tune so we gave him one. This highly desired .wav file can be found on Atlanta Checker Cab's web site at:

http://www.atlantachecker.com

under the News section. Or if you really want to, you can get to it directly at:

http://www.atlantachecker.com/jimmy.html

What is this guy's problem anyhow? He said he drove a taxi for four years in
LA, maybe he had a bad experience which has traumatized him. One thing is for
sure: At the present time he is not qualified to sit on the taxi commission that our
Mayor has appointed him to, apparently with little thought about what message
this sends to Atlanta taxi drivers and their customers. We think perhaps Jimmy
needs a one way ride to the airport where he can catch a Delta back to the North
which he seems to like so much. I guess he prefers NY cab drivers!!

I agree that Jimmy probably doesn't have the background to be in that position..... You need to change the background on the Jimmy Page in order to make it more readable.

I heard Mr. Ruben Famulewa on the radio that day. To me, he did closely represent a certain very negative ethnic "stereotype". He seemed unable to really explain himself, and instead resorted to repeating the same non-explaination over and over as if it would gain validity over time.

I agree with Jimmy on this one.

Also, whoever designed your website does a very sloppy job. Among other things, check your timeline out, there is a future date posted for a past event. Hope you are doing the site in-house, and not actually paying a company for it.

-Spanky

I would like to buy a good used Ham IV or Tailtwister rotator.

e-mail me with your info.

Thanks,
John

Hi,

I am trying to obtain two Communique HX507 hand held two way radio's, I have a complete system (ie base stn, chargers, batteries etc) apart from two bodies and would like to make use of them. I am told these units are about 7yrs old and are no longer made. If anyone has any for sale or could point me in the right direction I would be most grateful.

Regards,
Andy Daws

Looking to buy accessories for Icom IC-2SRA.

Interested in the following items:

HS-60 Headset
HM-65 or HM-70 Speaker microphone
BA-11 Bottom Cap
MB-20 Alligator Clip

Will consider other usable Icom Accessories.

Please respond by email to rca@saber.net

Thank you.

I have posted the collection of BC-series radio pictures today.
These are the old military radios that many enjoy.

You can find them in the newsgroup:

alt.binaries.pictures.radio

Comments?

If your internet provider is not getting that newsgroup for you, you
should insist that they get it!!

(slightly TV-related as you can get Radio 4 via a Sky decoder :)

Does anyone have the Omnibus on tape, or know where I can get hold of a summary
of what happened during the past week (there's bound to be a Website
somewhere :)

Thanks in advance,
     Dom

Chris Harrison sends out weekly summaries of The Archers.
His website URL is http://www.icparc.ic.ac.uk/~cah1/

You might also be interested to know that there is a newsgroup for The
Archers: uk.media.radio.archers

I get sick of the dozens of get-rich-quick spams I receive in my mailbox and read on the newsgroups I cover.

But one day...I don't know, I must have been suffering from low blood sugar...I received the attached message and actually READ it.

Now, I don't know the author from Adam. But I figured, I get so many of these things, maybe there's something to it. And anyway, this guy's not asking for $50 in return for the mystical secrets of bulk e-mailing or multi-level marketing by fax.

It's just 5 bucks and, of course, $1.60 for the stamps.

So, just for fun, I did it. And I've already started receiving money. Not thousands...yet. But I've received more than enough to recoup my initial investment.

If $6.60 ($5 plus the stamps, remember?) is going to force you to miss the rent this month, PLEASE don't do this.

But if you are curious, like me, then go ahead...give it a shot.

What's the worst that can happen? At least you'll have a story to tell. And how many people even know how to buy one of those for $5.

Good luck!

==========

Please Help me, help you, earn Extra Money $$$

YES IT WORKS! I was surprised myself--read this!!! I still can't believe it worked! But don't forget this : HONESTY IS THE BEST POLICY. You don't need to cheat. The basic idea to make the money!!

Well, here it goes: A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a joke," but like most of us I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it.

I knew that that was the opportunity I had waited for a long time. I thought it was about time that the money of the world gets into the right hands! OURS, right? I never had a doubt that this thing will actually work and even if it didn't, what were 5 stamps and $5.00 for a try?

As I mentioned before, like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Now, that's how your story WILL sound like, too if you participate:

Well GUESS WHAT!!... with in 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in .. .

Let me tell you how this works and most importantly, Why it works....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5

$1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 Cindy Hamm
5121 Ohio River Rd.
Huntington, WV. 25702
USA

#2 Carolyn Davidson
1225 9th Ave.
Huntington, WV 25701
USA

#3 Nick Sherman
9655 SW No. Dakota St. #54
Tigard, OR 97223
USA

#4 Keith Harmeyer
221 Claremont Road
Ridgewood, NJ 07450
USA

#5 Alex Dares (Apt# 611B)
M.M O'Brien Hall,
5217 Morris St.
Halifax, N.S.
Canada

STEP 2: Now take the #1 name off the list that you see above, move the other names up (2 becomes 1, 3 becomes 2, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make! Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS: 1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.   NOW POST AWAY!

FOR INTERNET EXPLORER: It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.   Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!   **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

This entire principle works because it is in a format of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money. Those below THEM will continue because THEY want to get the cash etc.

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 and start posting again. The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! And this will go on and on and on and on.... get the picture? Well, there's 5,000,000,000 people on the world and most of them will eventually end up being hooked into the internet. So there are virtually unlimited resources. Of course this will work the best at the very beginning so the faster you post, the better for YOU!

So can you afford $5.00 and see if it really works?? I think so!

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work.

You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!! GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH.

**By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of

the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

Cool, all these pointers, I don't need to post the information myself :)

The summaries are at that URL, alternatively I maintain a mailing list
to which I send them weekly (I'm about to send out last week's
2-6/March).

: So do I. Think rationally: this is a skydiving NG.

A hint to folks out there. *Please* check your headers before you post.
This didn't just go to the skydiving NG, but also to six other groups to
which it was equally irrelevant.

If you don't know how to set the headers, your Postmaster or Sysadmin or
Help Desk should be able to help you.

$50,000.00 for only $5.00 within 2 MONTHS?????
==========

You gotta be crazy! How on earth do you think you can buy 50 grand
for lousy 5 bucks? Well, that's what I was wondering, too until I
came across this letter.

First of all, IT'S PERFECTLY LEGAL! (Call 1-800-725-2161) if you
have any questions about the following opportunity to make
$50,000.00 and that probably WITHIN LESS THAN TWO MONTHS!

==========
Let me tell you how this works and most importantly, Why it works....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 Phil Walther Jr.
9495 Annapolis Lane North
Maple Grove, MN 55369

#2 C. E. Burkman
170 University Ave. W
Suite 12-129
Waterloo, Ontario
N2L 3E9

#3 A. Bailey
1207 Reeves Road
Plainfield, IN 46168

#4 J. Martin
P.O. Box 2292
Reston, Va. 20190

#5 M. Soria
872 Kasipagan St. Mandaluyong City
Philippines

STEP 2: Now take the #1 name off the list that you see above, move the other names up (2 becomes 1, 3 becomes 2, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the

following:

FOR NETSCAPE USERS:
1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

**If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply

use a search utility and type "Forte Free Agent". You should be able to find it.**

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

This entire principle works because it is in a format of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money. Those below THEM will continue because THEY want to get the cash etc.

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 and start posting again.
The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! And this will go on and on and on and on.... get the picture? Well, there's 5,000,000,000 people on the world and most of them will eventually end up being hooked into the internet. So there are virtually unlimited resources. Of course this will work the best at the very beginning so the faster you post, the better for YOU!

So can you afford $5.00 and see if it really works?? I think so! People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when

there are tons of new honest users and new honest works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income.   Thanks once again...

If anybody is interested in the Austin music scene, there's a new way to stay in touch with what's going on. Anybody that's go Internet access and email can get an email newsletter from CitySearch just by signing up. They've got email newsletters on other topics too, like outdoors recreation and other stuff. The best way to do it is to log on to http://austin.citysearch.com and click on Scout! From there, just fill in the form with your interests and then they'll start sending you what you want. There's other cool music stuff on the site also.

On the beach? Tired of the sand?

Jobs are waiting for you. Good jobs. Real jobs with real stations.
Come on over and have a look.

Or maybe you are seeking that special talent. From GM to board-op
we can find your (wo)man. Airwaves Media's great new Employment
Connection is there for you, 24/7 and gratis! Glad to help.

Just point your Navigator or Explorer to http;//www.airwaves.com/job.html
and read the introduction. Then click and view job offers and
positions sought from miles around. All email and web addresses are
hyperlinks so visiting the page or dropping a quick email is simple.

If you don't see what you need online, no problem. Just click and
post your own help wanted or position wanted ad. We'll add it to the
database for you. Watch your prospects improve.

So what are ya waiting for? C'mon down...

55 Foot, 3 Section Heavy Duty Galvanized Crank-Up Antenna Tower.
Cable fairly new but pulleys probably need replacing. Minor surface
rust only at base. Purchased used last year but never put up. Tower
is located in Cape Coral Florida which is on the SW Coast. This tower
is approx 24' long in it's down position and weighs about 250-300
pounds. First $175.00 CASH (FIRM) takes it away. Don't miss this
one. Please e-mail me with any questions you might have about this
tower.

mrymer@peganet.com

Thanks,
Mike

The radio is only 4 Months old and in GREAT condition. Still have box, cables and mounting bracket. This radio has been moded for out of band TX and will recieve the 900 Mhz cordless/ ham band which is now blocked on newer ft8000 and ft8100. Cellular is still blocked and I know of no mod for this. Will recieve 110Mhz (AM) ~ 550Mhz /
750Mhz~1330Mhz.

$430.00+shipping.

On the beach? Tired of the grit? Need a new fit?

Or maybe you are seeking that special talent. From GM to board-op you can probably find your (wo)man. Airwaves Media's great new Employment Connection is there for you, 24/7 and gratis! Glad to help.

Jobs are waiting for you. Good jobs. Real jobs with real stations. as well as an available talent pool that runs the gamut from that willing rookie to the seasoned pro.

Just point your Navigator, Communicator, Lynx or Explorer to http;//www.airwaves.com/job.html and read the introduction. Then click and view job offers and positions sought from miles around. All email and web addresses are hyperlinks so visiting the page or dropping a quick email is simple.

If you don't see what you need online, no problem. Just click and post your own help wanted or position wanted ad. We'll add it to the database for you. Watch your prospects improve.

So what are ya waiting for? C'mon down...

   ** It's Free ** ** It's Free ** ** It's Free ** ** It's Free **

Hi, I'll let you in on a little secret here. Did you know that you can make your very own cable TV descrambler with parts that you can buy at your local electronics store for under 20 dollars? Well, now you know; and knowing is half the battle. :) But seriously, it really is that simple. For the low low price of $10 (US dollars) you will promptly recieve detailed, but yet very simple, instructions on how to make your very own cable TV descrambler. It's a small price to pay for the benefits of what this box can bring you. For these instructions, please send $10 cash (US dollars only please) to :

SIR THOMAS
3742 E. Charter Oak rd.
Phoenix, AZ 85032

Remember to include your name and address so I know where to send it.

LITTLE KNOWN FACT : It is NOT illegal to own your own cable box, you don't have to use the one provided by your local cable company. Just like it is not illegal to own your own telephone, you don't have to get your phone from your local telephone company like it used to be.

Please take note : The instructions are intended for educational purposes only. While the instructions will allow you to build a fully functional and operational cable descrambler box, it is not to be used illegally to recieve free cable TV. There is no way the cable company can find out, but it is a matter of honor and personal ethics/morals. If you decide to use the box that you make, please notify your local cable company so that they can bill you for the services that you recieve.

DON'T WAIT, SEND YOUR ORDER IN TODAY, YOU WON'T REGRET IT! Your total investment is less than $30 after you buy the parts from the store. It's a small price to pay for the hours and hours of enjoyment cable television will bring you.

I have 2 Kenwood TK-340 hand held radios. Looking for information on
them. They currently on a repeater but I don't know who's. I just bought
these at a pawn shop and have 2 weeks to decide if to keep them.

Info I am looking for:

What freq range are these: My guess is 440-470

Watts:

What is this booster-pac (cig lighter on one side - AC DC converter on
the other)

What type of accessories are available and where.

THANKS VERY MUCH

Change the ground point or the length of the cable TV line. It is
probably near to a multiple of your transmit frequency.
If the cable is not properly grounded where it enters the house it should
be.

55 Foot, 3 Section Heavy Duty Galvanized Crank-Up Antenna Tower.
Cable fairly new but pulleys probably need replacing. Minor surface rust only at base. Purchased used last year but never put up. Tower is located in Cape Coral Florida which is on the SW Coast. This tower is approx 24' long in it's down position and weighs about 250-300 pounds. First $175.00 CASH (FIRM) takes it away. Don't miss this one. Please e-mail me with any questions you might have about this tower.

mrymer@peganet.com

Thanks,
Mike

Hello to all,
Does anyone have a case to fit the FT-51R with the large battery pack
(FNB-38) that they are not using? If so and you want to sell it
please e-mail me direct (remove the NO.JUNKMAIL from my address)

Thanks, Mark

There has been so much "Bitching" and other bad vibes on these news groups that I just had to brag about the Hams that I have had the honor to have dealt with.
Here are a few of the guys that have went that extra mile when I requested help.
Mike KF4LUW, Ed W7DXZ, Fred VE3CFZ, and Tom DeFelice who I did not get a call sign from. I know there have been many others, but I did not get the chance to copy their Call Sign. These guys make me proud to be a fellow Ham. Don Smith KB6GQA

Hi Everybody!
   My highschool seems to have developed an interest in the idea of
building an on-campus local FM radio station. So I, being a bit of a geek,
have decided to take it upon myself to attempt to compile all information
possible on the subject- what equipment is needed, what FCC liscences are
necessary, where we could possibly look for grants, etc. So, if anyone has
any useful and valid information on the subject, please reply. Thanks.
               -Ian the Grate

PS Also, what is needed to pass the FCC tech test(age requirements, degrees)?

Ian,
Dial-up the Federal Cookie Company with a search engine, there you'll
find the information you need.
I believe you only have one option and that is to run a 30 watt Carrier
Current Radiating Cable system. Check out Part 15 of the Fedz rules.
LPB Inc can sell you the basic tx for 800 USD but you can expect to
spend far in excess of this amount for the whole affair.

Good luck, hope I've been of some help.

Phil G4ZOW in the UK.
They should give you all 1KW, that's what I say.

Yaesu FT 101 EX 10-160 meter transceiver for sale. Mint condition, still
has plastic wrap on face. Recently tuned and aligned by Yaesu factory.
Tech commented on it's great performance and cosmetic condition. Comes
with matching YC-601 digital display, still has "inspected by" tag on
it. Also cooling fan, all crystals (most were optional) including 11
meters in the Aux position, manual all papers and Astatic D 104 desk
mic. $500 plus shipping from Los Angeles area.
        Also have MFJ 949E combination tuner/watt/dummy load/swr meter.
I month old, in box with manual and warranty. $100 plus shipping.

55 Foot, 3 Section Heavy Duty Galvanized Crank-Up Antenna Tower.
Cable fairly new but pulleys probably need replacing. Minor surface
rust only at base. Purchased used last year but never put up. Tower
is located in Cape Coral Florida which is on the SW Coast. This tower
is approx 24' long in it's down position and weighs about 250-300
pounds. First $150.00 CASHtakes it away. Don't miss this one.
Please e-mail me with any questions you might have about this tower.

mrymer@peganet.com

Thanks,
Mike

The only difference I believe, is the channel spacing, US is 25Khz, and UK
is 12.5Khz. I know that my work mate has bought a new Kenwood unit from a
US base in England and it has facilities to change the spacing.

Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating.
A high quality picture is available in TIF format
on request. The unit can be viewed with Paint
Brush Pro. A full spec sheet is also available on
request.

Hi There,

Thanks for reading this message.
I need some info on the component layout and
values on the Antenna Input and Duplex Input
module.

Someone has keyed into both ports and I cannot
read the values on the burnt components.

PLEASE let me know what values and positions.

THANKS in advance !!!!!

I am looking for a tunable C-Band, 5845-6425MHz, upconverter with a
70 and 140MHz IF.
The catch is that it must be small, not the standard 19 inch rack mount
unit. This unit must be COTS as there is no allocation for R&D or

modification.
Any Ideas?

Hi Rob;
I would suggest you call Hewlett-Packard Technical Support Center at
1-800-698-0061 (press 3 at the menu) and as for technical support on
the 8920. They can probably help you find the right components.
Good Luck ;>

The bill is very specific in that it limits regulation to 24-35 mhz
but do not take my word fort, you can look it up at THomas, the
congressional we site which has the entire text.

Have a look at the one used in the "PROGENY" sng
digital unit marketed both by Satellite Transmission
Systems and Harris.

Neat little AM radio that is also a two channel crystal scanner.Can be
set so scanner interrupts the AM receiver or just use the scanner.Plays &
looks great,battery operation but also have original power cube.$23.money
order shipped.

I'm not happy with the pending garbage legislation either, but there have
been state and local laws that can be applied to the real junkpile CBers!
"Interfering with Public Safety Commmunications" has been used to get some
real bad mobile linears nailed and nuked !! (2KW+ bad alternator+ cheezy
antennna make highly detectable jammmers......)

|I hope you don't really think that any laws could stop the millions of
|CB'rs from using their CBs!! They allready use high power amplifiers
|that are allready illegal, why would any other law stop them?! How
|would they even KNOW about any new laws, as the typical CB'r isn't
|really into that kind of thing.

FS: Grundig YB400. Less than 1 year old, and used for less than five hours.   It works perfectly. I just haven't had time to listen to it, and the radio has been in storage for the last 10 months. Radio is in like new condition, and is in factory box, with original carrying case, retractable antennae, and manuals. Asking $140 plus $6 shipping (shipping will probably be higher if going outside U.S.). Payment by money order will ensure shipment the same day that shipment is received, otherwise shipment will be held till check clears.

Please reply to downeycj@tvratings.com.

Cliff Downey

Instead of reposting, the original post in this threaf post of why
don't you take a few minutes and read the bill?

The first song played when they switched formats was by Nine Inch
Nails. It has the immortal (immoral?) lyrics, "I want to **** you like
an animal". Quite an improvement over over the old WQRS wouldn't
you say. God, the crap they play now would have been investigated
by Congress 20 years ago. At least we have CBE at 89.9 for now.

THE ROGER HEDGECOCK SHOW

SOUTHERN CALIFORNIA'S COMMUNITY FORUM
MONDAY NOVEMBER 24TH, 1997
NEWSRADIO 600 KOGO (12:20 - 4:00PM)
SAN DIEGO, CALIFORNIA (HOMETOWN OF THE RADIO MAYOR)

TO BE USED FOR "ENTERTAINMENT," PURPOSES ONLY!!!
(forgit that!!)

WON'T DWELL too much on the headline..and by now one woulda thunk that zero folks in the population are unable to tell the difference between real talkradio and entertainment radio..but then..So, for the record only..since this tome goes to the "choir," and for our audience the info doesn't need repeating..The ROGER HEDGECOCK SHOW Community Forum is entertaining only if you are a glutton for Pepto Bismol..only if you place no value on your well being and listen while un-seat-belted...

If entertainment is revealing information that mainstream media don't understand or want to reveal..if entertainment is working your butt off to get Congress to pass a balanced budget (like work in the real sense..travel to D.C. at your own expense to sweathog thru the corridors and arm twist for votes)..if entertainment is driving your car to the border with 15-hundred of the "entertained," to turn headlines on at night so our Border Patrol Agents are safe..if entertainment is providing bonafide Community Forum's (live townhall meetings) to help resolve a teachers strike, discourse on the Chargers deal or debate the demerits of human quotas..Okay..we'll stop here..

And we will admit that we laugh a lot on ROGER'S show..mostly to keep from crying over the latest bungle by city, county, state, fed etc bureaucrats who have either opted to steal more of our money or have mis-spent what they have already stolen...If this stuff is amusing to you..you must work for the gummint!!..... THIS AIN'T JUST TALKRADIO

BEFORE WE GET TO this week's layout..let's briefly re-address the story that broke (talkshow-wise) on ROGER'S show last week..the DNC loot for Arlington burial..Newstypes are not off the hook..they need to follow ROGER'S lead and do some digging..digging from this end revealed on the air last week that Larry Lawrence ended up in Arlington because he gave a ton of money (200-thousand?) to da democrats. Yea he was tossed off a Merchant Marine ship during WWII and yes he was Ambassador to Switzerland..the former incident gained Lawrence a Purple Heart..not to demean that medal by any means but it ain't qualification for entree at Arlington.. Millions of our warriors have "earned," the Purple Heart and are not buried at Arlington..Face it full on.. Lawrence is entombed at Arlington cause he gave a lot of money..His ambassadorship was due to his contributions not because he was some kinda world diplomat..it was a cushy reward for financial /political service..that reward then (gimme a break) led to the additional reward of being buried at Arlington. (hey this guy opposed the efforts of our guys/gals in Vietnam). We've put the Larry Lawrence case to rest (allegations justified)..now let's see media probe the others!!

THIS WEEK..TODAY - Live from Mission Valley..ROGER helps pal Sammi open

his newest Sammy's California Woodfired Pizza outlet..1620 Camino de la Reina..between Mission Center Road and Camino del Este. FREE PIZZA, surprises..Meet Denish D'Souza in person (author of "Ronald Reagan: How an Ordinary Man Became an Extraordinary Leader.")..also meet Tony Berti and Greg Engel..Charger's Tackle and Center respectively..and their wifes..

TOMORROW - Nuther local guy makes good (ROGER'S show a mega booster of small biz and individual do-it-tivity)..This time a product called "Coup-O-Dex." You've seen it on QVC...

WEDNESDAY..5 Things the media keeps forgetting(?) to tell you..Pink Liquid OD alert on this one!!..and an update on Alternative Medicine..this time the focus on heart disease..you'll want this book!!

THURSDAY - HAPPY THANKSGIVING..best of ROGER..reprise of his live remote as men and women from Alpha Project destroy a downtown crack house..

FRIDAY - BEST OF ROGER ..encore of our live remote in Las Vegas..This show likely go make you wanna visit the RIO CASINO AND RESORT!!

THE WEEK AFTER..ROGER broadcasts live from Washington D.C. on December 1 & 2nd..live from the first ever Online Conference on the internet and our kids. This pair of shows will launch a major campaign for the new year..supported by a series of live internet seminars across Southern California to help parents, educators, policy makers and kids benefit from the vast goldmine of the world wide web without exposure to chat room perverts, porn pages and online stalking. More details to come..D.C. Conference is hot..Newt, Reno, Gore, Disney, AOL, U-S Ed Secretary & more will be involved and on the air with ROGER.(nuther must listen/record shows)

TIDBITS...Things so bad for Chargers and Cowboys that Valentine and Jim Charvat have taken to betting which team will lose "worse" on any given Sunday..

NEW E-MAILERS added this trip..you get on cause you dropped us an e-mail note..you get off just as easy (if you'd like)...

BOOKMARK THESE!! KIDS ON LINE The site where you'll find info about the first ever Safe Kids on the Net conference that ROGER will broadcast from December 1 and 2th.. also for newsies.. FBI or DEA or IRS All of these sites available via a grant from private foundation to the S.I. Newhouse School of Public Communications at Syracuse University...

Seems to me this post was a "useless bit of information"

> Post a question or an answer!

my trivia question: what does this have to with rec.nude????

>Visit my trivia website--

or:

    http://cascoly.com/trivia.htm   for online and shareware trivia games:

Civil War Trivia
Did Antietam come before or after Gettysburg? In what state did the battle of Manassas take place? In which battle did 800 Cherokees take part? Civil War Trivia -- challenging for any ability or knowledge level. Test your knowledge of battles and leaders.

Shakespeare Trivia
 In which play does Iago appear? What's the first line of Hamlet? Who speaks last in King Lear? Where does Merchant of Venice take place? (Ok, the last may be too easy, but how many of the others did you get?) Shakespeare Trivia -- challenging for any ability or knowledge level. 37 plays, over 1200 characters, over 400 scenes, and 500 individual quotes. Test your knowledge of the bard with a dozen different types of questions.

GLOBAL CHALLENGE: What's the highest point in Peru? What countries border Azerbaijan? Global Challenge tests knowledge of geographical facts for 250 countries, in 12 categories.
Cascoly's unique system lets you decide how difficult to make the game. With over a trillion possible questions, you'll never see 2 identical questions. The game adjusts to become tougher the more you

play. You can also select particular countries to be included.

CHRONOS HISTORY TRIVIA GAME: Who was born first, Michelangelo or
Cortez? What countries were involved in the Opium War? Was Nietzche
a famous Danish Composer? A dozen different categories, and hundreds
of people and events, -- the game will never be the same twice.
Great for history buffs, teachers, students and anyone else interested
in testing their knowledge of world events and cultures.

FBI in the UK? I think not. However pyramid schemes (this is classed as
a pyramid scheme) are illegal in the UK. Schemes like this are only
legal if you are selling goods (network selling e.g. AMWAY). Schemes
that just involve the flow of money are not acceptable. By posting this
scheme (which I have snipped off to try and discourage people from
following it) you would be committing an offence if you lived in the
U.K. If anyone wants to see a tragic result of a pyramid scheme take a
look at Albania. You are bound to lose money in such a scheme, that is
except if you are right at the top of the pyramid.

Please re-read what I said. I said "If you weren't in the UK." In other
words, if you (the spammer) were in the US I WOULD send the spam to the
FBI.

No charge for the "English" lesson.   :-)

Well, I have written a big text file that features millions of
frequencies! Some include The Secret Service, CIA, FBI, Air Force One,
Cordless frequencies, how to find out if you have been "bugged", and
more! Please EMAIL me for it.

Hi !

I'm pat. I practice the skateboard too for eight years and i play the
bass and snowboard and make movies and animations.

Haven't you heard about the latest sports craze? It's called:
"cross-posting!"

FACE="Colonna MT">EZ
SiteMaker</FONT>)</P>
<P ALIGN="JUSTIFY">
<FONT SIZE=2>Earnings from your 3rd Level: 12 X 12 X 12 X $ .50/mo.
</FONT>= <FONT SIZE=4 COLOR=#FF0000>$144/mo</FONT><FONT SIZE=4>.
(Starting to Get the Point?)</P> </FONT>
<P ALIGN="JUSTIFY">
<FONT SIZE=2>Earnings from your 4th Level: 12 X 12 X 12 X 12 X
$ .50/mo. =</FONT><FONT SIZE=2 COLOR=#FF0000> </FONT><FONT SIZE=5
COLOR=#FF0000>$1,728/mo.</FONT><FONT SIZE=5>
(Your <U><I>House</I></U> Payments?)</P> </FONT>
<P ALIGN="JUSTIFY">
<FONT SIZE=2>Earnings from your 5th Level: 12 X 12 X 12 X 12 X
12 X $.50/mo.= </FONT><B><FONT SIZE=6 COLOR=#FF0000>More Than
$20,000/mo.</P><B> </B></FONT></B>
<P ALIGN="CENTER">
<CENTER>We don't need to go on ... you calculate the income you
can earn from Levels 6 &amp;amp; 7!!!</P> </CENTER>
<P ALIGN="CENTER">
<CENTER><FONT SIZE=4 COLOR=#FF0000>That's a combined annualized
potential exceeding $250,000 per year!!!</P> </FONT></CENTER>
<P ALIGN="JUSTIFY">
<FONT SIZE=2> </FONT>By now you certainly get the point we
are attempting to illustrate. Not every Independent Representative
will earn the above income potential, as not everyone will take
the time to find at least one (1) new Customer or Independent
Representative/Customer each month. And, some Independent Representatives
will not always use the <B><FONT COLOR=#FF0000>1st Family</FONT></B>
products. Also, the above example includes only one (1) service
usage per Customer, so the earnings potential could potentially
be up to two or three times the above stated amount if everyone
used all three products currently offered. Therefore, everyone
should set their own personal goals, and the company and your
upline sponsors will try to assist you in marketing tips and other
timely information to help you achieve your objective.</P>
<P ALIGN="JUSTIFY">
 <U><I><B><FONT SIZE=4 COLOR=#FF0000>Timing is important</FONT></B></I></
U><FONT COLOR=#FF0000>.
$19.95 per month for Internet Access with <B>NO</B> activation
or start-up fee is very competitive. The PSINet service being
resold by <B>1st Family</B> is high quality dial-up accessibility,
plus they offer 24 hour per day technical support. Several smaller
ISPs have difficulty handling the traffic at peak times when lines
are crowded. This is not limited to local ISPs. Some major players
like AOL have many unhappy campers due to inaccessibility. PSINet
guarantees connectivity! Others charge a flat monthly fee, plus
an hourly rate for excess usage. No surprises with <B>1st Family</B>!</P></FONT>
<P ALIGN="JUSTIFY">
<FONT COLOR=#FF0000> </FONT>With the<FONT COLOR=#FF0000>
```

<B>1st Family</B> </FONT>service, you don't have to worry. PSINet
uses state-of-the-art connectivity, and you are given unlimited
dial-up access. (See list below for dial-up POP sites in the U.S.,
Canada, Japan and as others are added in Europe and Asia).</P>
<P ALIGN="JUSTIFY">
 <FONT COLOR=#FF0000>Remember that a very large majority
of new Internet users do not have HTML, FTP or Telnet knowledge,
or Web Page design experience. This presents millions of prospects
for the </FONT><FONT SIZE=4 COLOR=#0000FF FACE="Colonna MT">EZ

ISOLATION AMPLIFIERS FOR SALE

Suitable for applications up to 20Khz, excellent isolation from source
(input).
These are made by Intronics, Model 296. The specs, etc., may be
viewed at the Intronics website at:

http://www.intronicspower.com/

Click on "standard products", and find the Model 296.

The price for these NEW was $159.00.
I have over 20 of these, used but fine, for $20.00 each, or
$250.00 for all of them.

I have 2 two-way radio's for sale:

1st:

Uniden SPS920TS (900 MHz trunked)

This is a handheld trunked radio. I have no charger for this radio, just the radio, battery, & antenna   ($250.00)

2nd:

Yaesu FTH2070 (dual band (150-170 & 450-470) 32 channel)

This includes the radio, 4 batteries, antenna, drop-in rapid charger, speaker-michrophone. ($800.00)   I will program this radio once (for free) prior to shipment with any combination of VHF/UHF frequencies desired. After this, $25.00 programming charge.

Please Email me at: KennethKJones@sprintmail.com

These radio's are in addition to shipping (I will ship COD).

I have two things that I am looking for:

1. min 2.5W output 2M/70cm dual band hand held (under $250.   newer is better. must be functioning properly.)   the information for 70cm only hand held is also welcome.

2. Packet Terminal Controller (for Pentium IBM Compatible PC. 1200bps

minimum;   perferbly 2400bps or more.   under $100)

Also I would like to know a good store for hand helds or packet
terminals.

Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating.
A high quality picture is available in TIF format
on request. The unit can be viewed with Paint
Brush Pro. A full spec sheet is also available on
request.

For further info E-mail RTE
at rte@global.co.za
or call (011) 882-9182
or Fax 882-1122
Johannesburg.

RTE also buys, supplies, rents and repairs Comms.
Monitors plus all sorts of Test Equipment.

I am a member of AMSAT and never understood why a launch delay costs
us more money. Do we have to pay more for storage? If P3D is completed
why does it cost more to launch in Sept vs June?

 Maybe because they tinker with it until launch time? Find last minute changes? As always, EVERYONE wants MORE money. Like we have a tree full of it in the backyard....

What are you guys complaining about? If we have more time till the launch date then we should take that opportunity to make the sat more efficient, robust and test it till it is flawless. More work = more money. If we can't get more money then I guess we could always store it in a ham's garage for free till the launch. Does it matter if AMSAT is broke? Amateurs have always managed to build things on a flee's budjet, good on them :)

Paul, VK2THN.

I have no problem with tinkering and changing things if it will help. It's the money thing I'm talking about. Change for the sake of change is rediculous though. If it isn't broke leave it alone is how I feel. It isn't our fault the rocket isn't going up on time, why should we pay for storage (if that's the reason). More work=more money as far as the sat is concerned is a bogus excuse. Guess the volunteerizm isn't there....I have no problem with asking for donations by the way.

Newsgroups: rec.radio,rec.radio.amateur.digital,rec.radio.amateur.dx

KNEE DEEP IN MP3s
==========

Available here for the first time: a full ten hours of insanely great music on one CD for only $16! Thanks to the mind-bending compression of MP3 technology, we can offer you this disc, Knee Deep in MP3s for a limited time.

What is an MP3?

==========
Well, its a digital audio compression format, similar to the one used on music CDs. Instead of using a whopping 8mb to store one minute of music (like CDs do), MP3 compression allows for ratios around 1mb per minute. That means on a single CD, you can store over ten hours of digital quality music! And that's exactly what Wide Awake has done.

Needless to say, the record companies and major labels do not want you to know about this. It could ruin their big push for DVD in the next six months (or whenever they get off their ass), not to mention the fact that it could spawn rampant trading and copying of music, just as software is traded and copied today.

About the disc
==========
It is available in either a Mac or Windows format (must specify)

Mac Requires	Windows Requires
PowerPC	Pentium
System OS 7.5 or greater	Windows 32-bit (95 or NT)
2x CD-ROM drive	2X CD-ROM drive
	Sound Card

It is optional that your computer be hooked up to an external stereo system, although you will get much more enjoyment out of the files if heard through decent speakers, etc.

All the required software to play the MP3 files have been graciously included on the disc, so all you have to do is pop it in your CD-ROM drive, drag-and-drop a sound file or two, and let it rip! Note : this is a DATA CD, and will NOT play on your normal CD player.

The Music
=========
The final choice of these five categories left us arguing and still unsure. We hope these will work for you.

ALTERNATIVE
Since this rock categorization has recently become mainstream, we will label this the mainstream area. Janes's Addiction, Iggy Pop, Marilyn Manson, NIN, Smashing Pumpkins, No Doubt, Squirrel Nut Zippers, Duran Duran, U2, White Zombie, Garbage, Jewel, Radiohead, B-52s, Cardigans, Enigma, Fiona Apple. And many more.

CLASSICS/RETRO
All your old favorites. Beatles, Grateful Dead, Velvet Underground, Eurythmics, Devo, Stray Cats, Ramones. Plenty to revive your old habits.

ELECTRONIC/ DANCE
Longer and more intelligent dance songs from Orbital, Moby, Fluke, Aphex Twin, Chemical Bros, Dune, The Orb, Yello and a slew of others.

RHYTHM
This split from the Alternative section into its own category. Find Ska, Reggae, and Rap here. Coolio, Jamouriqoai, Sublime, Beastie Boys, Beck, Bob Marley.

MOVIES/TV
It does wonders for your mood to hear the theme to an old TV show. Or a movie's distinctive soundtrack. Find them here. Inspector Gadget, Mission Impossible, Dukes of Hazzard, Star Wars, Blade Runner, The Muppet Show, or the A-Team.

Ordering Info
==========
Call Wide Awake Enterprises toll free at 1-888-553-0246 and leave a message including the following information:
- Name
- Phone Number (with area code)
- Email address
- Product you want (Knee Deep)
- Any other pertinent facts

One of the Wide Awake operators will get back to you and charge the $16 fee (no shipping or handling!) to your Mastercard or Visa. The disc will be shipped to your door the next day.

Look for more compilations in the future, as more and more great artists are added to our collection!

If you have further questions, feel free to email prophet@bigfoot.com.

sqnt-public.forsale,rec.radio.shortwave,rec.radio.amateur.equipment,

Hello,
I have a ten meter band ham radio for sale. It is a mobile (CAR) radio
which can be used at home also. I have a power supply/converter

included in the deal. This converter can be used to setup the radio at home. The manufacture of both the radio and the power supply/converter is Radio Shack. I am asking $225.00 for the whole thing. If you are in the Miami, Florida area and are interested or you wish to discuss the shipping arrangements, please contact me at skyfire@bellsouth.net

To reply, remove the "**" from my e-mail address.

For sale only:

Pro-Audio recording gear:
British-made "ACES"-brand 24-track 2" recorder with remote, 15/30 ips with vari-speed, sold new for $19,000.00.   Also ACES 32-input in-line mixer, 24 groups, 5-band switchable EQ, 5 sends per channel, extensive routing options, patchbay, etc., sold new for $13,500.00. All manuals, wiring harnesses, and lots of spare parts included. Both units are one-owner. I'll sell both for $10,000.00.

For sale or trade:

PATCH BAYS:
19" rack-mount patch-bays, with heavy-duty long-frame mil-spec Switchcraft/ADC 1/4" jacks. Front panel is black phenolic with designation strips, attached to a metal reinforcing frame. Jacks are switching type, and may be wired in a variety of ways such as normaled, semi-normaled, etc. They are wired to a "punch-block" which is mounted on the back of the frame, and connections may be made to the punch-block, or directly to the jacks. I have:
Quantity: 3   Number of jacks: 48   Approx. list price: $150.00
I sell these for $40.00
Quantity: 4   Number of jacks: 72 Approx. list price: $60.00
I sell these for $60.00
Quantity: 3   Number of jacks: 96 Approx. list price: $250.00
I sell these for $80.00

POWER SUPPLIES
These are "Sola" brand 117VAC in, 15VDC out bi-polar power supplies, highly filtered and regulated, PC-board mount (but easily adapted), and were used in medical heart-monitoring equipment. You can find them listed in the Allied Electronics catalog. I have:
Quantity: 4   SOLA#84-15-2135   Rated at: 350MA
Allied price: $220.00
I'd like $20.00 each
Quantity: 7   SOLA#84-15-2120   Rated at: 200MA
Allied price: $154.00
I'd like $15.00 each

ISOLATION AMPLIFIERS

Suitable for applications up to 20Khz, excellent isolation from source (input). You get isolated/amplified signal input/output, and isolated 15VDC bi-polar in/out.
These are made by Intronics, Model 296. The specs, etc., may be viewed at the Intronics website at:
http://www.intronicspower.com/
Click on "standard products", and find the Model 296.
The price for these NEW was $159.00.
I have over 20 of these, used but fine, for $20.00 each, or $250.00 for all of them.

I also have 2 Tektronix Model 620 X-Y display monitors, with 10X12 cm screens, suitable for analog display data such as ultrasonic detection systems, volume & vibration analysis, auger probes, and biophysical systems as well as computer and data transmission systems. I don't know what they cost new, but they are real nice, and I'd let them go cheap.

Make an offer--I'll horse trade!!

On the beach? Tired of the sand?

Jobs are waiting for you. Good jobs. Real jobs with real stations.
Come on over and have a look.

Or maybe you are seeking that special talent. From GM to board-op
we can find your (wo)man. Airwaves Media's great new Employment
Connection is there for you, 24/7 and gratis! Glad to help.

Just point your Navigator or Explorer to http;//www,airwaves.com/job.html
and read the introduction. Then click and view job offers and
positions sought from miles around. All email and web addresses are
hyperlinks so visiting the page or dropping a quick email is simple.

If you don't see what you need online, no problem. Just click and
post your own help wanted or position wanted ad. We'll add it to the
database for you. Watch your prospects improve.

So what are ya waiting for? C'mon down...

>dpoynter@avalon.nf.ca

Hi Don,

The simple antenna solution is to hang as much wire in the sky as possible. Make it easy on yourself at first, and do it in stages until you see no further improvment at the lowest frequency you are interested in.

There is a more serious issue to be taken care of before the antenna. If this rig has not been turned on in a number of years, there may be a fire hazard. The filter caps in the power supply are undoubtedly getting on, and these items do not last forever. Flipping on the radio may give you a hiss and several stations, and give the impression of being in a working state. This may be a false security. There may also be no problem. The compelling evidence will be a small explosion (fully contained within the radio) and smoke and/or flames afterward if not unplugged.

The technical solution is to plug the radio into a variac and sloooowly raise the variac output over a period of hours (or days) from 0 to 115VAC. This will allow the old electrolytics to re-form their chemistry (if you are lucky) and let life continue as though no years have passed. Many of these radios work quite well after this slow wakeup call. Simple evidence of how robust they are is in the amount of 60/120 Hz hum you hear with everything turned all the way down. This can vary from zilch to Mt. Saint Helens rumble. Anything above 3 on the richter scale suggests replacement of these power components ($20 for parts (before markup) and $100 labor).

73's and happy DX'ing

Try the rec.radio.amateur.boatanchors newsgroup. (boatanchor is the
affectionate name given to old, heavy tube radios.) There are a lot of
enthusiasts of old radios on that group. Someone there can give you
info on your X-371.

Agreed.....

But runing up with a variac also reduces the fil voltage...so while it

puts less B+ on the caps it also reduces tube life...they dont like
being run at a lower voltage and develop "Cathode Scaling" (junk
deposited on the cathode that requires a period of OVERvoltage to
remove).

I always break the center tap of the B+ transformer and insert a series
of resistors, starting with 1Meg for a day, then 1/2 Meg..and so on thru
a few K until the Caps are fully reformed....

Of course if the poster of the origional int a teccie he could be
(un)pleasently shocked during the process!

This handbook is probably a collectors item. Johnansen is the
original editor of the World Radio and TV Handbook (WRTH) that
we buy every year. This year being the 50th year of the WRTH's
publication, they had a historical article about Johnansen and
his Handbook.

Enjoy!

Hi Rex,

The effect on the cathode you are speaking of is from long-term variations of nominal operating voltage. As to the life expectancy, it is quite the opposite. The age of a filament varies by the fourth power of the current applied to it. A 5% reduction of current will lead to a 22% increase of life. However, this is not a practical application for us given such life considering measures also have an impact on the cathode's ability to boil electrons off into the plate current. The cathode scaling you speak of is oxidation and a sign of the cathode being cool. I've commonly "descaled" cathodes by applying 1-2 Kv between the cathode and the first grid for 10-20 seconds, and minutes for a tough dog. These measures are of course last resort attempts not ongoing maintenance items.

Another posting alerted our friend to the ground hazard that may exist. This is a very real threat (it is a 70 V problem derived from the early practice of tying both side of AC mains to common through noise capacitors). When I was in the Navy, I was in charge of a TV/Radio repair project the Navy put on for S.F. charities. We took in 300 TVs and 200 Radios and turned out 125 TVs and 180 Radios in two months with a budget of $50. This was, for my students and staff, the University of Hard Knocks advanced studies program. Real electronics, not blackboard electronics.

One student learned about this hazard the hard way. He assumed that because our ground buss was so long, that it would support TV signals by merely attaching the antenna lines to it. I commended my student for his intuition as he plugged in the TV. We watched as the insulation on the wire drooped off like snow from a telephone line; smoke followed, and then a cheery red glow. It was very instructive (and one reason why I taught my men to keep one hand in their pocket, or behind their back; at sea, everything is at ground potential except you, the load).

My chart shows to start with a 40 inch rod and using an swr meter trim
about 1/4 inch at a time to get the match.

46.0 mhz = 40 inch rod 101.60 cm
48.0 mhz = 37 inch rod   93.97 cm

I have the following cable assemblies for sale. All have BNC
connectors on both ends. Cable is Belden 9248 which is an RG-6/U type
coax with a dual shield and an impedance of about 75 ohms. These appear
to be pulls from a video or Local Area Network and seem to be in very
good physical condition. Cables are DC tested but not RF tested. Would
make a good VHF/UHF antenna lead in. Belden 9248 specs. are about 5 db
loss at 450 mhz per 100 ft., I think (may want to check yourself and
confirm).

   Prices are for pick-up/delivery in the Greater Sacramento area. Add
UPS from zip 95608 for other areas.

Qnty.	Length	Price
1	53 ft.	$12.00
1	48 ft.	$10.00
1	45 ft.	$10.00
1	55 ft.	$12.00
1	40ft.	$ 8.00

Don't be shy with offers. E-mail direct at wade@mpu.com for more info

Don - This sounds like an interesting radio. It shouldn't take much of an antenna for you to get European stations. You could get a 20 foot (7 meters) length of any kind of wire and hook it on to the antenna terminal(s) and see what happens. It would be helpful to know what kind of terminals are on the back of the radio. Also, when you start using it for more demanding applications (like SW), you might find that some of the tubes are too deteriorated to perform well. They may need testing and replacement.

What does the "International General Electric Radio Handbook" say about antennas? Is this a manual for this radio, or a general short wave manual?

Cheers

Dave, K9SW

Followup to the above ... the recommended method of cutting a Larsen (or other) rod is to use a pair of bolt-cutters with hardened steel cutters (Larsen has a special tool that they will sell you that is similar) ... lacking that, notch the rod with a triangular file (or the corner of a rectangular file) about half-way through, and "snap" the rod ... if you take your common wire-cutters and try to cut the rod, you will end up with a nice indentation in your wire cutters, and will have modified them to be nice wire strippers (for all those who are always looking for "modifications" to things!).

Larsen (and most other antenna manufacturers) use a hard stainless alloy for their whips, with some sort of more conductive plating over that (creating what Larsen calls their "Kulrod TM".

73 to all!   (And thanks to Charles for his post!)

NEW VERSION ! 1997 (Legal Questions Addressed!)

(Excerpt From Bob Novak Who Started This New Version)

In late October of 1996, I saw an article in an internet newsgroup telling me that I could make $50,000 within a month for an investment of only $5. I thought, "OH YAH!! I'VE GOT A BRIDGE I'LL SELL YOU TOO!!" It sounded like all the rest of the "get rich quick" schemes and scams I've seen over the past 40 years or so.

I spoke to my attorney, a few friends, and family about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. After rejecting the idea at first, it kind of played on my mind and I thought, "what if it really worked?" I realized all I had to lose was $5.00, I usually blow that much on the lottery every week anyway, so I figured what the heck, and decided to give it a shot.

Within two weeks I began receiving money in the mail! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had received a total of $46,812.00! It came from everywhere in the world." Lately, I've doubled my efforts and the money is rolling in even faster. I would tell you how much but then the IRS would know also, let's just say it's a VERY comfortable living. Now, I am really going to work! If I can make as much as I have, and still am, on a lousy $5.00 investment, why not double it and make the "Big Bucks" twice as fast? Anybody can afford to gamble $10.00 on a chance to make $100,000.00 or more in a month, especially when the business has already proven itself.

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $10, and you receive a return on your investment. So does the next investor. THIS IS NOT ILLEGAL, THIS IS NOT A CHAIN LETTER, THIS IS PERFECTLY LEGITIMATE. (See additional legal details below.)

THE PROCEEDURE IS SIMPLE:

1) Invest your $10 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending two dollars to someone; you're paying for a legitimate service.) Fold two $1 U.S. Treasury bills, money order, or bank note inside each piece of paper, and mail them by standard U. S. Mail to the following five addresses:

1. David Wiseman
   P. O. Box 1648
   Clarenville, NF A0E 1J0
   Canada

2. Sean Bennett
   #605 - 9825 103 St
   Edmonton, AB T5K 2M3
   Canada

3. Gregory Pang
   Box 60367
   U of A postal outlet
   Edmonton, AB T6G 2S6
   Canada

4. Pawel Koper
   #4-7120 Pandora St.
   Burnaby, BC
   V5A 1B7
   Canada

5. Thomas Walter
   Parsbergstr. 14
   82110 Germering
   Germany

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. You can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 22,000, so it shouldn't be hard to find that many. Remember, there are no "Free Lunches" in this world so the harder you work the more money you will make.

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a pseudonym, but make sure your address is correct.

LEGAL ? ? ?

People have asked me if this is really legal. It is! You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online businesses and methods of generating income at home.

Remember - people send you a small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you.

NOW HERE IS WHY THE SYSTEM WORKS:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those "Make Money Fast" posts more and more. All that growth means profits for everyone who participates. There are no losers.

Of every 200 posts I made, I received 5 responses. That probably doesn't seem like much. You make $10 for every 200 posts with your name at #5.

Each person who sent you $2 now also makes 200 additional postings with your name at #4. i.e.. 1000 postings. On average therefore, 50 people will send you $2 with your name at #4. $100.00.

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$1,000.00. They make 200 postings each with your name at #2=100,000 postings=5000 return at $2 each=$10,000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $100,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Total income in one cycle = $100,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $10, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $10, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $10 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?" Big Deal, so you lose $10.00 but what are the chances of that happening? SINCE THIS IS A BRAND NEW PROGRAM AS OF JANUARY 1, 1997, YOU'RE IN ON THE GROUND FLOOR!

There are millions of internet users, and millions of new net surfers every month.

Remember- read the instructions carefully, and play fairly. THAT'S the only way this will work. Get a printout

so you can refer back to this article easily.

Keep a list of everyone that sends you money, keep good books, pay your taxes, and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER-HONESTY IS THE BEST POLICY. WHAT ARE 10 DOLLARS TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! (We will monitor the program and if we find you have cheated by not sending your money to your five recipients, we will just dump you out of the system). This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50? or $5,000? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY!!!

Extra section:
HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

The Fastest Way To Post To a Newsletter:

Simply highlight and COPY (Ctrl-C for copy) the text this e-mail message and PASTE it into a text editor such as Notepad and SAVE it (as a .txt file).

After you have made the necessary changes that are outlined above, Simply COPY and PASTE the text into the message section of the message composition window and to be posted to the Newsgroup and post it!

If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype

(only once)
THIS whole article WORD FOR WORD, except insert your name at #5, and remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.

Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

NOTE: If you don't want to type in the whole article by hand, AND you know how to use a plain text editor (like Notepad), you can edit the file ahead of time, then attach it as shown in step 6.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc:.

6) Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message. Click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click on the file, and then click 'OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

Note: If you don't want to type in the whole article and you know how to use a plain text editor (Notepad), you can edit the file ahead of time, then attach it.

QUICK TIP!

You can post this message to many newsgroups at a time by simply selecting a newsgroup near the top of the screen, hold down the SHIFT key, and then select a newsgroup near the botton of the screen. All of the newsgroup in-between will also be selected.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, highlight this article. then press the "crtl" key and the "c" key at the same time to copy this article. then print this article for your records, to have the names of those you will be sending $1 bills to.

2) Go to the news groups and press "post an article". A

window will open. Type in your headline in the subject area and then click in the large window below. Press "crtl" and then "v" and the article will be placed in the window.

If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new newsgroup all you have to repeat is "ctrl" and "v" and press post.

3) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, or more.

You see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it.)

REMEMBER 200 IS THE MINIMUM. The more you post the more money you will receive. AND THAT'S ALL THERE IS TO IT!!!

DON'T LET THIS ONCE IN A LIFETIME OPPORTUNITY PASS YOU BY!

The following equipment is located in Sacramento, CA zip 95827.

1. Tektronix 422 Scope, no probes, works great. $125 plus UPS on approximately 25 lbs.

2. Tektronix 549 storage scope, with 1A2 plug in, good condition. $135 plus UPS on approximately 100 lbs.

3. HP333A distortion analyzer, excellent electrical and cosmetic condition with power cord and clear copy of manual. $250 plus UPS on approximately 20 lbs.

4. HP 4204A 10 hz to 1Mhz, low distortion audio signal generator, digital selection of frequency from 1 hz in lower range +/1 delta, (10 hz +/1 10 hz delta in upper ranges). Precision output attenuator and level meter, -60 to +20 dbm/600 ohm, distortion at 0 dbm out measure less than 0.13 percent on HP 333A. Frequency stability excellent and settable via front panel rotary switches, with power cord, no documents. $300 plus UPS on approximately 20 lbs.

5. Rycom, Selective volt meter, model 2174A, 1 kHz, 420 kHz, band widths of 50 hz, 3 kHz, 10 kHz, -70 dbm full scale to +30 dbm full scale. $125 plus UPS on approximatley 20 lbs

6. Two HP3400A RMS meters with power cords and copies of documents. 1 unit in good shape, 2nd unit ok cosmetically, needs repairs, but responds. $125 for both plus UPS on approximately 25 lbs.

7. HP 333A Distortion analyzer in nice condition, fully tested, copy of documents. $275 plus UPS on approximately 25 lbs.

8. HP 400L rms meter, excellent condition, $65 UPS prepaid conus.

Thanks for the read

GLOUCESTER AMATEUR RADIO & ELECTRONICS SOCIETY

GLOUCESTER - ENGLAND

If you live in or around Gloucester and are interested in electronics, robotics, microprocessors, computers or amateur radio our society could be for you!

We meet every Monday evening from 7-30 p.m. to 10 p.m. at Churchdown School, Winston Road, Churchdown, Gloucester and offer a varied programme for the electronics hobbiest.

If you'd like to know more why not come to our Open Evening on 10 March.

Further details about the Society can be found on our web pages at http://www.furcot.demon.co.uk/gares0.htm or by sending e-mail to gares@furcot.demon.co.uk

Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating.
A high quality picture is available in TIF format
on request. The unit can be viewed with Paint
Brush Pro. A full spec sheet is also available on
request.

For further info E-mail RTE
at   rte@global.co.za
or call (011) 882-9182
or Fax   882-1122
Johannesburg.

RTE also buys, supplies, rents and repairs Comms.
Monitors plus all sorts of Test Equipment.

GLOUCESTER AMATEUR RADIO & ELECTRONICS SOCIETY

GLOUCESTER ENGLAND

If you live in or around Gloucester and are interested in electronics, robotics, microprocessors, computers or amateur radio our society could be for you!

We meet every Monday evening at Churchdown School, Winston Road, Churchdown, Gloucester from 7-30 p.m. to 10-00 p.m. and offer a varied programme for the electronics hobbiest.

If you'd like to know more why not come to our Open Evening on Monday 10 March.

Other forthcoming events are:

7 April Construction Competition
5 May a presentation on NASA and space exploration
12 May a presentation on computers and communications
9 June a presentation on phase locked loops

Further details about the society can be found on our web pages at http://www.furcot.demon.co.uk/gares0.htm or by sending e-mail to gares@furcot.demon.co.uk

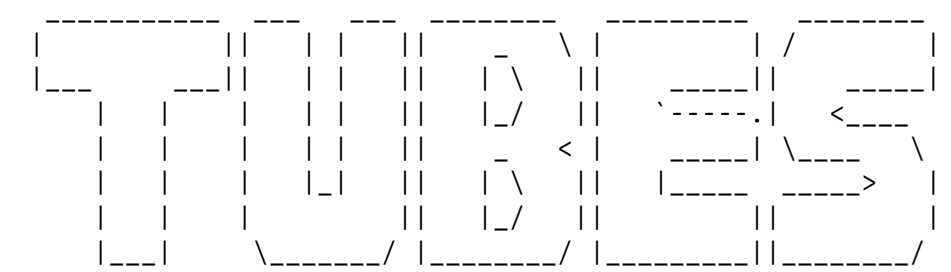
YES!!! WE HAVE



o Rare tubes
o Antique tubes
o Hard-to-get tubes
o Balloon
o Shouldered
o NOS in box or tested used

We will match or beat any advertised AES price on
two-digit
tube types! You save by buying in low Canadian
dollars!
Quantity discounts available!

If you've got an old attic treasure but just can't get
the
tubes, we can help!

For a list of types,
Visit our web page at:
http://vvv.com/~tommy/tubes.html

Or e-mail us - pacifictv@f26.n340.z1.fidonet.org

Or call us at +1 250 386 4283 9am to 5pm Pacific Time!

Terrapin Thursdays on deadradio.com. Starting this Thursday at 7:00
pm Central (give or take a few minutes), deadradio.com will be playing
live Dead shows in their entirety on their 24-hour radio station.
They won't reveal which show they'll play until the evening of the
show--so you don't know what to expect--kind of like a real show.
They promise they'll have a real live deadhead dj introducing the show
and reading email in between sets (when some of us may be off getting
a brew or grabbing a smoke). This might just be the next best thing
to being there.

THIS IS A MONEY MAKING SCHEME. I WANT TO TRY IT...IF YOU HAVE NEVER TRIED BEFORE THIS ONE IS DESIGNED FOR YOU!
Did you ever think, deep down, that this is illegal? If you no you will think it when the money starts coming in...trust me. Did you ever
think,
deep down, that people are so pissed off at seeing this crap that they
have no qualms about turning you into the authorities?

The Toast! wrote:

> white message box, click on your RIGHT mouse button   and click on
> paste. This will copy the entire message (If   your right mouse button
> is inactive you can simply use the   "Ctrl+V" keys or select "Paste"
> from the "Edit" menu.).   If after all that you still cann't edit the
> message, the   final choice is to simply re-type the message.
> However,   I'm sure you'll see that copying and pasting this article
> into a New News message is fairly simple and   straight-forward.   *
> Once you've made all of your changes to the article you will   want to
> save the article as a ".txt" file either on your   C: drive or A:
> drive. DO NOT SEND OR POST YOUR ARTICLE   UNTIL YOU'VE SAVED IT!
>
> OK. I assume you've now mailed your Five envelopes with the One
> Dollar bill and piece of paper requesting to be placed on the
> recipient's mailing list, you've removed the person in the #1 spot from
> the mailing list and placed your name at the bottom of the list,
> completed any editing you felt necessary to the text of this article,
> and saved the article as a ".txt" file. Let's now move on to STEP 3
> and get the message out so you can start harvesting the fruits of your
> labor.
>
> STEP THREE: Now it's time to post your article to any newsgroups of

> your choosing. I'm assuming you still have your revised article in
> front of you. Now the fun really begins. You will want to post your
> article to at least 200 Newsgroups. As I will explain below, posting
> to 200 Newsgroups, statistically ensures that you maximize the
> probability of achieving a return of at least $50,000 on your
> investment of $5. As you can see I've already posted to several
> Newsgroups, therefore all you have to do is click on the "Send" Icon
> and you will have made your first delivery. It shouldn't be but a week
> or two before you start seeing returns in the mail.
>
> HOW CAN I POST TO ALL 200 NEWSGROUPS AT ONCE? I thought you'ld ask
> that. Remember that we saved our article as a ".txt" file. Just
> follow these additional simple steps. First, open your Newsgroup
> window. By holding down the "Ctrl" key you can highlight all the
> Newsgroups to which you would like to post your article. Next, open up
> your "New News" window (remember in Netscape you merely need to click
> on the "To:News" icon. You should now see all of the selected
> Newsgroups. Next type your catchy message in the "Subject" box. Next,
> click on the "Attachment" button directly below the Subject title. The
> "Attachments" window will pop-up. Click on the "Attach File" button.
> You will then see the "Enter attach file" window. Find your file and
> click on the file name, then, click on "Open". This will return you to
> the attachment window. Click OK and your article will be compressed and
> ready for distribution once you "Send" the article. If you would like
> to test the delivery first, I would suggest that before you select the
> Newsgroups for mass distribution, you simply select the Newsgroup
> "alt.test" and deliver your message. You will then be able to go to
> this Newsgroup to review your article. If you're satisfied with the
> presentation and content of the article, just repeat the process
> outlined above to send a mass mailing to your selected 200 Newsgroups.
> REMEMBER 200 Newsgroups is the suggested minimum. However, you can
> post to as many as you would like.
>
> SO WHY SHOULD I GO THROUGH ALL OF THIS? PROVE TO ME WHY THE SYSTEM IS
> SUCCESSFUL AND WHY IT ACTUALLY WORKS? Well that's the same question I
> asked myself. If its that simple to make money, why isn't everyone
> doing it? Well as I told you before, take a look at a few of the
> newsgroups and you'll see that there really are a tremendous number of
> people actively participating. SO READ ON! THEN STOP SCREWING AROUND
> AND GET GOING SO YOU CAN JOIN IN ON THE FUN AND THE MONEY!!!!! The
> system works for the following key reasons. The Internet is growing at
> a phenomenal rate having already doubled since last year. With over 40
> million people, and growing, surfing the Internet, and an estimated
> 100,000 Newsgroup users participating in almost 20,000 Newsgroups (and
> that doesn't include those millions of Internet surfers looking for a
> reason like this to join in the excitement), the exposure to the mass
> market is incredible. And it is this exposure which drives the ability
> for this MailList venture to be successful.
>
> Let's look at the mathematical progression which ensures success in
> its most simplest form. Assume that out of your posting to 200
> Newsgroups, you received only 5 responses, a response rate of only
> 2.5%. However, you've just made your $5 investment back. The people

i dont know what the heck this has to do with baseball. this is a
baseball newsgroup isnt it ? isnt there a financial group to put this
dribble on ? I'm more worried how the Orioles are going to do without
a set 5th starter this season. keep this scam stuff off the baseball
newsgroup.

.shuttle

Amsat-NA is in need of donations to help complete and launch Phase 3D. Last report says we need to raise over $150,000. Launch date is only a few months away so we haven't much time. You're fooling yourselves if you believe that the money will magically appear come launch day or that someone else will donate the needed funds. I don't want to see Amsat bankrupt itself in the name of Phase 3D.

If 150 of us will call Martha at (301) 589-6062 and each donate $1,000 then we can be assured Phase 3D will be riding on the ESA rocket and not a cement weight.(cement looks good on the ground, not in space)

If 300 of us will call Martha at (301) 589-6062 and each donate $500 then we'll be able to enjoy the sounds from Phase 3D's transponders as it passes high over head.(I can almost hear it now)

If 600 of us would just call Martha at (301) 589-6062 and each donate $250 then we would have an excellent tool to use for recuiting new members into the greatest organization amateur radio has ever known: AMSAT.

If you have made a pledge to donate to the Phase 3D project and have not keep it, Martha is impatiently waiting to hear from you at (301) 589-6062.

If you have never donated to Phase 3D, you can put an end to that retched feeling of guilt in your guts by sending a donation to Martha at 850 Sligo Ave., Suite 600, Silver Spring, MD. 20910-4703

If you have never heard of Phase 3D, check out: http://www.amsat.org
then call Martha at (301) 589-6062 and donate.

Did I mention that Martha likes to sign up new members too? If you're reading this and are not an Amsat member... Shame Shame Shame. Call Martha and sign up today, you'll sleep better for it.

If you live some place other than North America, send your Phase 3D donation to your local Amsat Organization(They all need project funds).

A little lesson: look at the header of "spam" postings and you will see
the various newsgroups they are posted to.

>> paste. This will copy the entire message (If   your right mouse button

>> is inactive you can simply use the "Ctrl+V" keys or select "Paste"
>> from the "Edit" menu.). If after all that you still cann't edit the
>> message, the final choice is to simply re-type the message.
>> However, I'm sure you'll see that copying and pasting this article
>> into a New News message is fairly simple and straight-forward. *
>> Once you've made all of your changes to the article you will want to
>> save the article as a ".txt" file either on your C: drive or A:
>> drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU'VE SAVED IT!
>>
>> OK. I assume you've now mailed your Five envelopes with the One
>> Dollar bill and piece of paper requesting to be placed on the
>> recipient's mailing list, you've removed the person in the #1 spot from
>> the mailing list and placed your name at the bottom of the list,
>> completed any editing you felt necessary to the text of this article,
>> and saved the article as a ".txt" file. Let's now move on to STEP 3
>> and get the message out so you can start harvesting the fruits of your
>> labor.
>>
>> STEP THREE: Now it's time to post your article to any newsgroups of
>> your choosing. I'm assuming you still have your revised article in
>> front of you. Now the fun really begins. You will want to post your
>> article to at least 200 Newsgroups. As I will explain below, posting
>> to 200 Newsgroups, statistically ensures that you maximize the
>> probability of achieving a return of at least $50,000 on your
>> investment of $5. As you can see I've already posted to several
>> Newsgroups, therefore all you have to do is click on the "Send" Icon
>> and you will have made your first delivery. It shouldn't be but a week
>> or two before you start seeing returns in the mail.
>>
>> HOW CAN I POST TO ALL 200 NEWSGROUPS AT ONCE? I thought you'ld ask
>> that. Remember that we saved our article as a ".txt" file. Just
>> follow these additional simple steps. First, open your Newsgroup
>> window. By holding down the "Ctrl" key you can highlight all the
>> Newsgroups to which you would like to post your article. Next, open up
>> your "New News" window (remember in Netscape you merely need to click
>> on the "To:News" icon. You should now see all of the selected
>> Newsgroups. Next type your catchy message in the "Subject" box. Next,
>> click on the "Attachment" button directly below the Subject title. The
>> "Attachments" window will pop-up. Click on the "Attach File" button.
>> You will then see the "Enter attach file" window. Find your file and
>> click on the file name, then, click on "Open". This will return you to
>> the attachment window. Click OK and your article will be compressed and
>> ready for distribution once you "Send" the article. If you would like
>> to test the delivery first, I would suggest that before you select the
>> Newsgroups for mass distribution, you simply select the Newsgroup
>> "alt.test" and deliver your message. You will then be able to go to
>> this Newsgroup to review your article. If you're satisfied with the
>> presentation and content of the article, just repeat the process
>> outlined above to send a mass mailing to your selected 200 Newsgroups.
>> REMEMBER 200 Newsgroups is the suggested minimum. However, you can
>> post to as many as you would like.
>>
>> SO WHY SHOULD I GO THROUGH ALL OF THIS? PROVE TO ME WHY THE SYSTEM IS

>> SUCCESSFUL AND WHY IT ACTUALLY WORKS? Well that's the same question I
>> asked myself. If its that simple to make money, why isn't everyone
>> doing it? Well as I told you before, take a look at a few of the
>> newsgroups and you'll see that there really are a tremendous number of
>> people actively participating. SO READ ON! THEN STOP SCREWING AROUND
>> AND GET GOING SO YOU CAN JOIN IN ON THE FUN AND THE MONEY!!!!!   The
>> system works for the following key reasons. The Internet is growing at
>> a phenomenal rate having already doubled since last year. With over 40
>> million people, and growing, surfing the Internet, and an estimated
>> 100,000 Newsgroup users participating in almost 20,000 Newsgroups (and
>> that   doesn't include those millions of Internet surfers looking for a
>> reason like this to join in the excitement), the exposure to the mass
>> market is incredible. And it is this exposure which drives the ability
>> for this MailList venture to be successful.
>>
>> Let's look at the mathematical progression which ensures success in
>> its most simplest form. Assume that out of your posting to 200
>> Newsgroups, you received only 5 responses, a response rate of only
>> 2.5%. However, you've just made your $5 investment back. The people
>> responding to your article represent agents who will now move your name
>> to the number 4 spot and post to 200 Newsgroups each. That means your
>> name is out on a list to 1000 Newsgroups. Assuming again that your
>> agents realize a 2.5% response rate, you will receive an additional
>> $50. These 50 new agents move your name to the number 3 spot, make ten
>> thousand postings resulting in $500 sent to you. Again, these 500
>> agents make 200 postings each with your name now at the number 2 spot
>> and the result is $10,000. Finally, with your name at the number 1
>> spot and five thousand agents making 200 postings each, it is fairly
>> easy to see mathematically how you can get to $50,000 pretty quickly.
>> And once you've dropped off the list, you simply access another
>> newsgroup posting and begin the process over again.
>>
>> SO WHAT'S STOPPING YOU? AFRAID TO SPEND A MERE $5? NEXT TIME YOU PLAY
>> THE LOTTERY OR BET ON THE FOOTBALL POOL THINK ABOUT HOW MUCH MORE YOU
>> WOULD HAVE IF YOU'LD ONLY TAKEN A SIMPLE, WELL CALCULATED RISK AND
>> JOINED THE FUN. GO AHEAD.   FOLLOW THE SIMPLE INSTRUCTIONS ABOVE. HAVE
>> FUN AND BE SUCCESSFUL. YOU CONTROL YOUR OWN DESTINY!!!!!!! --

Hello all,

I have large inventory of (NEW) TRW Type FRW -22 Flat wire wound 10 ohm
resistors @ 55watts.
These resistors are 3.5 inches long, 1 inch wide, 1/4 inch thick. They mount in
the horizontal position using
the pre assembled shaft thru the middle and standoffs that accept two #8 or #10
screws.
The resistor mounts 1/2 inch above the chassis.
These are Mil spec vitreous enameled units of very high quality.
Put them in series or parallel for many applications.

65 cents each, plus a small fee for shipping via US mail.

Let me know how many you need.

Allen

Hi all together,
I'm a paraglider pilot and I need a portabel amateur radio to
communicate with friends and other pilots. I know that there are 2m
and 70cm radios. But what is the better for pilots? Which has a bigger
range?
Please write.

bye,
Marcel

Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating.
A high quality picture is available in TIF format
on request. The unit can be viewed with Paint
Brush Pro. A full spec sheet is also available on
request.

For further info E-mail RTE
at rte@global.co.za
or call (011) 882-9182
or Fax 882-1122
Johannesburg.

RTE also buys, supplies, rents and repairs Comms.
Monitors plus all sorts of Test Equipment.

Please, get a proper airband radio and be legal, instead of abusing
amateur bands, Marcel. Sadly there are people who use 2m and 70cm
illegally for flying-related purposes, but you will make no friends in
the amateur community by doing so yourself. You also risk having the
radio confiscated and being prosecuted.

Good luck with your paragliding and in finding a legal airband radio.

The pros are the obvious freedom of a cordless headset.

The cons are great, in my opinion.

1)You can be listened to by other cordless phones, scanners, baby monitors and other devices. This results in no privacy.

2) If you live in an appartment or densely populated community, you can hear other handsets or headsets using the same frequency or channel you are on.

3) The batteries in the cordless unit can die with little or no notice. Nicad batteries have a fast "drop-off" and the time spent off the charger is limited.

4) In some cases other handsets or headsets can capture your base unit's dial tone and dial out on your line. This problem has been resolved with the newer models using security codes.

These problems become more evident in apartment dwellings where the

chances of other having a cordless close to yours is strong.

I hope this helps you with your concerns.

Rich

hello from Jim in Atlanta. All previous points correct,I've got some
experience with those too. I have found that the 900 mhz that use
spreadspectrum encryption work real well. You can be on hf running a k
with no rfi. The range is great,has the same charecteristics as our band
close by. Can be monitored,but they have to work for it! In my opinion
worth the expense. Good Luck KD4CDB

The best one is the one for which you have a licence. In your case,
probably none.

Well I hate to say it - please forgive me if I'm wrong... But from your post,
it sounds as if you don't have an amateur license. This could land you a fine
or in jail at worst and have your equipement confiscated at best.

A lot of paragliders I know as well as baloonists use CB. Do us all in the

amateur community a favor and don't the amateur bands. Use CB.

Hi,

A few years ago I purchased a CAT converter for my FT767, built in the head shell of the 25pin socket and made by JCom.

The interface was built around the Dallas 1275 chip and was powered from the 232 interface.

Does anybody know the whereabouts of JCom nowadays? or anybody else who makes a similar interface?

Basically I want it to connect either my AR8000 or Opto Cub to my PC.

TIA

I see that you are in Europe. I don't know what the regulations are
there, but here in the US, there are low-power 49 mHz FM radios that
do not require a license. I would check with a local radio club in
your area to learn more about what is available to you.

Andrew, WS7J

My first post:
Hi all together,

I'm a paraglider pilot and I need a portabel amateur radio to
communicate with friends and other pilots. I know that there are 2m
and 70cm radios. But what is the better for pilots? Which has a bigger
range?
Please write.

bye,
Marcel

And now:
I know that it's illegal to use an amateur radio without a license.
Everybody sais that I have to make it but nobody helps me. Of course I
make the license before I use a radio.
If you wanna help me please write a mail. But write no mail if you
only wanna say that I need a license.

Thank you.

Its difficult to say, but in my opinion an old kenwood hand held would
travel better if you want to attract the people on the ground below that
you are heading for, it may hurt someone if it hits them, but by crikey,
they'll move ok.

Probably better is to forsake an amateur radio and practise shouting out

"watch out the f*** below"

this mode has been proven time and time again to get through when normal
modes of communication fail.

good portabel radios ? I think you can get them on the Portabello road.

:-)

Best way is to obtain a proper Air Crew Radio Licence. There are a
number of good quality Air Band transievers on the market for about 350
pounds sterling or so, I personally have used an ICON for the past eight
years without any trouble at all.

Good Luck :-)

Happy New Year, all.

I'd like to be able to record (unattended) my favorite radio programs
and features for later listening. Something like a VCR with multi-event
programming would do the job nicely. Some have suggested using a VCR and
a tuner connected to the audio input, but that would require going back
and retuning the receiver to different stations between events, which is
not possible in this case.

Any ideas? Thank you in advance.
Michael

Me, too!

I bought a Reveal FM radio board for the PC (about $40 at Best Buy), with the idea of being able to program it as you suggest.

<flame> I got disgusted at the dain-bramaged software that came with it (only 10 presets, hard to set with fixed scroll rate, roundoff errors in freq display, . . .). I'd have kept it if I could have gotten specs for how to control it -- I'd have written a control program myself. But their "24/7" tech support line put me on permahold so I gave up and returned it. </flame> I could always buy another one if I decide to try it again someday. It seemed like a well-build piece of hardware.

Seems like you could build an integrated control out of an old XT with the FM radio card in it and an IR emitter to drive the VCR. If the VCR won't record sound without a video signal to sync to, put a CGA card in the PC; you could put a timestamp on the video to tell you when the audio was sent, freq, station/program ID, etc., in nice bold characters that would show up in fast forward / rewind.

If your existing FM receiver is IR controllable, then that opens other possibilities.

I agree, this is a product that is missing from the marketplace. Probably wouldn't be terribly hard for the VCR makers to implement, either; they already have the front end, what's a couple more chips for the FM broadcast IF and detector? They can sell an entire Walkman for $cheap. . . It'd be neat: an 8-hour stereo audio recorder! There's not much on the tube worth watching, anyway.

We can't be the only two who've felt this need. Ideas, anyone?

Someone else asked for this too so I'll post to the newsgroup.
There is a bandplan available on the web at the University of
Texas Amateur Radio Club site, http://www.utexas.edu/students/utarc/
Look for a icon that mentions band plans.

BTW, I'm posting this from a friend's account. If you have any questions
you can reach me at barron@liant.com.

I bought a HTX-242 recently. Has anyone else noticed
a carrier like signal on any of the frequencies programmed
into memory? On 146.76 I have a constant S-1/2 signal,
no intelligence, no flucutation, apparently generated
from within the HTX-242.

Comments and/or fixes ??

146.76 MHz is a harmonic of TV colorburst frequency, IE 3.579... MHz.
Since TV colorburst crystals are so universal, and thus so cheap, they
are used as references for lots of things, notably Touchtone pads, and
commodity single chip microprocessors. Likely this is the source of
your phantom signal.

Getting rid of it may be a challenge, but it is easy to move off of
76. Just put a gimmick capacitor across the crystal and twist until
the phantom moves far enough off channel to no longer be a nuisance.

If you aren't familiar with gimmick capacitors, they are made with
two pieces of insulated wire. Just solder one wire to each lead of
the crystal, then twist the wires together to increase capacitance
and shift the crystal operating frequency. Since 146.76 MHz is the
41st harmonic of 3.579... MHz, you won't have to move it far, and
the circuit in which it is used won't be adversely affected.

Wires from 1 to 2 inches in length should do. Cut off the excess
wire tails after you've moved the frequency far enough, and tape up
the gimmick so it won't untwist. Works fine, costs nothing. I use
this method to move the microprocessor harmonic of TNC2s and their
clones off of 145.01 MHz.

I normally use enamel insulated wire, but regular thermoplastic
insulated wire will work too, it just takes more twists to get
the same capacitance.

Gary

Rather than getting into the rig, and hopefully you bought it recently
new, why not send/take it back to RS. I would think that something new
with an anomaly such as this is really not acceptable and should be
fixed, replaced or refunded. There are plenty of good 2M rigs out
there with competitive prices.

Happens in 2 HTX202s that I know of -- a spur on 146.76. One guy sent
it back to r.s. and they said that it was working "within specs".

Great suggestion, Gary, I'll hafta look for a color tv rock in there.

Hello, I have the HTX 242 and I seem to have the same problem with 146.76
and a few others. I imagine after finding out I'm not the only one, tht
this is internal. By the way I work for Radio Shack here in Winnipeg so
I will check this out and post a response later......keep tuned.

organization: Island Net in Victoria, B.C. Canada
newsgroups: rec.audio.tubes,rec.radio

I am repairing a 1955 (I think) Victrola record player for a friend. The amplifier works if I patch audio onto the cartridge leads, but it makes no sound when playing a record, so I think that the cartridge may have packed it in. The cartridge has an aluminum body and mounts to the tonearm with two screws. It has a needle on one side for 33/45 and one on the other side for 78s. The cartridge has the Astatic logo engraved onto both sides. There is a red label on one side of the cartridge that reads:

Use Astatic Needles
"R-78" White Label Side
"R" Red Label Side
Made in U.S.A.

There is a white label in the other side of the cartridge. 413 and 16LBDM are stamped on the label. The print on the label reads:

Manufactured by L. D. Cahoon & Co. Ltd.
Toronto, Canada
Licensed under patents of the Brush Development Co.
Made in Canada

If anyone has any info as to where I can find one of these cartridges, can you please e-mail me (Ralph.Barone@bchydro.bc.ca), as my presence on the newsgroups is somewhat spotty.

PS: If anyone can crosspost this to rec.audio.antique, please do. I do not get this newsgroup on my server.

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH!

Hello!

Would you like to make thousands of dollars, quick,and legally?
Then keep reading....please take five minutes to read this
article it will change your life.It's true!

You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!
I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
intrested, keep reading; if you're not, have a nice day.

I was browsing around the newsgroups one day, and I
stumbled across this article. Since it had to do with making
money, which I never pass on,I decided to give it a try, and this is what
it said:

Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar
to this that said you could make thousands of dollars in weeks with only
an initial investment of $5! So, I thought, "Yeah, right, must be a
scam", but I was curious, like most of us , so I kept reading. Anyway,
it
said that you send $1 to each of the 5 names and addresses stated in the

article. You then place your own name and address in the article at
the bottom of the list at #5, and post the article in at least 200
newsgroups (there are thousands).

So after thinking it over, talking to a few people first, I decided to
try it.

I figured what have I got to lose except for 5 stamps and $5, right?

Someone who has tried it says:" I started getting money in the mail!

I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had
over $10,000 dollars, and it's still growing. This is my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money is still coming in.....".

Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of the article NOW, so you get the informatoin off of it, and begin making money.
The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. It is also

a good idea to put on that piece of paper the number of the person who you got the article from. Get five $1 bills and place ONE inside each piece of paper that you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours).
Put one paper inside the envelope and seal it. Do the same for all 5.

You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper.

What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. J.Burgess
   73 Pebble Lane
   Blackwood , N.J. 08012

2. Josee Labelle
   P.O. Box 54230
   1562 Lonsdale Avenue
   North Vancouver, BC
   V7L 3L5

3. Occupant
   P.O. Box 721193
   Houston,Tx 77272-1193

4. E.J. Garbin
USF#1562
4202 E. Fowler Ave.
Tampa, FL 33620-1562

5. Occupant
54 Ridge Road
Waterville, ME 04901-4121

STEP 2: Now take the #1 name off the list that you see above, move the
other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as
number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200.
HOW TO DO THIS: If you have Netscape 3.0
do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which

is on the far left when you're in the newsgroups page. This will bring

up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to

something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST

CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once)

THIS whole article WORD FOR WORD, except to insert your name at #5,

and

to remove #1 off the list, plus any other small changes you think you

need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE

WILL
BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND
THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE
IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a
different newsgroup, so that way, it posts to 200 DIFFERENT
newsgroups,
you see? Now you just have 199 to go!! (Don't worry, each one takes
about 30 seconds, once you get used to it) REMEMBER 200 IS THE
MINIMUM.
The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your
$1
envelopes from various people all over the world within days. HINT
THE
MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may
want
to rent a PO Box eventually because of all the mail. If you wish to
stay anonymous, you can come up with a name, such as "manager" or
"investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which
is
actually VERY LOW. So I made 5 dollars with my name at #5. Now then,
each person who just sent me $1 makes, say only 200 postings, now with
your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not
including
yours too. 50 people send you $1 now; thats $50 you just made! Now,
then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR
10,000 POSTING (50x200). Average return is 500 at $1 each is $500.
They make 200 postings, which is 5,000 returns at $1 each, which is
$5000 dollars! And finally, 5000 people make 200 postings wach with
YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR
NAME
DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY,
AND
IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the
latest
posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5

TO
THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting
again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....

People have said, "What if the plan is played out and no one sends you
the money?" So what! What are the chances of that happening when there
are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY
and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make
sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups
to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST
POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!

**By the way, if you try to decieve people by posting the messages with
your name on the list and not sending the money to the people already on the list, you will not get much. Someone who did that made $150 dollars,
and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

I wonder if this happens in the HTX-212 also? After all the 212 was the
model before the 242. 73s

I have a Sony ICF-2010 Short wave radio. This is the best selling
radio that has become the benchmark standard for short wave radios.
It is in excellent condition.

For a description you can look at:
http://www.universal-radio.com/catalog/portable/0841.html

Does this birdie still exist with the antenna disconected? At my
location low level carriers are receivable with the antenna connected
from CATV leaks and from this computer. With the antenna disconnected
the receiver is reasonably quiet. I'm using an HTX-212.

On 146.760 with an external antenna just now I get no S-meter reading;
however, with a short wire I get S7 from, I think, this computer.

HELLO,

PLEASE take 5-10 minutes to read this and it WILL change your life !!! I know this dollar idea is all over the net, but it really does work if everyone plays honestly and fairly. Let's make America strong and wealthy
again.

NO CATCH, keep reading.

FOR YOU TO SEE HOW YOU, A PRESENTLY SKEPTICAL, BUT CURIOUS PERSON, WILL BECOME...SUPER GENIUS MONEY MAKER...I DID BEFORE YOU, BECAUSE I READ THE ARTICLE I SAW POSTED, JUST LIKE YOU ARE DOING RIGHT NOW!

YOU WILL SEE LIKE I HAVE, HOW TO MAKE THE BIGGEST AND EASIEST CASH YOU EVER SAW, JUST LIKE I HAVE!

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks with only an initial investment of $5!

And I thought "Yeah, right, what a scam", but like you (you ARE reading this), I was curious. So I kept reading. The letter said to send $1 to each of the 5 names and addresses listed in the article, then to place my own name and address in the article at the bottom of the list (at position #5) and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!!

So after thinking it over, I tried it. I figured what have I got to lose
except for 5 stamps and $5 ?

Well, guess what..within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then the money kept coming IN, tripling in size and multiplying by THIRTEEN times the amount that I got the first week! In my first week I made about $20 to $30 dollars. But by the end of the second week, I had made a total of over $1000!!! In the third week, I had recieved over $13,000 dollars and it's STILL growing! This is my

fourth week, (Nov 15) and I've made around $42,000 TOTAL, and the money is still pouring in...WOW!!!

Let me explain how this works, and most importantly, WHY it does...

*** The process is very simple, and it consists of 5 EASY steps: ***

STEP 1: Get 5 seperate pieces of paper and write your name and address along with the words "PLEASE ADD ME TO YOUR MAILING LIST. YOU ARE CURRENTLY NUMBER n" (where n = 1 to 5 position on the list. This way you are not just sending a dollar to someone, you're paying for a legitimate service.

STEP 2: Get five $1 bills, and place ONE bill inside each of the five pieces of paper you wrote on, and fold each piece of paper so the bill won't be seen in the envelope. You should now have 5 sealed envelopes. EACH one has $1 in it, folded inside the piece of paper.

STEP 3: Mail the 5 envelopes to the following 5 addresses

1. Dano 6185 1/2 Montezuma Rd. San Diego, CA 92115
2. D. Russell 113 McHenry Rd. #304 Buffalo Grove, IL 60089
3. K. Wells 20 James Dr. Metropolis, IL 62960
4. M. Hartigan 1346 Lance Ln Carol Stream, IL 60188
5. D. Kil 4534 Frontier Portage, MI 49024

STEP 4: Using the above list, edit it by DELETING NAME #1 ON THE LIST. Put YOURSELF AT POSITION #5.

Move the other 4 names up (5 becoming 4, 4 becoming 3, etc.)
The longer your name is on the list, the more you make, and number 5 will be on the list the longest!! That's where you want to be!!

STEP 5: Post your edited article (with your name at position #5) to at least 200 newsgroups (I use ALT.NET, which has about 26,000 of them!) I found that 200 will do quite nicely!!

HOW TO POST YOUR EDITED ARTICLE:

If you have Netscape 3.0, do the following EXACTLY:
Click on any newsgroup like normal, THEN click on "TO NEWS", which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

Leave the newsgroups box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$ " or "FAST CASH"!!!

Tab once and you sould be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off of the list, plus any small changes you think you need to make. Keep almost all of it the SAME!

When you're done typing the WHOLE article, click on FILE in THE BOX RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

If you still have all of your text, send or post to this newsgroup now, by just clicking send, which is right below FILE, and right above Cc:.

Here's where you're going to post all 200. OK, click on any newsgroup then click on "TO NEWS", again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT box. This will result in a new box coming up. Click on ATTACH FILE, then your find your file that you saved. Then, click once on the file, and then click "OPEN". then click on OK. If you did this right, you should see your file name in the attachments box, and it will be shaded green.

If you use EXPLORER, it is just as easy.

HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT, GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE," A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW.

IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE IN A NEWSGROUP, ALL YOU HAVE TO DO IS TO REPEAT "CRTL" AND "V" AND PRESS POST.

That's it. Each time you do this, all you have to do is type in the name of a different newsgroup (I do TEN at a time) so that you end up posting to 200 DIFFERENT newsgroups. It only takes my computer-illiterate wife about 30 seconds per post, doing 5 NEWSGROUPS PER POST!!! And, the more you post, the more money you will make!!! And once you see how easy this is, I promise you that YOU WILL BECOME EFFICIENT AT THIS PROGRAM!!!

You are now in the mail order business, and you will start recieving your $1 envelopes from various people all over the world within days.

HINT - THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE.

You may want to rent a P.O. Box like I did because of all of the mail. If you wish to remain anonymous, you can invent a name, such as

"manager" or whatever.

Just make sure all of the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORKS THE WAY IT DOES!!!!!

The Internet has grown tremendously. It doubles in size every 4 months!! Literally THOUSANDS upon THOUSANDS of people read newsgroups EVERY day!!!

Out of 200 postings, let's say I only recieve 5 replies, which is actually VERY LOW. So I made $5 dollars with my name at position #5.

Now then each person who just sent me $1 makes, say only 200 postings, now with your name at #4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; that's $50 you just made!! Now, then your new 50 agents post 200 each with YOUR NAME AT POSITION #3, OR 10,000 POSTING (50 X 200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars!! And finally, 5,000 people make 200 postings each, with YOUR NAME at number one! YOU GET A RETURN OF $50,000 BEFORE YOU NAME DROPS OFF OF THE LIST!! AND THAT'S IF EVERYONE ONLY DOES 200 POSTINGS, AND IF ONLY 5 PEOPLE RESPOND!!!!!!!!!!

When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE PEOPLE ON THE LIST, PUTTING YOUR NAME AT #5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So are you willing to risk $5 dollars for a chance to CHANGE your financial future for the rest of your life? Believe me IT WORKS !!!

People have said, "What if the plan is played out and no one sends any money?" So What! What are the chances of that happening, when there are TONS OF NEW, HONEST USERS AND NEW, HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try?

Estimates are at 1,000,000 per D. A. Y. worldwide, with many of those joining the newsgroups!! You might even be new, and you are reading this right now, correct?

Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU !! You just have to be honest. Keep a list of who sends you $1.00, and keep an eye on the newsgroups, to make sure everyone is playing fair.

REMEMBER HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE ALOT OF MONEY!!! GOOD LUCK TO ALL, PLEASE PLAY FAIRLY THE FIRST TIME, AND YOU WILL REAP THE HUGE REWARDS FROM THIS... TONS OF X-TRA CASH!!!!!!!

**By the way, if you try to deceive people by posting the messages with your name on the list and not sending the money to the people already on the list, you will not get much. A guy I talked to did that, and he only made $150, and that's AFTER 7 or 8 weeks!! Then he wised up. Who is gonna help you if they don't see you are honestly doing your part, by sending them each $1 like they did before you?? Then he SENT THE 5 $1 bills, the five people ADDED HIM TO THEIR LISTS, and in 4-5 weeks, made over $10,000!!!

THIS IS THE FAIREST AND MOST HONEST METHOD I HAVE EVER SEEN TO MAKE HUGE CASH BY INVESTING ONLY A LITTLE TIME!! IF YOU ARE REALLY SERIOUS ABOUT CHANGING YOUR LIFE AND BECOMING DEBT FREE, DO IT , DO IT RIGHT NOW, AND IN A MONTH, ALL OF YOUR DREAMS CAN COME TRUE!!!!!!!!!!!!!!

All the radio shack two meter rigs do it. Both my HTX202s have the birdy, but usually they are only audible on the rubber duckie. On a real antenna, if you drop open the squelch, you can tell there is something there, but not bad enough to hurt RX generally.

I can't say about the 242 cause i've never had one, but the 212, when I had it, did the same thing. It was usually only audible with no antenna connected. A couple of times, it got much worse, the birdie was s6/7. I opened up the rig and found the screws securing the circuit board were

loose. After tightening, all went back to normal. Dunno if this voids
the extended warranty or not.

I believe the problem is the 41st harmonic of the 3579+ xtal oscillator.

  Yes, with antenna disconnected it still exists. I drove down to
VA Tech taking my dau back the other day. The S-1/2 carrier on .76
was present everytime I checked along the whole 300 mile trip, with
and without antenna.

  Is anyone from Radio Shack reading this group? Wanna give us
some insight here ??

Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating.
A high quality picture is available in TIF format
on request. The unit can be viewed with Paint
Brush Pro. A full spec sheet is also available on
request.

For further info E-mail RTE
at rte@global.co.za
or call (011) 882-9182
or Fax 882-1122
Johannesburg.

RTE also buys, supplies, rents and repairs Comms.
Monitors plus all sorts of Test Equipment.

I get birdies from cellphones. Have to unplug the thing to scan the
whole memory bank! I don't know if the cellphone is radiating on the
actual 2 meter freq or if it's an IF of the 2 meter rig, but it sure is
aggravating!

forsale

I have a Bearcat BC-2 Multi band Scanner (that I have hardly used)
for sale.

It's a pretty neat device in that not only you can just punch in the
state that you are in (and it picks up Police, Highway Patrol, DOT,
weather, etc.) It also alerts you to the presence of radio waves in
the vicinity (has a large red light and beeps). That way it offers
protection from Vascar, airplanes, etc). It retails for $250+ and
mine looks brand new. Includes cigarett lighter plug, mounting
brakets, car radio antenna splitter/and wire antenna (that attaches
to your windshield with small suction cups).

$$ Best Offer.

PS. I will be in DC area in a couple of weeks (for the weekend).

Taking 5 minutes to read what follows could be one of the best decisions you have ever made.

READ THIS!!!!

I saw an article in an internet newsgroup telling me that I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my attorney, friends and family about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it it to be me. After rejecting the idea at first, I realized all I had to lose was the $5 in my wallet. I figured what the heck, and decided to give it a shot.

A friend told me that he invested $5 and two weeks later he began receiving money in the mail! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, he had received a total of $32,445! It came from everywhere in the world.

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you receive a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER - PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simply:

1) Write your name, address, and country on 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." You should use thick dark paper to discourage mail theft. Fold a $1 bill in each piece of paper and mail them to the following 5 addresses:

1. Brian Covey
   4301 Fernmont St.
   Kettering, OH 45440

2. Michael Noppenberg
   7618 Pissarro Dr. Apt. 106
   Orlando, FL 32819

3. Binti Jua Hayes
   616 NW 22nd St
   Wilton Maners, FL 33311

4. Conroe Dowell
   727 Polkville Rd
   Shelby, NC 28150

5 John Higgins
   124 South Sheridan Ave.
   DeLand, FL. 32720

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. You can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 19,000, so it shouldn't be hard to find that many.

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a psuedonym, but make sure your address is correct.

Now, here is why the system works:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those 'Make Money Fast' posts more and more. All that growth means profits for everyone who participates. There are no losers.

Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Total income in one cycle = $55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?" Big Deal, so you lose $5 - but what are the chances of that happening??

There are millions of internet users, and millions of new net surfers every month.

Remember - read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER - HONESTY IS THE BEST POLICY.
WHAT ARE 5 DOLLARS TO YOU?
YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $49? $122? Start making your plans, because it can happen to you.

Extra section:
HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

If you have Netscape 3.0 do EXACTLY the following:

1) Click on any newsgroup like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$ or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except insert your name at #5, and remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.

Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

NOTE: If you don't want to type in the whole article by hand, AND you know how to use a plain text editor (like Notepad), you can edit the file ahead of time, then attach it as shown in step 6.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc:

6) Here's where you're going to post all 200. OK, click on any newsgroup then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message.

Click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that if you did this right, you should see your file name in the attachments box, and it will be shaded green.

NOTE: If you don't want to type in the whole article and you know how to use a plain text editor (Notepad), you can edit the file ahead of time, then attach it.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON,

highlight this article. Then press the "ctrl" key and the "c" key at the same time to copy this article. Then print this article for your records, to have the names of those you will be sending $1 bills to.

2) Go to the news groups and press "post an article".   A window will open. Type in your headline in the subject area and then click in the large window below. Press "ctrl" and then "v" and the article will be placed in the window.

If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new newsgroup all you have to repeat is "ctrl" and "v" and press post.

3) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way it posts to 200 DIFFERENT newsgroups, or more.

You see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it.

REMEMBER 200 IS THE MINIMUM. The more you post the more money you will receive.

AND THAT'S IT!! THEY ARE ONLY STEPS!!!

Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating.
A high quality picture is available in TIF format
on request. The unit can be viewed with Paint
Brush Pro. A full spec sheet is also available on
request.

For further info E-mail RTE
at   rte@global.co.za
or call (011) 882-9182
or Fax   882-1122
Johannesburg.

RTE also buys, supplies, rents and repairs Comms.
Monitors plus all sorts of Test Equipment.

Is an S 1/2 signal a problem in your area? I couldn't set my squelch
low enough to ever notice this in the metropolitan area's I travel in.

I can't imagine this being an issue, I don't recall ever working an FM
signal that was readable with only an S 1/2 unit.

I haven't noticed this on my HTX-212, but I never set the squelch that low.

I have a C50 question. According ot the boot load section of the
databook, it says that their are several methods of loading an external
program in to internal memory, however if you look at the schematic
for the cheap-O kit, the bus is not set for the 8-bit parallel load
at FFFF (uses *BR,*DS at reset).

Is it possible that the 27C256 has the appropriate bits set?

Doug

This is my first time posting to a NewsGroup, so I hope I get it right! I have an old radio that belonged to my father and I would like to know more about it (when made, amount produced, value etc.) Can anyone out there help? Its a General Electric X-371 Receiver. It is a large table top radio 24inches wide, 15inches high, 15inches deep and weighs about 50lbs. It has a magahony cabinet with front speaker and shows 12 bands in a semi-circle in a front window. With it I have a booklet called "International General Electric Radio Handbook" produced by World Radio Handbook, this was prepared by O.Lund.Johnansen of Hellerup, Denmark. This radio would have arrived in our house about 1957-58. I live in Newfoundland in Canada and am interested in setting up the radio to listen to shortwave, and I would like help on type of antenna which would be best, cheapest, easiest to set up? Any help would be appreciated, thanks

That's sounds like a great radio. It was probably built before WWII,
in the 1930's. If the tubes are still good (and they *should* be), it
will give you many hours of pleasure. I would use a long wire antenna,
and be sure to ground the chassis IF there is a connection on the back
of the chassis. Be careful, though, some of these radios had a *HOT*
chassis (one side of the 115 v line is on the chassis)

THIS IS FOR PEOPLE WHO ARE REALLY INTERESTED IN GETTING FASTCASH. IF YOU ARE
READING THIS TO REPORT ANY OF THE PEOPLE IN THE LIST, YOU ARE LAME, YOU SUCK
, AND YOU HAVE NO LIFE. AND YOU NEED TO MIND YOUR OWN BUSINESS. THIS DOESN'T
CONCERN YOU PEOPLE, SO FUCK OFF, AND GO AWAY. READ BELOW...

Believe it or not, you will get fast easy cash by just sending $5, yes,
just 5 dollars. You will receive $25,000 to $50,000 within 3 to 4 weeks.
Please take a couple minutes to read the rest. You will see how it works.
Act today, and just wait for your money to arrive at your mailbox.
Hello! I've got some awesome news that I think you need to take two
minutes to read if you have ever thought "How could I make some serious
cash in a hurry???", or been in serious debt, ready to do almost anything
to get the money needed to pay off those bill colectors. So grab a snack,
a warm cup of coffee, or a glass of your favorite beverage, get comfortable
and listen to this interesting, excting find, that even a 13 year old
can do!
Let me start by saying that I FINALLY FOUND IT! That's right! I found it!
And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level
marketing, mail-order schemes, envelope stuffing scams, 900 number scams...
the list goes on forever. I have tried every darn get rich quick scheme out
there over the past 12 years. I somehow got on mailing lists for people
looking to make money (more like 'desperate stupid people who will try
anything for money!). Well, when I was a teenager, these claims to get
'get me rich quick' sounded irresistable! I would shell out $14.95 here,
$29.95 there, $24.95 here, and another $49.95 there. I had maxed out my
new Circuit City Card AND my Visa... I was desperate for money!! So, I
gave the mall a chance but failed at every one of them! Maybe they worked
for some people, but not for me. Eventually, I just tossed that JUNK MAIL
in the trash when I got the mail. I recognized it right away. I can smell
a money scam from a mile away these days, SO I THOUGHT... I thought I
could sniff out a scam easily. WAS I WRONG!!... I LOVE THE INTERNET!!!

I was scanning through a NEWSGROUP and saw an article stating to GET CASH

FAST!! I thought... "Here on the internet??? Well I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became more curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY... EVER!!

Ok, so the $50,000 in cash was maybe a tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail' for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised aarticle now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in... prepared to maybe receive about $1000 to $1500 in cash or so... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia!
I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!!
Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors

are for the five stamps, the five envelopes, and the five one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and (ironically), enjoy walking (you can run if you like! :-o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF THOSE LOTTERY NUMBERS FOR TODAY, EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY SYSTEM NOW!!! YOU CAN'T LOSE!!!

So how do you do it exactly, you ask? I have carefully provided the most detailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!?!?!? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE ***

OK, Read this carefully. Get a prinout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name and address to your list". This creates a service out of this money making system and thus making it completely legal. You are not randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name, address, and e-mail address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in : "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill (no checks or money orders) and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you GET YOUR MONEY COMING TO YOUR MAILBOX. Look at the list off five people; remove the first name from position one and move everyone on the list up one slot on the list. Position 2 will now move to the position 1 slot, position 3 will now become position 2, and so on. Now put your name, address, zipcode, and

country in position 5, the bottom position on the list.

4. Now upload this ubdated file to as many newsgroups and local bulletin boards' message areas & file section as possible. (Preferably about 200, if you have the time) The more you post it the more chances you have someone responding to it. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH", HERE IT IS!" or "$$$ Fa$t Ca$h $$$", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY OUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of totol uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or Wordpad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slighty different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file FASTCASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen.

Something
 like "Download this to read how to get cash arriving in your mailbox
 with no paybacks!" or something to that affect. Just make sure it
represents
 its true feasiblity, NOT something like... "Get one million dollars
 flooding in your mailbox in two days!"

 You'll never get ANY responses!

 6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE
CASH
 IS ON ITS WAY!! Expect to see a little money to trickle in around 2
weeks,
 but AT ABOUT WEEK 3 & 4, THE MONEY STORM WILL HIT YOR MAILBOX!! All you
 have to do is take it out of the mailbox and try not to scream too load
 (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

 7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something
special
 you always wanted or buy that special person in your life (or the one
you
 want in your life) a gift they'll never forget. ENJOY LIFE!

 8. Now when you get low on this money supply, simply re-activate this
file
 again; Reposting it in the old places where you originally
 posted and possibly some new places you now know of. Don't ever lose
 this file, always keep a copy at your reach for when you ever need
fastcash.
 THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME
AGAIN
 WHEN FASTCASH IS NEEDED. Think about it, if used correctly return for
so
 little an investment?
 Good luck and give this plan your all, it will definitely pay off!
 HAVE FUN WITH IT!!!

What is "quading?"

Give an idea of range, do you need waterproof, etc and maybe somebody can
help you.

>Tube type hand held?

  But of course. Didn't you ever watch the TV show "Combat" (or re-runs).
One of their WWII portable radios was in a field pack, but another type
literally WAS a tube type hand held... a LARGE handheld, but a handheld
radio nonetheless.

  But for FREE????? Well, I did get a handheld radio "almost" for free.
It was a handheld receiver only (scanner) that covered the 2 meter band
(and the 160 MHz range public service band) for only $5... AND, it even
came with some crystals for the four channels. Unfortunately, none of them
were ham frequencies.

[*** french traduction after english text ***]

This message is crossposted in : alt.radio , alt.radio.scanner ,
alt.radio.scanner.uk , rec.ham-radio , rec.radio , rec.radio.amateur ,
rec.radio.scanner , rec.radio.shortwave , fr.misc.divers ,
REPLY ONLY IN alt.config or/and via e-mail !
REPONDEZ SEULEMENT DANS alt.config ou/et par e-mail .
(sorry for my poor english)

I propose this newsgroup.

I want to create this newsgroup for all the ham-radio and SWL who speak
french (not only in france) and want to speak about radio .

The newsgroup i propose , mustn't be and commercial radio goup .
The subjects may be : the shortwaves (SW), the VHF UHF ... , and somes
others thing how digital , cellular ...
all of the radio (no - commercial) and ham-radio the listeners of course
!
There is a newsgroup named : alt.radio.scanner , but it is in first for the
USA , i want this newsgroup for French speaking .
Yes you can say " why not an fr.* group ?" at this i say you : for an fr.*
newsgroup this is very long and there is a big problem : the law !!

I france the scanners are not illegal but this is illegal to speak about
this (buy it , dont use it), this is legal in all the world !

now the question is :

are you ok for alt.radio.scanner.french

send your replies in alt.config and/or via e-mail
yann.BERENI@hol.fr

FRENCH TEXT

Je propose ce newsgroup .

Je veux creer ce newsgroup pour tout les radio-amateurs et les écouteurs de
radio qui parlent francais (pas seullement en France) et qui veullent
parler de leur passion : la radio .

Le groupe que je propose , ne doit pas etre un newsgroup commercial .
Les sujets peuvent etre : les ondes courtes , la VHF ,UHF , ... et bien
d'autres choses qui font partie de la radio et du radio-amateurisme et
bien sur les ecouteurs !
Il y a deja un group nomme alt.radio.scanner , mais c'est en premier pour
les USA , je veux créer ce newsgroup pour que les francophones puissent
s'exprimer .

Oui vous allez me dire " pourquoi pas un group fr.* ?" a ca je vais vous
repondre que c'est tres long pour creer un group fr.* , et le plus gros
probleme c'est qu'un tel goup sera reffuse en fr.* car il y a la loi !

En france les scanner ne sont pas interdits , mais il est interdit de
parler de ca (achetez mais n'utilisez pas)
Remarquez que c'est legal dans le monde entier !

Maintenant la question est :

etes vous d'accord pour alt.radio.scanner.french

Envoyez vos reponses dans alt.config ou/et via e-mail

**********FAST CASH, IT WORKS!!!**********
Tired of being short of cash all the time? Need some extra money
for savings, rent, bills, etc.??? Just follow this easy plan and
you can be on our way to financial independence! Many people don't
see this as an "Ethical" way of making money, but it is. Most
people will send a dollar or two, because it's not that much to most,
and a dollar WILL go a long way in this plan.

First, get an envelope, address it to the first name on the list.
Put a dollar bill ($1) in it, and a note stating "Please add me to
your list" inside the envelope and seal it. Do the same for all 5.
You should now have 5 envelopes sealed, EACH have a piece of paper AND
a $1 bill stuffed inside of the paper. Make sure those words that were

stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. J. Tolbert, 9710 Tilltree, Houstan,Tx. 77075
2. N.North, 1301 Kingsway Dr. #14, Picayune,Ms. 39466
3. A.Haverstock, 6835 Colleen Drive, Boardman, OH 44512
4. H. Wise , 1939 Laurelwood, Austintown, OH 44515
5. J.H., 7100 Lockwood Blvd., #184 , Youngstown, Oh 44512

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:
Posting with Netscape
1.Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.
2.Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!
3.Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!
Note: These are the original Instructions I read. It is much easier to cut and paste or save the files to your hard drive.
4.When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save you artcle as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.
5.If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .
6.Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.
IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR

YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE IN A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7.That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM.

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please

Note: My strategy uses classified adds through a service provider and newsgroups to link to my web site. You could follow a similar strategy or it could be all newsgroup based. Explaining the details of publishing a web site is beyond the scope of this text.

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!! When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so..... People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the mnewsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL

AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!

**By the way, if you try to decieve people by posting the messages with your name on the list and not sending the money to the people already on the list, you will not get much. Someone I talKed to knew someone who did that and he only made $150 dollars, and that's AFTER seven or eight weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K. THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!! Home

I need a little help here from somebody who knows more than me (which is zero) about radios. I listen to AM radio through a regular Sony amplifier/receiver component. Problem is, I live pretty much in downtown Chicago, so between the buildings blocking signals and all the other radio noise, it's hard to get signals from WTMJ 620 AM in Milwaukee, about 90 miles to the North. I'm a Milwaukee Bucks fan, and I'm pretty excited that we actually have a winning record (13-9!), so I'd like to listen to some games (especially the upcoming Laker game).

So, my question is: what can I do to improve my AM reception? I have an AM radio antenna coil hooked up to the back, but it's just the little cheap antenna that came with the receiver. Any suggestions? I'm not even getting a weak signal -- I'm getting nothing. And the station is very strong, strong enough to receive when I'm on the highway in Chicago.

Please keep it as simple and basic as possible, and don't worry about underestimating my knowledge of radios -- when in doubt, dumb it down.

Thanks!!

My first response is this: I saw the Bucks beat the Celtics the other night in Boston (no great accomplishment) - don't bother. If that game was a representative sample, the Bucks didn't play with any heart and won't for the remainder of the season.

However, there's no accounting for taste so I'll try to answer your question. As I recall, 'TMJ sends out a directional signal. If you are not in the path, there's no hope of picking it up in Chicago. Can you get the signal in your car once you get out of the downtown area? If not, consider "da Bulls" (option B). If you can pick the game up and you still want to do so in your building, then you will need to put up an antenna that goes as high as possible so that the surrounding buildings are less likely to interfere. Can you string a wire to the top of your building? If not, you might want to take a drive to Evanston and listen in your car (Lakeshore Drive is nice this time of year). Also, aren't the Bucks broadcasts syndicated to other stations in WI? What about some (possibly non-directional) station in Racine or Kenosha?

I probably wasn't much help because there really isn't much you can do without spending some big bucks (no pun intended). Take heart - there's always option B.

Try rotating your receiver. The ferrite loopstick antenna on your Sony hi-fi receiver has two "nulls", more or less 180 degrees apart in azimuth, where the antenna won't pick up much signal. If the direction from your location to WTMJ is along the "null", you won't hear much.

Alternatively, try a larger antenna, either by purchasing a "Select-A-Tenna" and connecting it to your receiver, or by purchasing a GE/Thompson Superradio III, which has a very large built-in ferrite loop antenna.

> And the
> station is very strong, strong enough to receive when I'm on the

The typical car radio is far more sensitive than the typical Sony hi-fi receiver. Also, you may well have much less RFI from consumer appliances when on the highway than in your urban apartment.

Regards,
-Steve

Yeah, I guess they must have been bored having to beat the Celtics yet
again this year....

That's probably a good idea to try.

Didn't work too well. In fact, I can barely pick up the Chicago AM
stations too well with my receiver, or even on my clock radio for that
matter. Reception here just sucks.

I think I'll have to try that, thanks.

[snippppppp]

Hi,

Let me start by saying I won't condone what I'm about to suggest, its probably illegal, you decide. I've thought about doing this myself since my lab is back in the corner of a U shaped steel structure building. The only station (AM or FM) I can get comes in badly at best.

How about putting a small, very low power transmitter on the roof (assuming you can receive the station on the roof) and tie it into a receiver tuned to the game (also on the roof). Before the game starts, plant your 'station' on the roof, tune in the game in your living room and remove the transmitter when the game is over. Of course, be sure to find a frequency not in use locally or you might have some company.

I've even seen 'transmitters' sold for playing a CD player thru a car stereo. Plug the CD into the transmitter and tune up the car radio to the same frequency. I bet this could be used with the earphone output of a small FM radio as well. I think the gizmos I'm thinking of cost about $30.

I'm not sure what the 'legal' power limits are for FM transmitters with no license, but I think you are allowed a good fraction of a watt. Then there's the 'legality' of rebroadcasting the game to worry about, not to mention the possibility of living next door to someone who doesn't share your appreciation for the Bucks.

Sounds like you have major RFI noise problems. A larger antenna is
unlikely to help.

Try using a portable AM radio to sniff out noise sources in your
apartment. If you're lucky, the predominant noise source will be something
that you can control, i.e. cut the power to it when you want to listen to
the radio.

Regards,
-Steve

bdzeiler@primenet.com (Brian Zeiler) shared these priceless pearls of wisdom:

->I need a little help here from somebody who knows more than me (which
->is zero) about radios.

Well, hell, MOST of us know zero, but damned few will admit to it.

Consider what you are living inside of IF you knock the bricks and sheetrock off of the walls. You are living inside of a steel girder and tube structure. The problem isn't your Sony, which is every bit as good as your car radio, nor your loopstick antenna, which is every bit as good as the whip sticking out the fender of your car. The basic problem is that you are living inside a pretty doggone good screen shield room and NOTHING (no, zip, nada, zero...) is going to give you good reception inside. It is sort of like making a portable radio play inside an 18-wheeler trailer. Ain't gonna happen.

Liken it if you will to what happens when you drive through a tunnel or across a steel bridge. AM reception goes to hell in a handbasket, doesn't it. It isn't the tunnel or the bridge per se, but the steel wrapping that does it.

To prove it to yourself, take that little Sony of your ownie outside on batteries or a good long extension cord well away from your steel cocoon building, say, 50 feet or so. Try it. Lot more stations, aren't there?

The problem resolves itself into getting an antenna outside of the building. You say your car radio gets good reception of your desired station near your residence hall? It seems to me that a whip antenna sticking outside your window and fed to the antenna input on your Sony would do. How you hide that antenna from your landlord and get the feedthrough wire through the walls or window is a separate problem which we can address in this group WHEN you do the experiment of getting your radio out into your front yard and doing the experiment in the last paragraph.

The Bulls. They play hockey? Or minor league baseball? {;-)

There are also headphone transmitters but they may not have the power.
What about those things that send a signal through the electrical
wiring?

I found the solution -- Real Audio broadcasts! No fuss, no muss. Now
I can hear the Bucks blowing their 11 point lead against the Lakers at
one point to being down by 4 near the end of the 3rd quarter.

Thanks for all the suggestions!

Science, Logic, and the UFO Debate:

Shane, CTCSS tones are usually numbered/identified with a LL (letter
letter) or LN (letter number) type scheme.

Ie: 100.0Hz = 1Z
     123.0Hz = 3Z
     241.8Hz = M6

There are about 42 odd standardized CTCSS tone frequencies. Many CTCSS
encoder/decoder circuits can not deal with more than 32 different tones
- simply because they don't have enough divider/address lines/aka DIP
switches. If your radio is using the above numbers for CTCSS tone
frequencies they could be totally different on another radio. To
confuse the matter some more, there are several non-standard CTCSS tone
frequencies in use too. I find it best to use the full frequency in Hz
just to avoid any possible confusion. Hopefully your encoder/decoder
with be compatible.

The following list will be included in the Jan '97 release of the FAF. Any comments or corrections would be greatly appreciated. (The FAF lists specific U.S. frequencies and channels in various bands of interest to scanner listeners.)

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

CTCSS (PL) Frequencies

Freq (Hz)	Designator EIA	Designator Ham	Freq (Hz)	Designator EIA	Designator Ham	Freq (Hz)	Designator EIA	Designator Ham
67.0	L1	01	110.9	2Z	15	179.9	6B	29
71.9	L2	02	114.8	2A	16	186.2	7Z	30
74.4	WA	03	118.8	2B	17	192.8	7A	31
77.0	L3	04	123.0	3Z	18	203.5	M1	32
79.7	SP	05	127.3	3A	19	206.5	8Z	
82.5	L4	06	131.8	3B	20	210.7	M2	33
85.4	YA	07	136.5	4Z	21	218.1	M3	34
88.5	L4A	08	141.3	4A	22	225.7	M4	35
91.5	ZZ	09	146.2	4B	23	229.1	9Z	
94.8	L5	10	151.4	5Z	24	233.6	M5	36
97.4	ZB	11	156.7	5A	25	241.8	M6	37
100.0	1Z	12	162.2	5B	26	250.3	M7	38
103.5	1A	13	167.9	6Z	27	254.1	OZ	

```
    107.2    1B   14       173.8    6A   28

        Motorola differs from EIA with:  XZ (L1), XA (L2), XB (L3),
    YZ (L4), YB (L4A), ZA (L5). ICOMM does not use 97.4 and uses one
    less than the amateur numbers above that (i.e. ICOM #25 = 162.2).

 The biggest pro is you don't have to learn the code to operate it. The
cons is it range is very limited, seem to run FM only
Happy New Year

Hello to all who read this message.

I am letting you all know that the Burnaby Radio communications WWW page is
now running stable, you should be able to check it out at any time.

Some of you had problems before accessing our WWW page, but that problem should be over now. We have changed servers so our WWW Page should work all
the time now.

The page is at "http://www.burnabyradio.com/ham/brc.html"

We are: Burnaby Radio Communications Ltd.
         4257 E. Hastings Street
         Burnaby, B.C. Canada
         V5C 2J5
      Phone: (604)298-5444
      Fax: (604)298-5455
      BBS: (604)298-3283

WWW: http://www.burnabyradio.com/ham/brc.html

Please visit us!!!

And please fill out our form, and you will receive our latest price list.

Thanks.

Hello:

My wife, Kari, and I wanted to let you know about an opportunity that we

recently became involved with. It is a multi-level marketing business called Strategic Telecom Systems, Inc.

We are new to this type of thing and are not professional network marketers. We are an average, younger, married couple that would like to supplement our regular income without having to go out and work a "regular" part-time job. This opportunity was presented to us by some friends at our church. It is not affiliated with the church in any way.

Like you, I was very hesitant and doubtful at first, but I took the opportunity to listen and was pleasantly suprised to learn that this is a solid and easy to understand business. You may be suprised that I have not been hyping the "BIG!!!" money that you can make in this business. Well, to be honest, you potentially can earn a good income for very little work. But, we are not glitzy and fake type people. It seems to us that that trust is one of the hardest things to develop when dealing over the Internet. We want you to trust us and we believe that good, solid business relationships take time to develop.

We are looking for other people in the USA or Canada who might be interested in earning a larger extra income and working with a nice, honest couple of people. If you want this kind of positive business relationship, then respond to this email and I will fill you in with more details. It costs nothing to get the details.

Scott & Kari

Scanmaster QS-200 clip on holders for hand held scanners, HTs.
Great for use in mobile. These are brand new, sealed in package,
never opened. Sell new at EEB for $14.95 each.

WIll sell for $10.00 each or both for $15.00 shipping included.

E-Mail if interested

Dan

'ronkr@nyc.pipeline.com (Ron Krause)' wrote:
Viacom buys WAXQ

By David Hinckley
Daily News Staff Writer

New York radio rocked and rolled again Friday, with WAXQ (104.3 FM) gettinga new owner - meaning quite possibly a new format - and WHTZ (100.3 FM) replacing its long-time programmer Steve Kingsten.

GAF Corp. sold WAXQ to Entertainment Communications Inc. for $90 million, the most ever for a city FM.

Entertainment Communications then announced it will trade WAXQ to Viacom for three Seattle FM's. Viacom, whose holdings include Blockbuster Video and MTV, thus becomes the latest two-
FM owner in New York, adding WAXQ to WLTW (106.7 FM).

While the deals must be approved by the FCC and Viacom has not announced any plans, one major question is whether it will take WAXQ out of the crowded modern rock field.

Since two-station owners favor formats which compliment each other - like Emmis' WRKS and WQHT or SBS' WSKQ and WPAT-FM - WYNY orphans hope Viacom sees country music as a nice match for Lite-FM. But there are also advocates of classic rock, top-40 and a younger, FM- oriented talk format. Right now it's all speculation.

I have been planning to drive to Dayton but my back is having trouble
at the moment.

If you may have, or have knowledge of the availability, of reasonably
priced air ticket between Phila or BWI, or maybe Newark or DC, and
Dayton, going out Thursday and coming back Sunday, please let me know.

Thanks.

i'm new the world of scanners and had no idea that some freqs are blocked in machines before sold. can someone tell me more about what types, ranges of freqs get blocked.

i just bought a pro-2037, can you tell me what's blocked on it???
don't see anythig in the users manual about this subject.

thanks

Hello Hams and AmRadio Buffs!

I'm a license plate collector, and as always, I'm looking to add some plates to my collection. If you have a plate (or plates) that are just lying around, drop me a line! I'll probably buy it!

I have a pretty good collection going, and some can be seen on my license plate collectors site -
http://users.aol.com/PL8Seditor/queen-b.htm

Hope I hear from you!

(by the way, all butt-kissing aside, many thanks to all the ham operators who have helped me out with my hobby in the past - you guys

(and girls) have been really decent and helpful, and it IS appreciated.

I have a limited number of EF Johnson Fleetcom II UHF rigs for sale.

These are easily converted to repeaters. I can provide the unit 2
ways.

As-Is - $50.00 + $10.00 s&h You do all of the conversion, alignment,
recrystaling, etc. I will provide instructions for the conversion & a
copy of service manual.

Ready-To-Go Repeater $300.00 + $10.00 s&h   Fleetcom II converted to
repeater use, crystaled to your freqs, tuned and aligned, simple
controler w/id. You still need to provide a duplexer, and antenna.
w/manual

These units are all pulled from service and tested & aligned on
468mhz.

I also have a limited number of service manuals for older commercial
equipment. E-Mial your needs and I'll see what I can do.

Other Services available: (All prices + s&h)

Reprogramming of commercial equipment to Amatuer freqs - $35.00
Equipment Repair - $60.00/hr + parts (1/2 hr min, estimate if repair
will take more than 2 hr.)
Custom Cables
'Most anything else your rig might need.

E-mail your needs to:
kproctor@ix.netcom.com

Ready-To-Go Repeater $300.00 + $10.00 s&h   Fleetcom II converted to
repeater use, crystaled to your freqs, tuned and aligned, simple
controler w/id. You still need to provide a duplexer, and antenna.
w/manual

These units are all pulled from service and tested & aligned on
468mhz.

I also have a limited number of service manuals for older commercial

equipment. E-Mial your needs and I'll see what I can do.

Other Services available: (All prices + s&h)

Reprogramming of commercial equipment to Amatuer freqs - $35.00
Equipment Repair - $60.00/hr + parts (1/2 hr min, estimate if repair
will take more than 2 hr.)
Custom Cables
'Most anything else your rig might need.

E-mail your needs to:
kproctor@ix.netcom.com

Hello All,

Will keep it short and to the point. There is a new resource for Ham radio
topics. It is on the web. Come on over and visit
http://www.coronetsec.com/hamradio. All hamradio topics welcome. Hope to
see you there soon.

Jim

I am looking for a set of knobs for a 600-series Zenith Trans-Oceanic
radio. The ones I have have lost all the gold paint, and I need a new
set. The ON-OFF knob has a small flag that covers the "ON" indicator

when the set is off.

Any help appreciated.

Thanks,

Bobby

Hi,
     I am looking for a schematic/service manual for a Microwave
     modules MMT 144/28 transverter. I recently had to sell my
     primary VHF/UHF allmode and need to repair the xverter
     to get back on. I would be happy to pay for reproduction
     and shipping costs. Please E-mail chastain@compunet.net

                         Thanks, Rod. (KD0XX)

I am looking to purchase any old microphones for my collection.
Have a look in the cupboards,ascent up into the attic,ask your neighbor
or have a peek in the storage room and get back to me with
what ever you were able to find.
Looking from mics,stands,flags from
Turner,Sony,RCA,Neumann,Telefunken,Universdal,America,Western Electric
Altec,Shure,Etc.
Let me know,thanks for your time and I'm looking forward to your reply,
Thanks

Interesting spelling on the name. That would be "Rothschild". What a
maroon. Is your real name Arayan Butthead, by any chance?

Dave Braun

This obviously was not written by a Jew
If it was he would have capitalized the proper noun Jew
Just another schmuck wanna be!!

For what? Constitutionally protected free speech?
--
Fixing used Volvos is probably easier and more fun than
trying to get Abe Lincoln re-admitted to Pat Buchanan's
party [the Republican Party].

I don't see what the big deal is. He is simply making fun of the ignorant
stereotypes about Jewish people, perpetrated by white racist groups and
the fools who follow that idiot Farakan (SP?).

My friend you are a Jew and you have a responsibility to uphold. By sending such letters you are causing offence to your people and the GOD you serve. Remember the Tanakh states, salvation comes to the Gentiles through the Jews, you are a light to the Gentiles. Stop dragging people sown and boasting. You are in covenant with YHWH, the God who desires the Gentiles to also be in covenant with Him, this is asloi clearly written in the Tanakh. My friend stop bragging pride comes before a fall. Your job as a Jew is to seek out and save the lost and bring them back to God in fellowship with Him, not foolish boasting.

The big deal is that this kind of racism has to be stopped or it gets
out of hand. Remember, it's just this kind of rubbish that was spread in
Germany before World War II. A lot of the intellectuals in Germany just
laughed it off, saying that "No one could take that seriously".
Unfortunately, as history shows us, they were sadly mistaken.

I just picked up a Heathkit HL-2200 amplifier. It came with the manual.
The manual is missing the fold out schematic. Does anybody know where I
can get a copy of the schematic.

Thanks
ET

The New World Order
Off to a Shaky Start

As 1991 dawned, people were optimistic. The Cold War was over. True, there was the problem of Kuwait, which had been invaded by Iraq the previous August. But the United Nations had flexed it's muscles and ordered Iraq to withdraw by January 15. The demand was being backed up by a 28-nation UN military coalition that had quickly been organized and that was poised to force Iraq into submission. Hopes were running high that the tough stand taken by the world community signaled the biginning of a new era. George Bush, then U.S. president, spoke about "the possibility, for ourselves and for generations to come, of forging a new world order, a world in which the rule of law of the jungle, governs international behaviour". Iraq sebsequently ignored the January 15 deadline, and massive air ad missile strikes against Iraqi military targets resulted. Clearly, the world community meant business. Less than three months later, on April 11, the UN declared the Gulf War over. The promise of a peaceful, economically to be acquiring real substance.

Wars Distressingly Stable

In mid-1991 two republics, Slovenia and Croatia, declared independence from the Yugoslavia of that time, setting off a civil war that eventually led to the formation of several separate nations. Less than a year later, French political analyst Pierre Hassner said: "Like pre-1914 Europe, the new world order of George Bush died in Sarajevo." Nevertheless, the outlook for peace brightened when talks opened in Dayton,Ohio, in November 1995 and a peace

agreement was signed in Paris on December 14. As 1995 drew to a close, hope
was revived that the new world order was perhaps not dead after all.

The republics of the Union of Soviet Socialist Repubilics were inching away
from one another. In 1991, Lithuania, Estonia, and Latvia were the first to
go, quickly followed by others. A loose grouping known as the Commonwealth
of Independent States was establich in December, although some former
members of the Soviet Union refused to join. Then, on December 25, Gorbachev
resigned as Soviet president.

However, even the individual republics began unraveling. For example,
Chechnya, a small Muslim enclave in the northen Caucasus region of Russia,
was striving for independence. Its attempt at secession at the end of 1994
sparked a controvesial attack by Russian troops. Even though some 30,000
lives have been lost since the crisis began in the early 1990's, the warfare
has continued on into this year.

As of October 1995, between 27 and 46 conflicts--depending on how they are
classified--were raging throughout the world.

On the Verge of Bankruptcy

At the start of the 1990's, the new world order was turning out to be not
only politically shaky but economically shaky as well.

In 1991, Nicaragua devalued its currency, but even then, 25 million cordobas
was worth only one U.S. dollar. Meanwhile, Zaire was experiencing an
inflation rate of 850 percent, forcin its citizens to endur one of the
lowest living standars in the world. The Russian economy was also suffering.
Inflation was running at 2,200 percent a year in 1992, making money almost
worthless. Though things subsequently improved, in 1995 economic problems
were far from over.

The financial scandal of the century occurred in 1991, when the Bank of
Credit & Commerce International collapsed, brought down by fraud and
criminal activities. Depositors in 62 lands suffered losses amounting to
billions of U.S. dollars.

Not jus economically weak nations were reeling; mightly Germany was weighed
down by the costs of unification. Unemployment rose as workers demanded
longer vacations and better health care. High absenteeism and widespread
abuses of the welfare system put additional strains on the economy.

In the United States, a string of severe disasters caused havoc among

insurance companies, who found themselves hard-pressed to pay insurance claims. And in 1993 the book Bankruptcy 1995; The coming collapse of america and how to stop it warned of the dangers os a skyrocketing national debt and budget deficit. Even the Rock-of-Gibraltar stability of British insurer Lloyd's of London was called into question. Battered by losses, it was being forced to think about the unthinkable--possible bankruptcy.

Religion, a Stabilizing Force?

In 1991 the German daily Frankfurter Allgemeine Zeitung remarked: "This vision of a new world order comes in a long tradition of American global views all of which have had a religious kernel and have been couched in Cristian terms."

This religious background, one would think, should have added stability to the new world order. But in actuality religious intolerance and strife led to widespread instability. Algeria and Egypt were onlh two several governments at odds, with Islamic fundamentalists. A wave of religiously motivated terrorism struck both countries. Religious riots in India included a nine-day period of sectarian violence in Bombay during 1993 that took more than 550 lives.

Religious disunity slowed ecumenical progress in 1994 when the Anglican Church ordained 32 women as priest. Pope John Paul II called this "a profound obstacle to every hope of reunion between the Catholic Church and the Anglican communion."

On April 19, 1993, tension between the U.S. government and members of a religious cult, the Branch Davidians wich had already resulted in a standoff at the cult compound in Waco, Texas, and the killing of four federal agents claimed the lives of at least 75 cult members. Two years later investigations were being made into the possibility that the terrorist bombing that killed 168 persons at a federal building in Oklahoma City might be in retaliation for the Waco attack.

The world was shocked in early 1995 to hear of a terrorist poison-gas attack in the Tokyo subway system. Ten persons died, and thousands more were sickened. The world was even more shocked when resposibility was laid at the doorstep of the apocalyptic sect called Aum Shinrikyo, or Aum Supreme Truth.

Significant Anniversaries with little to celebrate

In 1492, Columbus stumbled upon the Western Hemisphere. The 1992 celebration of the 500th anniversary of this event was shrouded in controversy. Some 40 million descendants of American Indians bristled at the implication that a European "discovered" lands where their ancestors had lived and flourish long before he was even born. Some called the explorer "a precursor of exploitation and conquest." And for a fact, Columbus' arrival in the Western Hemisphere was more a disaster than a blessing for its indigenous inhabitants. So-called Christians conqueres robbed them of their land, soverieignty, dignity, and lives.

In September 1995, Israel began a 16-month-long celebration to commemorate the 3,000th anniversary of King David's conquest of Jerusalem. But the anniversary got off to a tragic start when Prime Minister Yitzhak Rabin was struck down on November 4 by an assassin's bullets minutes after addressing a peace rally. This cast shadow on the Middle East peace process, demonstrating that serious religious differences exist not only between Jews and Palestinians but even among Jews themselves.

Several 50-year anniversaries were celebrated between 1991 and 1995 in connection with World War I--the Peral Harbor attack, which led to the entry of the United States into the was; the invasion of Europe by the Allies; the liberation of Nazi concentration camps; the Allied victory in Europe; and the dropping of the first atom bomb on Japan. In view of the blood and tears associated with these events, some people asked if they were really worth celebrating.

This led up to the anniversary of another significant event, the founding of the United Nations organizations in October 1945. Hopes then ran high that the key to achieving world peace had at last been found.

The United Nations, as Boutros Boutros-Ghali, its secretary-general, recently said in its defense, has scored many triumphs. But it has not succeeded in fulfilling its charter purpose, namely "to maintain international peace and security." Often its troops have tried to maintain peace in laces where there was no peace to maintain. As of 1995, it had failed to breathe life into a shaky new world order.

As the New World Order Floundered, True Theocracy Frourished!

In view of the political, economic, and religious instabililty that caused their vision of a new world order to disintegrate before their very eyes, some people began speaking of a new world disorder. In this development Jehovah's Witnesses saw further proof that only a new world of God's

manking
will enjoy stability in human society.

In some countries the end of the Cold War meant greater freedom for Jehovah's Witnesses, allowing them to hold outstanding international conventions in Budapest, Kiev, Moscow, Prague, St. Petersburg, Warsaw, and elsewhere. These strengthened the worldwide congregational arrangement of Jehovah's Witnesses and helped speed up their preaching work. Thus, it is not suprising that the number of active Witnesses in just one of these areas
grew from 49,171 in 1991 to 153,361 in 1995. During the same four years, the
number of Witnesses in the entire world grew from 4,278,820 to 5,199,895. True theocracy is flourishing as never before!

Yes, millions of people now base their hopes for the future upon Jehovah God's promise of "new haveans and a new earth" in which "righteousness is to
dwell." (2 Peter 3:10,13) How much wiser than looking to a human new world order, which, off to a shaky start, will shortly be shaken into nonesistence!----Daniel 2:44.
